## The Year's Most Complete Source

These extensive, detailed listing pages of the  
Annual Production Review provide the buyer  
with names, videotaping and other audiovisual com-  
munications services with the most reliable and  
complete data source to experienced producers in  
the United States, Canada and abroad. Months  
of editorial research, based on open invitation to  
specializing companies able to meet our mini-  
mum listing standards or recognized for proven  
quality, went into the compilation of these pages.  
The buyer can depend on the data provided as  
the first step in successful procurement of services.

## PRODUCERS IN FRANCE

### LES ANALYSES

#### CINEMATOGRAPHIQUES

15 Avenue de Segur, Paris, France

Phone: 705-84-20 +

Date of Organization: 1947

Georges Roze, *General Manager*

Jean Vincent, *Edition & Equipment Mgr.*

Robert Arquier, *Production Manager*

Gerald Bagneres, *Sales Manager*

Yvette Roze, *Office Manager*

SERVICES & FACILITIES: Department Production and Realization. Documentaries, industrial and sales promotion films, 16mm and 35mm and filmstrips. Department Ultra-Révéli: Studios (high speed Kodak camera, Department Fin). Editing, titles, effects, synchronization, dubbing (cutting rooms, projection rooms). Department Equipment: Authorized dealer for Bell & Howell. Department Edition, Diffusion and sale of set-training and human relations films.

RECENT PRODUCTIONS AND SPONSORS  
MOTION PICTURES: *Les Clics sont ce Qu'ils ont* (Credit Industr. & C. Bank); *L'Altion Dne Safer* (Ministry of Agriculture); *Calculates Electroniques* (Delegation Generale Rech. Scientifique); *Air Pur* (Projesme de la Seine); *Vedettes en Couffées* (Aznavour Petula Clark).

**When you put your best salesmen on film, or your best workers, or your ablest instructors, don't stop there. Make sure your presentations are just as good as the films and slides you plan to show. Show them on Kodak equipment:**

**KODAK PAGEANT 16mm Sound Projector, Model AV-126-TR.** Its fully transistorized, high-fidelity sound system may never need repairs. Choice of 12-watt or 25-watt amplifier. Perfectly matched speaker gives superb sound quality. Simple controls. Exceptionally gentle film handling. (The best 16mm projector buy under \$8,725—and we make that one, too!)

**KODAK CAROUSEL AV-900 Slide Projector.** Jamproof slide tray holds 80 slides of any thickness up to 1/8 inch. This means longer showings without interruption. Trays can be changed in seconds. Instant access to slides for editing or interchanging. Gravity

feed prevents jamming. Slides can be shown by remote control, manual control, or fully automatically. For additional showmanship, this projector is equipped to work with the **KODAK CAROUSEL Dissolve Control** and with the **CAROUSEL Programmer** that synchronizes taped sound with the slides.

For a complete listing and detailed descriptions of other Kodak equipment for making and showing audiovisual material, write for a copy of our free booklet "Audiovisuals in Business and Industry." Information, including a detailed bibliography,

will suggest when and how to use audiovisuals profitably in your business. Just use the coupon.

# ARRIFLEX 35

MODEL  
2C

but  
very  
heavy  
in  
performance!

## NEW reflex viewing system

- \_\_\_\_\_ larger field
- \_\_\_\_\_ divisible finder
- \_\_\_\_\_ interchangeable ground glass

Filming jobs break fast these days—demand the best equipment. Good reason to check out the new Arriflex 35 2C. Pick it up, heft it. This one has the right feel—and at no more than 13 lbs! Makes for hours of effortless filming—studio or location, on the run or in the crowd.

And now a completely new reflex viewing system on the model 2C camera provides the cameraman with significant filming advantages. More reason than ever why Arriflex is the undisputed favorite when the action really counts.

A new larger, brighter field (868 x .735 — 2.35:1 Scope aspect ratio) makes exact framing and precise focusing easier than ever. A new divisible finder provides for interchangeable eyecup with correction lens mount, detachable eyepiece, and accepts periscope finder attachment. A new interchangeable ground glass system permits the cameraman to make changes himself—quickly and on the spot. A series of ground glasses are available with industry's standard markings.

The basic features of the Arriflex 35 are retained. The famous Arriflex cardioid film movement, mirror-shutter and precision film gate remain the heart of the new model 2C cameras—continued assurance of proven theatre-quality footage.

You couldn't choose a better time to select an Arriflex 35 for your next assignment. You'll find the new model 2C a tool of extraordinary capability—a revelation in versatility, handling ease and economy of operation.

# ONLY FROM CINE 60 this exclusive rechargeable POWER BELT

\$256.00

- Cine 60 offers you the most advanced concept in battery design. The rechargeable GE nickel cadmium battery
    - These powerful completely sealed battery cells are built into a handsome easy to wear belt for greatest comfort and mobility
    - No awkward battery case to get in your way, no bulky weight tugging at your shoulder
    - A special designed, built in charger plugged into any 115 volt AC outlet will recharge your battery safely
    - EXTRA NEW FEATURE! To protect battery and camera motor from damage in case of a short circuit, an automatic overload switch is built into the belt system. This switch functions as an automatic fuse which will reset automatically and will never have to be replaced
    - Power Belt 8.4 volt for Arri 16
    - Power Belt 16.8 volt for Arri 35
    - The 16.8 volt power belt is also equipped with a selector switch which permits tapping the battery at 8.4 volt for use of Arri 16 camera with a capacity of 7 amp. hour
    - Also available for Eclair 16 camera and others
    - New! Available now for the first time.
- Stretch powercables for all model Arriflex Cameras. Retracted length 11" as illustrated. Stretches to 6'

#### CINE 60 LW BLIMP FOR ARRI 16-S

Hi-impact plastic. Weight 12 lbs. Use with 8V constant speed or 115V sync motor. Use with sync signal generator. Lens follow focus from outside. f-stops visible from outside. May be hand held using shoulder brace.

\$960.00

#### ZOOM MOTOR DRIVE

For Angieneuve 12-120 mm zoom lens. Powered by 3.6-volt rechargeable nicklecadmium cells. Hand unit has built-in charger, zoom direction and speed controls.

\$245.00

#### POWER BELT FOR SUN GUNS

A new member of our growing family of power packs. Designed to operate all Sun Guns requiring 30 volts. Has rechargeable G-E nicklecadmium batteries, built-in charger.

\$298.00

#### NEW EXCLUSIVE "UNIVERSAL" POWER PACK

For Arri 16's, S, M or BL. Screw and socket mount attaches battery to camera. Battery & camera become one unit. For tripod, shoulder pod or hand held shooting. GE nickel-cadmium batteries, built-in recharger, overload circuit breaker. 8.4V.

\$165.00

#### CINE 60-PRENZEL SHOULDER POD

A unique double-shoulder tripod that can be used with all conventional cameras having 1/4 in. or 3/8 in. base socket. Affords complete mobility, leaving both hands free for handling camera and accessories.

\$96.00

**CINE 60 — FIRST in Sales, Service, Rentals, Repairs.**

UTMOST PROTECTION  
assured by*

# P-D FILMPACK

*Only* SIGNIFICANT IMPROVEMENT in FILM PACKAGING

*Now,* following rigorous laboratory tests under official testing regulations (versus competitive containers) FILMPACK assures absolute security to reel and film against shipping, storage and handling hazards.

## *Reduces Costs 5 Ways*

1. Labor—opens or closes in 4 seconds.
2. Shipping—luggage-strength lightweight plastic saves FREIGHT.
3. Long Life—FILMPACK replaces and outlasts cans and fibreboard shippers.
4. Storage—flat surface, ease of handling and NO STRAP design saves up to 25% space.
5. Film Spoilage—provides positive PROTECTION against moisture, humidity, temperature and dust.

*Evaluate* FILMPACK for yourself.

**IMPROVE and STIMULATE YOUR SALESMEN WITH THESE ALL-COLOR ART SOUND SLIDEFILMS . . .**

More than 20 sales managers selected the professional selling techniques presented in this Speaking-of-Selling Program. All techniques are practical, believable, and interestingly demonstrated. This is a Program designed to improve existing sales organizations, especially those marketing business and industrial products and services. Each film is 10 minutes in length, has a Meeting Leader's Guide and a Plan of Action to get immediate sales results.

**Noted Personalities to Appear**  
at National Conference in June  
☆ National Conference program plans are materializing in fine style. Several prominent personalities have agreed to make lecture and discussion appearances. Among them are Gene Fowler, Jr., outstanding Hollywood editor; George Pal, noted producer of animated cartoons and short subjects; Dan McGovern, popular member of the Air Force at Edwards Air Force Base; and Joseph Mascelli, Editor of the ASC Cinematographer's Manual, well-known cinematographer, and author of "The Five C's of Cinematography".

A "Cineposium" — a panel show produced for Educational Television wherein motion pictures are screened and then discussed — is also scheduled for one session of the conference.

Bob Dickenson of Magnasync Corp., Convention Exhibit Chairman, says that more than 20 exhibit booths have been spoken for to date. Some well-known companies who have never before exhibited at the IFPA convention have requested space.

**Palmer Talks on Pre-Production Planning at Cinema Workshop**

☆ IFPA headquarters have been buzzing with various activities over the past six to eight weeks in connection with the upcoming National Conference and the co-sponsorship of the University of Southern California Department of Cinema workshop series.

The USC workshop got underway on February 9th with a lecture by Charles "Cap" Palmer, President of Parthenon Pictures, on pre-production planning — the role of the producer and sponsor.

Roy L. Deets, IFPA Editorial Vice-President, was invited by Herbert E. Farmer, Course Coordinator and Assistant Head of the Department of Cinema of USC, and Donald Perrin, Chairman of the SMPTE Education Committee and also on the USC Cinema staff, to make his second appearance as a lecturer on these series. He will follow "Cap" Palmer and talk on scriptwriting for business and industry. The course continues through May 25th at the University.

**Time to Confirm Reservations!**

☆ Better make your reservation at the Miramar in Santa Monica for those impending June 2-4th National Conference dates.

**INDUSTRY FILM PRODUCERS ASSOCIATION, INC.**

San Diego hears about Sealab II underwater project: at head table (l to r) chairman Mike Reese; Aquanaut Jay D. Skidmore (standing); Roy L. Deets, editorial vice-president of IFPA, Elaine Dolnick, recording secretary and Conference chairman; and Paul DeMello, financial vice-president.

**Sea Lab Aquanaut on San Diego's Program**

The January meeting of the San Diego Chapter presented films and a discussion of the recent Sea Lab II underwater experiments conducted recently off the coast of La Jolla, California.

Jay D. Skidmore, one of the aquanauts, was the guest speaker. Also attending the meeting were three representatives from IFPA's National Office in Los Angeles: Elaine Dolnick, Recording Secretary; Paul DeMello, Financial Vice President; and Roy L. Deets, Editorial Vice President. (See photo)

Mr. Skidmore related many interesting experiences undergone by the aquanauts as they lived as much as 45 days at a depth of

250 feet below the surface of the waters off La Jolla.

Most interesting to the filmmakers in the audience were his descriptions of the problems of loading film in motion picture camera magazines within a changing bag when the temperatures were running at 92 degrees with a humidity of approximately 90 percent!

Fighting was also a big problem at those depths. Even with an ASA 200 film and four special-designed underwater quartz lights, it was nearly impossible to get enough light to photograph at a distance greater than 10 or 15 feet. Sometimes, even this short

## Mascelli, George Stoney at San Francisco

The January meeting of the San Francisco Chapter was honored with a visit and lecture by the noted cinematographer-writer, Mr. Joseph V. Mascelli, A.S.C., editor of the A.S.C. "Cinematographers Manual".

A fluent speaker who knows how to keep an audience entertained while imparting highly technical information, Mascelli discussed with the San Francisco filmmakers the principles of motion picture photography as so explicitly detailed in his recent book: "The Five C's of Cinematography."

National conference opens June 2!

### Documentary Film Maker, Aide Discuss Technique With Chapter

The November IFPA meeting featured George Stoney, well-known maker of sponsored films and William Godsey, assistant to Mr. Stoney, in a discussion of their techniques for adding that "extra something" that lifts a sponsored film from the run of the mill to a moving human document.

Mr. Stoney produced the noted training film for Southern midwives, *All My Babies*, on a commission for the Georgia State Department of Health, and has recently completed the second in a series of four films concerned with

William Godsey and George Stoney (at left and right) addressed meeting of the San Francisco Chapter.

the problems encountered by law enforcement officers.

This film, *The Mask* — which deals with the problem of alcoholism — was shown to IFPA members during the meeting.

Prior to this screening, San Francisco Chapter Chairman, I. Vin Agar, introduced Mrs. Elaine Dolnick, IFPA National Recording Secretary and Conference Coordinator.

Elaine told the local members of the plans for the coming convention at Santa Monica June 2-4, including the many interesting events to be scheduled for the wives of visiting IFPA members at the conference.

\* \* \*

**Ray Jewell's Film of "Yankee"**  
Featured on a CBS-TV Program  
Ray Jewell, Publicity Chairman of the Los Angeles Chapter of IFPA, had a film which he has directed and photographed aired over the CBS Network on February 11th.

The film, *Voyage of the Brigantine YANKEE*, dealt with the round-the-world voyages of the famed square-rigged sailing ship. It was produced by the National Geographic Society in association with David L. Wolper Productions.

Jewell, who is currently producing and directing films for the U.S. Air Force at Lookout Mountain, California, served as special cinematographer for two years for Capt. Irving M. Johnson, owner of the YANKEE, during the exciting cruise.

Another film short based on this same trip, *Mariners Ahoy*, was filmed and directed by Ray Jewell for Warner Brothers.

\* \* \*

**Mount Everest Film Wins an Award at Trento Film Festival**

Norman G. Dyhrenfurth, noted explorer and filmmaker, recently won an award for his Mount Everest climb film at the Trento Film Festival in Italy despite the fact that, by mistake, all the TV commercials which were inserted

Aquanaut Jay D. Skidmore, a guest of San Diego Chapter

distance was impossible because of the sediment in the water.

However, the pictures shown by Mr. Skidmore at the meeting were very good for the circumstances involved. A regular release film of the Sea Lab experiment is now in editorial and production phases.

\* \* \*

### 12 Active, Sustaining Members Added to Association's Roster

Ten new active members and two sustaining members have joined IFPA since our last JOURNAL column. The active members are: Jerry L. Kalman, Santa Monica; Robert "Bob" Dickenson, La Canada; Walt Hoffman, Van Nuys; James F. Vormelker, Anaheim; Roy L. Low, Los Angeles; Emerson Shaw, Los Gatos; James Smith, San Francisco; Bess Brady, Sacramento; David Geeting, San Francisco; and Samuel Orr, Linwood, Pa.

The Sustaining Members are Photo Equipment Co. of North Hollywood and Telefilm, Inc. of Hollywood.

\* \* \*

### Western Electronics Conference to Have Science Film Theatre

The Western Electronics Conference (WESCON) has requested IFPA to organize and supervise their "Science Film Theatre" presentations during the upcoming WESCON Annual Conference on August 23-26, 1966.

All IFPA regular and sustaining members will receive particulars on this event at an early date.

\* \* \*

### Dyrenfurth in Hitchcock Movie

Harald Dyrenfurth, National President of IFPA, did a two-week stint as an actor in the current Alfred Hitchcock production: *The Long Goodbye*, starring Julie Andrews and Paul Newman, at Universal Pictures.

## Leadership Profile: Meet Michael Reese, Jr.

IN THIS ISSUE we get better acquainted with the energetic and hard-working Chairman of the San Diego Chapter of IFPA, Michael J. Reese, Jr.

"Mike" — as he is affectionately called by his friends — is a native of Fort Worth, Texas. The details are not disclosed, but it was not long ago.

He came to photography by a hasty decision, brought on when he joined the Navy in 1951. There he was given the choice of making his way in the Navy as a radar technician or getting involved in photography. Mike chose photography and the Navy sent him through a rigorous photographic and motion picture schools.

During his nine-year hitch, Mr. Reese was for awhile in charge of the photo lab of the Naval Postgraduate School in Monterey, California. He served in the Korean War as a member of the Amateur Camera Group.

Mike's Navy days found him working in all types of surface vessels and submarines as a staff photographer. But the Navy didn't keep him on the water all of the time. He also got in many hours as an aerial photographer and as a circuit TV cameraman, fly-

ing in every type of plane utilized by the Navy. Most of this military career was spent in Asia and its surrounding waters.

Then, like so many Navy personnel, when it came time for

Michael J. Reese, Jr.

discharge and return to civilian occupations, Mike settled down in San Diego, California.

He went to work in the motion picture department of General Dynamics/Convair, where for the past five years he has served as a Photographic Specialist. Here too, Mike broadened his travel experiences through the utilization of all types of vehicles from blimps to helicopters and back to boats while shooting and directing motion pictures.

As a matter of fact, when one looks at — or hears about — the career of Mike Reese, it is inevitable that you reach the conclusion that photography has made Mike an authority and connoisseur of the various modes and methods of locomotion. Also a top-notch motion picture cameraman and director.

Mr. Reese's motion picture experience has not been confined to military and industrial phases. He has worked on a film for Warner Brothers, and has done many TV commercials.

Through his direction during the past year, the San Diego IFPA Chapter has grown considerably. He has also driven up from San Diego (and back in the same night) to attend many of the Los Angeles Chapter meetings. Additionally, whenever called upon, Mike has given much of his time and advice to the National Board

Alliance physician William A. McCrea teaches son Bruce to operate tractor in "Time . . . and a Place to Grow" featured on this page.

**A** 26-MINUTE DOCUMENTARY motion picture depicting the actual experiences of three families in Alliance, Ohio, who have been aided or influenced by their life and health insurance policies, has been released by the joint sponsors, the Institute of Life Insurance and the Health Insurance Institute.

The film entitled *Time . . . and a Place to Grow*, was produced by Vision Associates, New York, and photographed in the streets and homes of Alliance, and in the City Hospital and one of the elementary schools. It demonstrates how life and health insurance payments are helping three families build financial security for themselves.

#### Families in Real Life Roles

The families, all of whom portray themselves in the film, were selected with the help of C. Ted Ermlich, a district manager of the Ohio National Life Insurance Company, who also appears in the film. He comments on the role life and health insurance plays in the lives of each family.

The first sequence screens the family of Mrs. Eldon Biery, recently widowed, who is financially able to carry on, for the time being, because of the life insurance owned by her late husband. The educational aspirations of her three boys are vividly portrayed.

In the second sequence, the family of Mr. and Mrs. Leland East are shown in a crisis caused by Mr. East's hospitalization, but alleviated by the assistance of health insurance payments over this difficult period.

The family of Dr. and Mrs. William McCrea are shown as typical of a self-reliant American family where the father has fully provided for their financial future, and has passed this philosophy on to the children.

The motion picture was directed by Lee R. Bobker of Vision Associates and is narrated by Alex-

## Insuring the Future of America's Family

### Insurance Institutes Sponsor "Time . . . and a Place to Grow"

ander Scourby. An original "folk song" composed for the film is sung by Judy Collins, folk singer.

Dr. Harlan B. Miller, Educational Director of the Institute of Life Insurance, said, at a recent New York premiere, that the film was very purposefully made in black and white rather than color, because he feels that black and white documentaries are more believable.

Informality, low key lighting and the skillful use of hand-held cameras also were used to create the effect of real life rather than "play-acting." This is a mood film with many poetic qualities; it is not meant to teach or pass along "hard" information, but to motivate — to create an awareness of

the part life insurance should play in family management.

#### Serves Schools and the Public

*Time . . . and a Place to Grow* was produced in response to requests from schools offering personal insurance as a course of instruction, and from community groups which have expressed interest in materials that help generate discussions in family money management. It is designed to replace a classic I.L.I. film of 1948 — *For Some Must Watch*.

The film can be purchased by life insurance companies of life underwriters' associations at cost, \$75. The film will also be available on a free loan basis some months from now through the nationwide facilities of Association

Leland East's family was spared from financial disaster as he recovers in Alliance City Hospital (see story on page 204).

Films and Modern Talking Picture Service, Distribution to TV stations will be handled by Association Films.

### "Smoke, Anyone?" Shows Teen Viewers How This Habit Can Kill

The fact that a million students now in high school will eventually die of lung cancer due to smoking is dramatized in a new film, *Smoke, Anyone?* Produced for junior and senior high schools, the 10-minute color motion picture combines live action and animation. It is available for purchase from the Center for Mass Communication of Columbia University Press.

The film urges teenagers to consider the facts before starting a lifetime habit that is the most important cause of chronic bronchitis, coronary heart disease and lung cancer. Appealing to the young person's ambitions, circle for independence and ability to make mature decisions, it helps him distinguish between the advertised sensations and sophisticated notions of smoking and the unrelenting truth.

*Smoke, Anyone?* uses a restrained, understated technique that concentrates on visual emphasis. A portion of the film is devoted to an animated view of the effect of smoking on the air passage of the lungs.

\* \* \*

## We process filmstrips, too.

In fact, for 16 years, we've been doing nothing else except perhaps for some slide duplicating work now and then. Here, on Long Island Sound about 30 minutes from mid town New York, we have managed to design and build our own printers and processors and to sign on a capable crew who, above all, care about shooting your master negatives and processing your release prints.

For price, technical or delivery information, please telephone, write or come out and visit any time you're in the neighborhood.

### 35 Top College Football Plays of 1965 in New Du Pont Film

A 15-minute film which shows and discusses 33 top plays executed during the 1965 collegiate football season. The film was produced by Du Pont Photo Products Department for the National Collegiate Athletic Association.

The film is available free to NCAA members through National Collegiate Film Services, 133 W. Chicago Ave., Chicago 60601. DuPont meets other requests.

# Sketchbook of Julius Wile's Product Line

## Art and Tele Picture Gives Inspirational "Lift" to Salesmen

SALESMEN OF THE Julius Wile line of imported wines and spirits were given an exciting background look at their own sales in a new film, *The Sketchbook of the Wonderful World of Julius Wile*, released for use in important November sales efforts.

The film is an inspirational supplement to printed material in each salesman's kit. Cleverly tied in

Still from Wile "Sketchbook" scene.

In the firm's new advertising campaigns, it shows how each product in the line enhances the reputation of the House of Wile, identified with discriminating means since 1877.

The film, produced by Wile, Inc., New York, which has been associated with Julius Wile in previous successful films, is a slick blend of live photography and art to demonstrate the quality of each of the Wile products such as Peter Dawson Scotch Whisky, Pimm's Cup, and London Club.

Other notable settings illustrate Wile standouts as Dry Sack, Antinori Italian wines, Rhine Rhines and Moselles, Benedictine and Bollinger champagne.

Credits for the colorful new film go to Woody Siegel, who wrote

and co-directed; Ed Boughton, who also co-directed, and edited; Stan Popko for art; Martin Thall for settings. The lively, tuneful musical score was created by Bob Velazco of Musifex.

Julius Wile has found the new film to be so effective its use has been continued after the holiday season; it is now being used for sales training and indoctrination of new personnel.

### Exciting New Goodyear Film on Craig Breedlove's "Wildest Ride"

★ *The Wildest Ride*, a motion picture account of Craig Breedlove's assault on the 500-mph speed record that came precariously close to being "the last ride," was shown to 11,431,418 viewers on 263 telecasts during 1965 according to the distributor, Modern Talking Picture Service, Inc.

*The Wildest Ride* was filmed on the Bonneville Salt Flats in Utah and was produced for the Goodyear Tire & Rubber Company by Sportlite News. The 13½ minute film shows how Breedlove's jet racer was clocked at a record 526.28 mph only to run out of control at the end of the course. The three-wheeled racer subsequently sped four miles beyond the end of the track, shattered two utility poles, jumped an earthen dike and came to rest in an 18 foot deep pool of water. Breedlove escaped without injury and went on to achieve a record 600.601 mph, driving a new four wheel jet racer later in the year.

According to an announcement from the Goodyear Tire & Rubber Company, one of the sponsors of the trial, the filmed account of Breedlove's latest accomplishment is now in production.

"The Forth Road Bridge" award winner at 6th Intl. Film Festival.

**Business Screen Has Print of Prize Film "Forth Road Bridge"**

The award-winning motion picture, *The Forth Road Bridge*, is being circulated to special audiences throughout the U. S. by BUSINESS SCREEN. The film won top honors in its category at the 6th International Industrial Film Festival in Rouen, France last fall and also received the International Press award of the Festival.

Sponsored by Shell-Mex and British Petroleum Ltd. and produced by Random Film Productions Ltd., this British color film tells the story of one of that country's most important civil engineering projects, the building of the huge bridge over the Firth of Forth. Its scenes capture all the grandeur and excitement of a magnificent feat.

First U. S. showings include its presentation at the recent Calvin Workshop in Kansas City, attended by 757 guests. The print is scheduled for showing at the Smithsonian Institution, Washington, D. C. and at national meetings of the Industrial Audio-Visual Association, the Industry Film Producers' Conference and at a special meeting of the Chicago Film Council.

Arrangements for booking, at no cost except transportation, may be made by letter to the publisher, BUSINESS SCREEN, 7064 Sheridan Road, Chicago, Illinois 60626. •

**Idaho Cinematographers Form a State Group to Improve Product**

A new motion picture group, the Professional Idaho Cinematographers, has been formed in that state. **The Wide, Wide World of Sponsored Films**

**Bureau of Mines Reports Record Number of 1965 Film Showings**

Four thousand additional showings of Bureau of Mines' films were recorded during 1965. The Graphic Services' office of the Bureau at Pittsburgh, Pa. reported 194,736 showings to over nine million persons during the past year. Additional millions saw the motion pictures on public service telecasts. The Bureau did not report estimated viewership.

Nine of the films surpassed their previous records for number of showings. Top rank went to *California and Its Natural Resources* which had 14,432 showings, closely followed by *Copper, The Oldest Modern Metal* with 12,934 shipments; *The Petrified River* (12,677); *The Magic of Sulphur* (11,

289); *Washington and Its Natural Resources* (10,620); and *Alaska and Its Natural Resources* (10,165). Three of these top six titles are in the Bureau's widely-shown State-resource picture group.

Three new productions were completed last year, *Helium; Aluminum, Metal of Many Faces* and a third title which is an entirely new version of *Arizona and Its Natural Resources*. All of the Bureau's films are cooperatively sponsored by private firms and industrial organizations are supplied to eligible groups on a free-loan basis.

For an updated catalog containing a list of cooperating distribution centers write Graphic Services, Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213. •

New York's skyline provides take-off and return point for Greyhound.

**"Discover Greyhound America" Promotes Travel in the U.S.**

☆ Introduced by Vice-President Hubert Humphrey, a 10-minute color film is taking viewers on a tour of the United States. Showing in theaters, on television and to club groups is *Discover Greyhound America*, sponsored by the Greyhound Corporation and produced by the Fred A. Niles Communications Centers, Inc.

Aiding the government's "Discover America" program as it takes onlookers from New York to the Pacific West Coast, the film is an extended version of an original 35mm CinemaScope production produced by Niles for the Greyhound Pavilion at the New York World's Fair.

Among locales shown are the Lincoln Memorial, the Capitol and President Kennedy's gravesite in Washington, D. C. In Los Angeles, scenes include movie studios and nearby Disneyland; in Seattle it's the Space Needle. Original music for the film was composed by Niles' musical director, Sid Siegel; direction and camera work by Oz Zielke; editing by Bob Euford, all of Niles' Chicago organization. • • •

**Donald Bassist Schools Offer Picture on Careers in Fashion**

☆ A new career opportunity film was recently introduced by the Donald Bassist Schools for Fashion Careers of Portland, Oregon. Primarily intended for high school counselling sessions, the 13-minute color film, *Your Career in Fashion*, purports to stimulate interest in fashion careers.

The Bassist guidance film is successful young women in the fashion business who discuss careers in retail fashion buying, merchandising, and fashion coordinating. Job opportunities in TV, newspapers, sales promotion, sportswear designing and interior decorating are also reviewed. •

om of 10,000 audience at Cleveland premiere, "The Present Is Prologue."

## The Principal's Role in Modern Education

**FILMED STORY** of the modern American high school principal is told in *The Present Is Prologue*, produced for the National Association of Secondary-School Principals and premiered at the 100th Anniversary of that organization meeting in Cleveland's huge Municipal Auditorium on February 8th.

From Morgan Associates, Inc., Washington, D. C. made the documentary. The film and accompanying booklet on the role of the organization were made possible by financial assistance from the Fund for the Advancement of Education.

An audience of over 10,000 attended the Cleveland showing and witnessed two on-stage presentations and a slide program, all produced and staged by Byron Morgan and his associates.

The Principals' Association was founded in 1916 with Europe already at war. In Detroit that year, the NEA Department of Superintendence meeting, secondary-school educators were in rebellion against the traditional college domination of the high school principal. Principals wanted to speak for themselves on secondary education—especially concerning the curriculum. Theirs was a natural leadership position. But they needed an organization of their own.

On April 16, 1916, in Chicago, high school principals formed the National Association of Secondary-School Principals and elected B. Frank Brown, of Lake View High School in that city as their first president.

The story of the complete film,

which takes viewers right up to the present era, is given in an excellent accompanying booklet. And the picture itself is being distributed throughout the U. S. and abroad by NASSP and the National Education Association.

A footnote to this story was the discovery by Morgan of a real-life high school principal who can act circles around his TV counterparts. This Ph.D. is a former boxer and paratrooper who looks like Richard Conte. He is Alex Gottesman of Randolph Junior High School in Maryland.

## "Control for Profit" Shows the Savings Made by Temporary Help

The Kelly Girl Service, nationwide temporary help agency, has released a 13-minute motion picture that will surprise many who see it. *Control for Profit* has no girls in its cast!

This apparent oversight has good reasoning behind it since the basic purpose of the new picture is to dramatize and explain the concept of temporary contract service. A symbolic treatment was recommended by the producer, The Jam Handy Organization, so that attention is on the resources and controls which produce profit.

Animated symbols, rather than pictures of people at work, show how management can profit by temporary business services in many ways to get jobs done, while maintaining a minimum permanent staff. The motion picture shows management audiences that a "Call for Kelly" can help with a staffing problem in marketing, engineering or in the plant, as well as in the office. Prospects are introduced to each of the Kelly divisions: Kelly Girl, Labor Aides, Market Aides and Kelly Temporary Services.

The Handy Organization has already produced several film programs and all the national conference presentations for the Detroit-based Kelly operation, which has grown from "scratch" in less than 20 years to a \$45 million annual volume.

**Falstaff Sports Films Available from 20 Offices of Modern TPS**  
An entire series of half-hour films on baseball, football, fishing and auto racing, included in the Falstaff Sports Film Library, is now available through 20 regional offices of Modern Talking Picture Service, Inc.

Sponsored by the Falstaff Brewing Corporation, the library includes such films as 1965 *National Football League Highlights*; 1965 *St. Louis Cardinals' Football Highlights*; the 1965 *Darlington Southern 500* and the 1965 *Rockingham American 500* auto races. *Baseball Highlights* is a history of that big-league sport and fishing adventure is provided in *Bonanza at Great Bear* (filmed in the Canadian Northwest) and *Lure of Labrador*. Write Modern TPS, 1212 Avenue of the Americas, New York, N. Y. 10036 for the name of the nearest library and if titles are available in your area. •

## How We Can Help the Mentally Retarded

**M**ENTAL RETARDATION has caught the attention of a nation long unaware that a vast human resource was being neglected through ignorance. Helping to alert viewer groups is a perceptive 23-minute color film, *Time Is for Taking*, which Stuart Finley has produced on this too-little understood subject.

Filmed at Camp Kentan, Middleburg, Va., a residential camp for the mentally retarded, it highlights information about this condition (it is *not* a disease) and shows the unique problems of the retarded, their potential for recreation and observes the camp program in action.

The film points up that this condition is obvious in some cases, while in others it is quite inconspicuous. Characteristics such as

impaired learning, slowness in perception, negative reactions to new situations, poor adjustment and poorer judgment and faulty reasoning are brought out. But this is termed a "cheerful" film and it is that for parents of retarded youngsters.

Although the focus in on this residential camp (which provided unequalled opportunities for honest and uninhibited photography by Finley), it tells the basic story of retardation anywhere and everywhere. Today's technique, the film shows, is to stimulate the retarded child to develop steadily as his own speed. *Time is for Taking* is a most apt title as this picture explores the potential of recreation, in general, and camping, in particular, which it explicitly points out need full exploration and

A scene from "Time Is For Taking" development to aid the retarded.

For further information on securing a print, contact Stuart Finley, 3428 Mansfield Road, Fish Church, Va. 22041.

## "Free Film Programming Guide" Offered by Sterling Movies U.S.A.

Sterling Movies U.S.A. has released its 1966 Winter-Spring Free Film Programming Guide to television stations throughout the country. The combination guide and order book contains 321 film listings, of which 178 are in color.

In addition to individual titles available for free film use for half-hour and quarter-hour current and historical world-wide repeats and series of short newsfilm releases.

For extended programming, Sterling offers fifteen series. Among these are *Frontiers of Science*, 30 half-hour films; *Comps*, 27 all-color half-hour travel films; and *Kukla, Fran & Ollie*, 13 12-minute films. Sterling's staff of programming consultants are available to assist TV station personnel in the selection of these films.

## Ansochrome Film Exposure Guide Available from Bebell & Bebell

A handy exposure index guide for Ansochrome 16mm and 35mm motion picture films, types D-50, D-100, T-100 and D-20, is now available from Bebell & Bebell Color Laboratories, 118 West 24th Street, New York 10011.

Filtration for emergency situations in converting from daylight to tungsten and from tungsten to daylight is shown for all the films.

Printed in two colors, the card is designed to fit into a wallet, card case, any size of pocket, or to be pasted on the side of a camera magazine.

The card is intended particularly for TV cameramen. Bebell & Bebell specializes in high-precision fast Ansochrome processing. •

Mr. Harold Wondsel  
Film Graphics, Inc.  
396 Lexington Avenue  
New York, New York

Dear Harold:

I thought I should share the following memorandum with you and the rest of the gang at Film Graphics. It is from the Copy Supervisor in Philadelphia.

"I had my first opportunity Monday to screen the completed Bruning 3000 film.

"It's a honey, Dave. Particularly considering the time and pressure under which you worked.

"I invited others to view the epic, too, and we drew a sitting ovation. Not a dry eye in the house. Couple this with an enthusiastic reception from the client, and we have even more reason to thank you."

So, to all of you at Film Graphics (you Paul, Pete, Sid, etc.), go my thanks for a job well done under a very, very rough deadline.

Sincerely,

Dave

G. D. Gudebrod

Synchron Condenser Microphone

**S-10 Condenser Microphone is New from Synchron Corporation**

The Synchron Corporation of Watngford, Connecticut, makers of radio devices, announces a new pressure gradient type condenser microphone known as the "S-10." The self-contained S-10 operates on a Mallory TR-126 mercury battery of 1,000 hours life and employs a Field Effect Transistor for condenser microphone use. Frequency range is listed as 20,000 cps with a deviation of less than 3 db. A Mylar diaphragm is included.

The Synchron microphone has a nickel finish, weighs 9 ounces and the battery, measures 7 3/8 inches in length, and has a diameter of 1 1/2 of an inch.

The S-10 is sold with 20-foot cable, swivel mount, battery and carrying case for \$240.00. For further information write our New Products Desk or the maker.

**"Super-Carousel" Delivers 2,000 Lumens for 35mm Slide Projection**

Engineered around the reliable Kodak Carousel projector, a new "Super-Carousel" portable high-intensity 35mm slide projector which puts out 2,000 screen lumens has been introduced by the Ralke Company, Los Angeles, Calif.

The new unit has a unique 500-watt Xenon lamp source and a patented power supply system but

Ralke "Super-Carousel" projector

operates on ordinary 110-volt AC and weighs less than 65 pounds. For convenience, an electronic dowser is built into the light chain and standard Kodak accessories, such as programmer and remote control, can be used.

Lenses from 1.4" focal length up to 9" focal length are available to meet a variety of show conditions. Literature is available from the Ralke Company at 641 N. Highland Ave., Los Angeles.

\* \* \*

**Technicolor Model 260 Now Available for Overseas Use**

The Model 260 Super 8mm Instant Movie Projector, designed specifically for use on 50-cycle foreign voltages, is now available for world markets. This Technicolor product adapts to any of three different voltages without benefit of transformer, simply by adjusting a convenient selection switch built into the projector. The three ranges are: 110-120 V; 220-230 V; or 240-250 V, as required.

**Smallest ColorTran Crab Dolly**

Only 27 x 39"; Weighs 185 lbs. A new crab dolly claimed to be the smallest, truly professional unit of its size and offering several new features has been announced by ColorTran of Burbank, Calif.

The ColorTran Crab Dolly is 26-3/4 inches wide x 39 inches long, weighs 185 pounds excluding the easily dismantled Hydraulic Lift which weighs 45 lbs.

Besides conventional crabbing and rear wheel tracking, ColorTran's dolly offers front wheel steering. The detachable hydraulic camera lift is absolutely silent and provides continuous descent rates with a full 31-inch stroke. The lift can be operated either by the cameraman using a foot pedal, or by the grip through a manual lever at the rear of the dolly. The high-low range of the Hydraulic Lift is from a maximum of 56 inches from the floor to a minimum of 25 inches.

The Telescopic Hydraulic Lift requires no external power source and is powered by bottled carbon dioxide (CO<sub>2</sub>). It is said that approximately 60 full 31" up-and-down lifts for camera rigs as heavy as a B N C can be obtained from one five pound CO<sub>2</sub> bottle.

A shifting mechanism on the ColorTran Crab Dolly permits pre-selection of two steering modes from any of the following steering mode combinations: from front wheel steering to crabbing, from front wheel steering to rear wheel tracking, and from crabbing to rear wheel tracking.

Constructed of lightweight cast aluminum, the Crab Dolly can be disassembled without the use of

Arri With Lens Motor Drive

**Arriflex Offers New Motor Drive for Angenieux 12-120 Zoom Lens**

A new Motor Drive for the Arri 12-120 Angenieux zoom lens is available from the Arriflex Corporation of America. The drive features Arri's radically-improved mount system, requiring no tools, machining or shop installation. Only two hand screws are used to connect it to the zoom lens without removing the crank assembly.

The drive is based on a specially-designed, custom-wound DC motor. This diminutive power source develops high torque and operates smoothly over a wide range of zoom speeds. It also provides bi-directional and adjustable speeds, rated at an eight-to-one range.

The system incorporates a slip clutch to insure smooth stops and starts with maximum motor protection. A control unit gives the cameraman one-hand control over stop-start, direction and speed of zoom. Two adjustable pre-set stop rings are supplied so that the cameraman can pre-determine specific zoom ranges.

The new Motor Drive is available from all franchised Arri dealers or write: Arriflex Corp. of

#### 12-140mm Angenicux Varifocal Lens Is Available from Arriflex

☆ A new varifocal lens of special interest to cameramen for medical, sports and special effects photography was recently announced by the Arriflex Corporation of America. The lens is known as the 12-240 mm Angenicux varifocal and is available in a genuine factory-original Arriflex mount. An Arri lens cradle (see illustration) is essential to provide proper support and lens alignment.

The 12-240 mm Angenicux lens, designed for Arriflex model 16S and 16M cameras, has three maximum diaphragm openings: f 3.5 permitting zooming from 12 to 60mm; f/4.0 with the lens operating from 12-140 mm and f/4.8, making it possible to zoom from 12-240 mm.

The 12-240 Angenicux weighs 4 lbs. 2 ounces, is 9¼ inches long and is sold with a special filter holder. A mechanical crank which permits quick release for the cameraman to utilize the zoom handle controls the zoom operation. A special sunshade/filter holder which accepts the same filter as the Angenicux 250 lens is also available.

The price of the 12-240 Angenicux (Catalog #311414) is \$2440.00. The matching lens cradle (Catalog #339061) is priced at \$210.00. Available in limited quantities at franchised Arriflex dealers or write our New Products Desk for detailed literature. •

#### Long-Life Quartz Iodine Lamps for Super 80, Cine-Queen Lights

☆ ColorTran Industries, Burbank, Calif., has announced the availability of both Super-80 and Cine Queen lights with long-life Quartz-Iodine lamps.

The Super-80 is now available for use as a fill light or as a super flood with 1300 watt R-80 Quartz-Iodine lamps operating directly from 120 volt, AC or DC.

The Cine Queen can be used as a medium range key light or as a long range flood in TV and motion picture photography. The unit is available with Par 64 3200° K or 3400° K lamps, also operating from 120V, AC or DC. The Cine Queen housing rotates a full 360°. Write New Products Desk for additional data on these products. •

Kodak's integrated control center.

#### Kodak Integrates Control Center for Multiple Projection Shows

☆ At a time when the increasing number of audiovisual displays complicates the job of projectionists, the Eastman Kodak Company has devised a unique and integrated control center for multiple equipment operation.

Consisting of "interwoven" projection of 2 x 2 slides from different projectors, both Super 8 and 16mm motion pictures and synchronized sound on magnetic tape, the setup can be programmed for punch tape or used manually.

The Eastman system incorporates three Carousel Projector for slide showing; a 16mm Kodak Pageant Projector, Model TR-26; a Super 8 Kodak Instamatic 90 Projector; a stereo tape deck; a punched tape reader and manual controls.

Plans for constructing the Multiple Projector Control Center are available from the Motion Picture and Education Markets Division, Eastman Kodak Company, Rochester, N.Y. 14650.

\* \* \*

#### Buhl's Auditorium Lens System for Sawyer Rotomatic Projector

☆ A new version of the Auditorium Lens System for adaptation to the Sawyer Rotomatic 35mm projector was announced by the Buhl Optical Company of Pittsburgh, Pa. The system uses a lens four inches in diameter and can accept the full light of the projector without requiring changes in the condensing system.

To increase the versatility of the Auditorium system Buhl offers fifteen focal-length lenses ranging from 8.5", f/3.0 to 15" f/4.1. These can be purchased separately. The price for the Auditorium Lens System complete with carriage and choice of no focal-length lens is \$125.00. Write our New Products Desk for literature on all Buhl products. •

Bill Thorn, Manager of Undersea Technology for Rocket Research Co. sits test boat while Rarig's Gary Crymes waits to shoot underwater sequences.

## Underwater Film Technique: Project Rise

**T**HE GOLD MEDAL WINNER at the recent Underwater Film Festival held in Santa Monica, Calif., *Project Rise*, was produced for the Underwater Division of Rocket Research Corporation by Rarig Film Productions. Both companies are based in Seattle, Washington.

The film shows a revolutionary new technique in underwater salvage operations, using the Rocket Research-developed system based on a "Buoy Pak" which is attached to the object to be refloated. This can be done by either a diver or, depending on the depth, by remote use of underwater television cameras.

The heart of the system is a hydrazine gas generator which breaks down the hydrazine into a gas on command. Close a switch on the surface or on site, the generator fills flotation bags and up she comes! In *Project Rise*, the operation is first shown at 30 feet and later at 720 feet. A 17-foot cabin cruiser, with the refloatation system attached, was sunk in Puget Sound.

Rarig's staffer, Gary Crymes, who photographed and edited the film, were on the bottom when the

first charge was fired. A malfunction in one of the valves brought no reaction. But on quick repair and at the second firing the buoy came up like a cork. The operation was so successful that the craft was sunk and refloated three times in one afternoon and assuring the writer David Christensen and Rarig's good footage.

On completion of shallow water testing, the launch was taken to the deep water test site and sunk to a 720-foot depth. Here no diver could go down and repair a valve. But using underwater TV, the buoy was located, the charge fired and up she came to set a new world record for intact vessel recovery. Needless to say, the camera's caught the historic event.

The completed 11-minute picture gives a complete account of both shallow and deep water tests, with principles and possible applications shown through animation.

Gary Crymes, Rarig Film Productions, lenses the Rocket Research boat as it sinks to bottom of Sound.

"Golf With Sam Snead" Produced by Henry Ushijima for NBC-TV

Shooting outdoor golfing sequences in the fall for Springtime, 1956 network color television showings was no easy "chip shot to the green" according to Henry Ushijima, president and executive producer of the Park Ridge, Ill. company bearing his name.

Ushijima and company have just finished work on the NBC network series, *Golf With Sam Snead*, that began its 13-week run on Saturday, March 26th and will air in the 5:30 p.m. (EST) time slot. Produced and directed for NBC lead and Independent Sports by Henry Ushijima, the series is sponsored by the Firestone Tire & Rubber Co. through all of its half-hour color showings.

The rolling fairways and spa-

cious greens of the Firestone Country Club, in Akron, Ohio, provided a colorful autumn setting for the series. Slammin' Sam is the principal performer on camera. Shooting began last September 28 but unusually bad weather kept four

While filming "*Golf With Sam Snead*" TV series, Henry Ushijima gets pointers on his game from pro.

crews in a state of suspended animation for 11 of the first 18 shooting days.

And there were other production problems: wireless sound recording equipment was essential to assure perfect freedom of motion for the golfers. All four lightweight, portable and ultra-quiet Eclairs with specially-engineered 110-volt synchronous motors had to operate in synchronization. Ultra slow motion is used extensively to demonstrate teaching points.

So generator location was always critical to avoid background noise as was power feed to remote locations in the middle of the course. Even with these problems, the final program was in the can by the first of November and editing was underway.

*Golf With Sam Snead*, Ushijima explains, is designed to appeal to the average golfer of all ages, sex and physical stature (the duffer, if you will) with teaching the prime objective.

#### Meredith to Head Creative Work at Motion Picture Service Co.

☆ Roy Arthur Meredith, writer and documentary producer, is joining the staff of Motion Picture Service Company, it was announced by Gerald L. Karski, president of the San Francisco based firm.

Meredith will be in charge of writing, producing and directing in the documentary, industrial, and promotional fields, according to Karski.

Last year Meredith received the Jane Harrah Award from the San Francisco Bar Association for a documentary film, *The Juvenile and the Law*, and his documentary series, *The American Civil War*, won a Sylvania Award.

In addition to writing for film and television media, he has been the author of seven books and, in collaboration with David Aldrich, he wrote *S.O.S.*, a satirical play on war. •

Tin-engine North American Photographic Aircraft, Flying-W Productions.

**Flying-W Productions Acquires Tin-Engine Photographic Plane**  
 A specially-equipped twin-engine North American Photographic Aircraft has joined the fleet of light planes at Flying-W Productions, Inc., Medford, N. J., as that firm announces the expansion of its services to motion picture and

television producers. The new aircraft is capable of speeds from 75 to 250 miles per hour with a maximum range in excess of 2,000 miles.

Flying-W president Bill Whitesell notes that this plane is the most fully-equipped camera ship in private aviation. It has shooting positions in the nose, tail, top, bottom and on both sides, each fitted with a newly-designed mount capable of accepting equipment ranging from light-weight 16mm to the heaviest 70mm motion picture cameras.

The nose position is large enough to house a cameraman, an assistant, a producer and a director. The plane can accommodate a production crew of seven with equipment and baggage but can operate from the smallest airstrips due to its slow-flight capabilities.

New York offices of Flying-W Productions are at 222 East 44th Street. Further inquiries can be directed to Robert Saldenberg at that address or by phoning 212-MU 7-9032. The Flying-W Ranch and air strip is located at Medford, New Jersey.

**Before the show goes on at Business Week, the Da-Lite projection screen goes down.**

And in Business Week's Chicago office, the screen goes down (and up and out of sight) automatically—at the touch of the button.

Why did the famous McGraw-Hill publication select a Da-Lite Jr. Electrol projection screen? For convenience. For ease of handling. For space conservation. For value and long range economy. And for its unique ability to add showmanship to sales meetings and presentations. For the same reasons that business and industry; schools; churches; hotels and motels; and institutions have selected Da-Lite.

Da-Lite electrically operated screens (four models in all) are available in sizes ranging from 50' x 50" through 20' x 20'. They're designed for installation on the wall, ceiling or within the ceiling. Prices? Reasonable enough to fit any budget.

Business Week's Da-Lite screen was purchased from Midwest Audio-Visual in Chicago. Write for information and the name of a franchised Da-Lite dealer near you.

**Westinghouse Introduces Broad Line of Xenon Studio Lighting**

A broad line of xenon lamps expected to find wide application in the motion picture projection field, spot lighting on motion picture and stage sets and in missile filming illumination, is available from Westinghouse.

George B. Saviers, the company's special products sales manager, states that the new line of pure xenon lamps will be available in 300, 500, 1000, 2500 and 6000 watts. According to Saviers, the new lamps will replace carbon arcs in many applications.

Color temperature of the xenon lamps is rated at 6000° Kelvin making them excellent for color photography. In addition, they have a far longer life — 1500 hours as opposed to 10, 20, or 75 hours life expectancy for tungsten projection filament lamps.

Although the initial cost of xenon lamps is higher, an advantage claimed is lower operating costs. Saviers cited a case of a 1000 watt incandescent projection lamp which cost about \$1 an hour to operate. Its xenon equivalent would run about ten cents an hour with 150 fewer lamp changes involved.

In the fascinating new field of missile photography project cameramen employing xenon lamps are able to film a launching at any hour using outdoor color film — a feat not possible with lamps which were formerly used.

## Community Relations in the Missile Age

**H**OW DO YOU PERSUADE an entire community to cooperate when you propose to dig up thousands of acres of farmland and to upset their normal routines? That was the problem faced by Sylvania Electric Products, Inc. and the U. S. Air Force when they set out to install a new Wing of Minuteman Missiles in North Dakota.

Sylvania is responsible for the ground electronics system which controls missiles until launch. A thousand miles of communication cable had to be installed to connect missile silos to launch control centers. This meant obtaining "rights of way" from thousands of landowners across whose property the cable would be laid. When this work was undertaken in other regions, resistance was encountered which slowed progress of a vital defense program.

But it was reasoned that if people *understood* why this project was necessary and how it would affect them, they'd be more inclined to cooperate. It was decided to inaugurate an intensive Community Relations Program with a motion picture and a recording playing major roles.

The film: *Minuteman and You* was produced for Sylvania by MRC Films, a division of McLaughlin Research Corporation. It opens with a documentary sequence about North Dakota and gains immediate audience identification as it shows the people, their land and events. The narrator says that most Americans, including the people of this state, want to live their lives fully and to raise their children in a world at peace. But for almost two decades, our nation has been faced with constant threats to its security.

The scene switches to I-2-d Square in Moscow, with a massive display of military might parading on May Day. It continues this historical sequence with authentic newsreel footage and unusual stock shots as it makes the point that the U. S., as a leader of the Free World, has the responsibility of maintaining its security.

The film also shows the capabilities of the Minuteman and how it is operated. The five Wings now in existence are described and the

Missile control room is picture in Sylvania film "Minuteman and You."

Sixth Wing is about to be located in the eastern part of North Dakota. At this point the Air Force officer who has chief responsibility for the installation speaks directly to the audience. He describes what will be taking place in this area during the next two years as the missile complex is being installed. He then introduces Sylvania's Technical Manager who goes into more detail.

Steps involved in accomplishing the proposed work and how these will affect farmers and landowners in the area are depicted. Finally, the farmer, the landowner and the businessman are given an opportunity on screen to ask whatever questions they may have to a responsible Air Force official. The questions are answered one at a time, frankly and fairly.

The film has been widely shown on local television, at meetings of the Grange, Farmers Unions and civic organizations. Public cooperation has been very gratifying, according to Sylvania officials. *Minuteman and You* was written, directed and edited by Lawrence Mollot. Narration is by Dwight Weist and project supervisor for Sylvania was James Harnedy. It is the 18th film produced for its sponsor by MRC Films in the past three years.

BUYERS READ BUSINESS SCREEN

**M Film Series Show How to Improve Performance of Manager**  
 A new series of five related films designed for in-company training on the fundamentals of improving managerial performance, has been released for sale or lease, by the American Management Association.

The series, *How to Improve Individual Manager Performance*, features James L. Hayes, Dean of Business Administration, Duquesne University, a management authority of broad experience who has made significant contributions in the field of management education. He presents a hard core of material around which a company-directed program can be engineered for improving managerial performance.

Each of the films which make up the series is short, succinct and to the point. Average running time is 3 minutes. Subject matter is presented in a way calculated to insure in-depth discussion.

The five films in the series include: *Concepts of Management*, which makes clear the five distinct functions present in every management job, and shows how intelligent application of them results in better management; *Management Organization and Job Description*, which shows how to efficiently designate and define the role of man within an organization; *Standards of Performance for Managers*, which explains how the

individual can achieve more with the help of standards of performance; *Performance Appraisal for Managers*, which illustrates how to identify job areas in which a man needs help; and *Improving Performance Through Individual Manager Development*, which shows what the manager can expect when he puts into practice the principles explained in the series.

The AMA films are accompanied by a leader's guide specifically written for company training leaders. All the films are standard 16mm black and white kinescopes made from video tape. Rental fees for the series are \$250 for AMA members and \$300 for non-members. Sales prices are \$1250 for members and \$1500 for non-members, from AMA's Film Dept., 135 W. 50th St., N.Y.C. •

given to

HOLLYWOOD  
FILM ENTERPRISES, INC.  
Since 1907

## HFE Pays Tribute to Film Award-Winners

**H**OLLYWOOD FILM ENTERPRISES, Inc., beginning its 59th year of laboratory service to the motion picture industry, has given special recognition to customers whose films won awards during 1965. To each, for an award-winning film or films, went a certificate signed by Mickey Kaplan, president and Thomas H. Emmett, sales manager:

*HFE Salutes (producer's name), a favorite HFE-Quality Lab Customer, for their outstanding Award-Winning Film Production, as evidenced by (name of competition and award) given to (name of film or films).*

Winners included Douglas Aircraft Company which took Cine Golden Eagles for *The Many Faces of Mexico* and *The Wind of Change*, and "multiple honors" Chris Certificates in the Columbus Film Festival for the same pair plus *Three Facets of Adventure* and *The Sleeping Giant*.

### Many Received National Awards

John J. Hennessy Motion Pictures' certificate was gained by *Who Needs You, Buchanan?*, U. S. Navy-sponsored recruitment film which got a "V-P" Merit Award in the National Visual Presentation Association competition.

To Lockheed California Company went a certificate for *SST—Challenge of the 70's*, winner of an Industry Film Producers Association Cindy in the sales promotion category.

Los Angeles County got a certificate for *Angel by the Hand*, a Cindy winner in the public information class.

The certificate for North American Aviation, Los Angeles Division, recognized the technical information classification Cindy given *Speed and Heat*, and another in special category for *Once Upon a Time*.

Parthenon Pictures' awards included *Happy Holidays — Any-*

*where in Michigan* and *Option Makers*, Chris winners; *Everypd Has Two Jobs*, winner of a AM from the Society for Advancement of Management; *Slips and falls* and *What'll You Do If*, bronze plaque winners from the National Committee on Films for Safety

Safety, Technical Films Cid

Richard J. Soltys Productions' *Your Responsibility for Safety* took a Merit Award in the competition of the National Committee on Films for Safety.

Technical Communications Inc. got an HFA Cindy for the NSA production, *Electric Propulsion* entered in the technical information class.

The certificate which went to the U. S. Naval Ordnance Station was gained by a Cindy for *The Challenging World of Undersea Technology*, given a special category.

## Hearst Metrotone News Form New Film Production Division

A new division, Metrotone Productions, has been formed by Hearst Metrotone News, with J. Turell as Managing Director.

Hearst Metrotone News is jointly owned and controlled by Hearst Corporation and Metro Goldwyn-Mayer. It presently produces the theatrical newsreels released by MGM and Universal as well as the monthly school newsreel, *Screen News Digest*, which is said to be the most widely viewed educational program of its kind in the world. For many years has also produced film for various government agencies and the American industry.

Mr. Turell, a partner in the foreign film distribution company Janus Films, previously founded Sterling Television in 1946 served as its president for 19 years. In his new position he plans to use the "gold in the vaults" of parent companies as a background to the production of films.

## News Along the Film Production Lines

### Capital Film Services, Michigan Announces Physical Plant and Staff

Robert Hunter, president of Capital Film Services, Inc., Lansing, Michigan has announced a physical expansion and the addition of key personnel.

Hunter reports: "We now have the most modern motion picture, television, color TV commercial facilities, sound recording studio, animation and editing rooms plus one of the largest in-door sound stages outside New York."

The 35-year old Michigan firm processes film under a license arrangement with Eastman Kodak, working through photo dealers in their color movie film and slide processing laboratory.

According to Hunter, Robert J. Neuerl will be manager of Capital's film processing laboratory. Ray Willis has also joined the firm as director of the motion picture division at East Lansing.

### DeWolfe Installs New Oxberry 5mm Slide, Filmstrip Camera

That is claimed to be the world's most advanced camera for 5mm slide and filmstrip production has been purchased by Admaster Prints, Inc. Built by the Oxberry Corp., the camera is controlled mainly by a foot-square "black box" that stands a few feet from the equipment itself.

Henry Roth, production coordinator, explains that the camera provides a semi-automated one year old. "Technical advances come so rapidly now," he says "that an equipment 'standard' just a few years back now is antique."

For stability the stand of the Oxberry is made of heavy welded steel construction from which a precision vertical structure reaches toward the ceiling. Electric motors control movements of the camera and film. Unlike other cameras which move the lens in relation to the film, the Oxberry product keeps the lens fixed and moves the film plane.

Focus maintained by the camera is provided by cams that move up and down and special extra equipment permits an extra wide field.

To accomplish exact art positioning on the film a built-in device projects a rectile image that shows exactly what the camera sees. There is also an extra accommodation for the use of 6008 color film which offers su-

perior quality when shooting transparencies.

\* \* \*

### Research Products, Inc., Expands Laboratory Equipment Facilities

Research Products, Inc., Hollywood, has ended the sub-contracting of some components with completion of a program of equipping its own machine shop fully for the manufacture of optical printers, animation devices and related special equipment. At the same time Hal Scheib, president of the company, announced development of a new service operation which will handle local calls, initially, on equipment within the general range of its interests.

The manufacturer recently delivered another optical printer to Consolidated Film Industries, Hollywood, where it will be used for printing 8mm and super-8 from 35 and 16mm. Research Products also currently is installing an optical printer at MoviLab, Inc., New York City.

### DeWolfe Music Catalog Library Now Available at Corelli-Jacobs

The DeWolfe Music Catalog, said to be one of largest individual collections of music on disc and tape in the world, has recently been made available to American film producers by Corelli-Jacobs Film Music, Inc.

The DeWolfe collection is largely composed of new, up-to-date sounds for modern films. It is constantly in the process of enlargement — 17 new recording sessions are scheduled between now and May.

Descriptive literature is available from Corelli-Jacobs at 25 West 45th Street, New York 10036.

### Mike Segarra, Inc. of San Juan Offers Puerto Rico Film Advice

A new consulting service for TV commercial and industrial film production units planning to shoot films in Puerto Rico is now available on the island.

Mike Segarra, Inc., 1009 Ashford Ave., San Juan, which until now has specialized in servicing stateside and local public relations clients in Puerto Rico and the West Indies, has introduced the new service. The Segarra firm has for some time helped U.S. companies filming in Puerto Rico.

The new service includes assistance in selection of sites (which include two major resort hotels.)

## WHAT'S NEW ON FILM

### New Color Filmstrip Series on Consumer Finance Available

☆ The Money Management Institute of Household Finance Corporation announces the availability of a series of filmstrips on consumer financing. The 35mm filmstrips include captions on each frame, and each filmstrip comes with a study guide that gives suggestions for supplementing the material, and for adapting it to various age and ability levels.

Titles in the Money Management Series include:

*A New Look at Budgeting* — shows how to meet family clothing needs on a limited income.

*Your Money's Worth in Shopping* — explains how to make money go farther in the marketplace.

*Managing Your Clothing Dollars* — tells how to meet family clothing needs on a limited income — includes wardrobe planning, clothing selection, and clothing care.

*Spending Your Food Dollars* — illustrates how to make the most of money spent on food for the family.

*Your World and Money* — shows young people how to handle money effectively.

The individual cost of filmstrips is \$1.50. The complete set of five filmstrips sells for \$6.00. For further information write: Money Management Institute, Household Finance Corp., Prudential Plaza, Chicago, Ill. 60601.

### Inspirational Color TV Spots Released by Nat'l Church Council

☆ The National Council of Churches has produced a series of 20- and 60-second TV spot announcements in color intended for nationwide distribution. "Market-by-market" release begins in Atlanta.

Carrying the message that "God is alive, loving and caring for all people," the spot announcements underwent a trial run in the Columbus, Ohio area in early February.

The spots were produced for the National Council of Churches Broadcasting and Film Commission by the Radio and Television Division of the Presbyterian Church in the U.S.A. at a cost of \$41,000 including distribution.

Co-producers of the series are Nancy Carter, a staff producer of the United Radio and Television Division, and Dennis Wheeler, an audio and graphics producer, both of New York City.

## funny, you don't look like a salesman

Maybe not. But it sure sells like one. Gets in while the boys with their catalogues are still sitting in the lobby. Why? Because everyone likes a show. The New Technicolor Super B Instant Movie Projector is the ideal way to introduce new products to your prospects - in color - in live motion.

Your salesmen will love it and use it. Weighs only 8

pounds. Snap in cartridge completely eliminates threading and re-winding. Gives bright, bright picture in any room.

For in-store selling of your products, we've got a rear projection model - gives a sales pitch you simply won't get otherwise. Easily built into displays.

Need a film? We can handle that too.

# CAN CLOSING START BEFORE A CALL IS MADE?

Yes! Even before a salesman enters a prospect's office, the sale should be made mentally. This color film-strip shows how to accomplish this; how to plan in advance of the interview. It's one of a powerful series.

## "Closing the Sale"

demonstrates how to make presentations that keep an eye on closing . . . from the moment of the opening. It provides examples of how to pursue the order . . . how to counteract a refusal to sign . . . and how to resume or continue selling when the prospect appears to have ended the interview.

## "SELLING IS MENTAL"

offers six sales training filmstrips oriented on the attitudes and techniques of dealing with people . . . to reduce your problems in training.

## NEW RELEASES

### "GOOD OLD SAM"

29½ minutes — color — 16mm format. Merrill Lynch. A tele-story, with suspense and drama yet, wherein the hero is the investigation of his very own investment account. Recommended for adults — wit mo

### "LOVE THAT C"

This 9-minute color film, narrated by Jack Benny's famous Florsch, pitches a safety message (pre-ventive maintenance), with the fast action that makes it a fast opener or warmer-upper for meetings. (Prints \$79.50).

### "TWO CHEERS FOR CHARLIE"

28 minutes — color — 16mm format. Mutual and United Omaha. Charlie Adams, a man for Life and Disability insurance, makes three pitches and tells in a human story which uses and laughter. The sales ideas are frankly presented. It's Charlie is a crack salesman and audience gets the subtle idea that he is honestly dedicated to his profession.

### "LOVE THY CUSTOMER"

27½ minutes — color — 16mm format. Ford Marketing. A new approach to the "right" employee training program — i.e. getting identification and a pathy from the guys before putting the boot. Very funny but binding-on-the-square, and with right practical instruction.

### Announce Chicago Program for 13th Annual "Day of Visuals"

☆ The 13th annual "Day of Visuals" conference and film competition sponsored by the National Visual Presentation Association moves to Chicago for the first time in its history this year. The events will be held June 1-2 at the Sherman House and official host in 1966 is the Midwest Chapter of the NVPA, headed by its president, Norman C. Lindquist.

"The fantastic increase in the use of audiovisuals at all levels of human endeavor will be seen through the fourteen different categories in which NVPA will present awards on June 1st," according to Lindquist, who is vice-president for sales of the Fred A. Niles Communications Centers, Inc.

"Medicine, public welfare, fund raising, training, documentary, educational and travel subjects are only some of the examples of the broad application of these techniques. Each of these categories is being examined as to whether they have made successful use of

motion pictures or slidefilms," he concluded.

Organizations who wish to submit entries for the "Day of Visuals" competition or to attend its seminar programs should write to Midwest Headquarters, National Visual Presentation Association, 333 North Michigan Ave., Chicago, Illinois 60601. Entry lists will close Monday, May 2, 1966, according to Howard Rice, chairman of the Awards Committee. He is an executive in the Motorola Communications Division.

General co-chairmen of the "Day of Visuals" are Marvin E. Goessl, Becker-Goessl, Inc. and A. M. Baltzer, National Safety Council. Program chairman is Howard Turner, DuKane Corporation.

### NAVA Names Billy Paul Williams as New Director of Information

Billy Paul Williams has succeeded James Hulfish as director of information for the National Audio-Visual Association. He will be in charge of all publications and publicity for the national dealer organization. He was formerly with the American Optical Company, Instrument Division, in Buffalo, New York where he served as

assistant projection sales manager. He will reside in Fairfax, Va.

### Hy Schwartz Leaves Kalart Co. to Retire After 35-Year Career

☆ A 35-year veteran of the photographic and audio-visual industries has announced his retirement. Hy Schwartz, president of the Audio-Visual Division of the Kalart Company (Victor Animatograph Corp.), and a past president of both the Photographic Manufacturers & Distributors Association and the National Association of Photographic Manufacturers is leaving his post.

A longtime friend of this publication, he was responsible for Kalart's government relations during the early 1940's and when civilian production was resumed in 1945, he had full responsibility for sales and marketing through distributors. He also initiated Kalart's acquisition program, which began with the acquisition of Craig Manufacturing Co. (film editors), then with Victor Animatograph Corporation, a pioneer in 16mm sound projection. Through his work, Kalart also acquired the Automatic Projection Corp. (35mm filmstrip projectors).

An honorary associate of the

Photographic Society of America and a charter member of the International Press Photographers Association. Hy Schwartz hopes to remain close to the industry. He has served with distinction throughout the years. His immediate plans are to explore several areas of photography which have long been of special interest to him.

### Open Entry Lists for the 14th Annual Columbus Film Festival

☆ Closing dates for entries and advance program details for the 14th Annual Columbus (Ohio) Film Festival have been announced by Daniel F. Pruett, president of the Columbus Film Festival Council, sponsors of the event. It will be held October 7-9 at the Hayes Hotel in the Ohio capital city.

Entries were being accepted through March and the final date for entries is August 1, 1966 (5 p.m. EST). The principal categories and their chairmen are as follows: Educational-Information Films, redacted; B. Saunier, chairman; Leisure Industry Films, Galvy E. [redacted] chairman; Health & Mental Health Films, Florence L. Fogel, chairman; Religious Films, Del [redacted] chairman; Travel, U [redacted] chairman.

## ColorTran MULTI-BEAM

FOCUSING QUARTZ LIGHTS

### Instant Fingertip Control from Spot to Flood!

Never before such full control in units so lightweight and compact! ColorTran, Academy Award winner for advanced quartz-iodine lighting design, now offers two full-focusing quartz lights — MULTI-BEAM "1000" (1000-watts) and MULTI-BEAM "650" (650-watts). Intensity control at 10' from 840 fc to 140 fc for the Multi-Beam "1000" (680 fc to 80 fc for the "650"). Ideal for studio or location . . . color or black & white.

& Foreign Films, Daniel F. Prugh, chairman; and Special Fields & Feature Films, S. N. Hallock, chairman. No filmstrips are being accepted this year. Entry blanks may be secured from the office of the Film Council of Greater Columbus at 280 East Broad St.

One of the oldest festivals of its kind in the U.S., the Columbus awards competition attracted over 350 entries last year. One of the new events for the 1966 program is a "Producer's Showcase" which will be held for the benefit of all producers, sponsors or their representatives at the Fort Hayes Hotel on the morning and afternoon preceding the Chris Award banquet, Friday, October 7. Award-winning films in all categories will be multi-screened so that guests can have a choice of the films they wish to see. Public screening of Chris Award films will follow on Saturday afternoon and evening, October 8 and on Sunday afternoon, October 9, at the Battelle Memorial Institute auditorium in Columbus.

A \$15 fee is charged for each

film entered in the Festival, regardless of length. All films entered must have been produced in 1964, 1965 or 1966 and not previously in competition at this event.

### ColorTran Industries Now Part of Berkey Technical Companies

Expanding their already considerable interest in the motion picture and television industries, the Berkey Technical Companies have acquired ColorTran Industries, Inc., of Burbank, California. The Berkey group also recently added the Oxberry Corporation, Mamaroneck, N. Y. and its growing "photo team" includes such well-known industry trade names as Arriflex, Caesar and Ascortlight.

ColorTran will now have access to the extensive engineering, manufacturing and marketing facilities of the Berkey organization, with the immediate advantage of a nation-wide network of warehousing, distribution and servicing facilities as well as additional technical consultation services.

The pioneer lighting equipment firm (a recent Academy Award winner for Scientific/Technical achievement) will continue operations at its 30,000 sq. ft. plant in Burbank under the present man-

agement team, headed by president Milton Forman.

According to Forman "this new development provides ColorTran with the prospect of rapidly achieving further advances in the design and engineering of new types of quartz-iodine lighting equipment for motion picture and television industries."

### Association Films Moves N.Y. Headquarters to 600 Madison

New executive offices at 600 Madison Avenue in New York City are now housing the administrative and sales offices of Association Films, Inc., national film distributor. The company now occupies 6,000 square feet on the 17th floor in the mid-town building.

Publicity and promotion departments, billing and accounting operations and educational sales offices share the new quarters. A combination preview theater and conference room with facilities for showing both standard 16mm and CinemaScope motion pictures, filmstrips and slides has been installed. There is also provision for the installation of 35mm projection equipment.

The new theater is equipped

with a hi-fi stereo sound automatic curtain control electronic dimmer lighting systems may be controlled by the projection or within the theater itself by means of a control console with controls for projectors, dimmer lights and curtains.

Association Films was formerly located at 347 Madison Avenue and maintained national headquarters at that address for more than 45 years. The new 600 Madison Avenue telephone number is (212) 421-3900.

### Jeffee is Film Industry Chairman for United Jewish Appeal

Saul Jeffee, president of Foxlab, Inc., has been named chairman of the motion picture and amusement industry's 1966 campaign on behalf of the United Jewish Appeal of Greater New York.

Announcement of the appointment was made March 7 by Harry Mandel, 1965 chairman of the Motion Picture and Amusement Division's organization luncheon meeting held in the executive offices of Paramount Pictures Corp. Mandel said that the division's 1965 campaign raised \$589,642 for UJA's life-saving and life-building tasks.

# ARRIFLEX® 16BL

## CHOOSE SINGLE AND/OR DOUBLE SYSTEM MAGNETIC SOUND

The Arriflex 16BL brings to location sound filming, the same uncompromising quality, lightweight portability and proven performance that has made the name "Arriflex" famous throughout the world. Arri engineers would not settle for nothing less.

Accordingly, they built the new camera around Arriflex's famed mirror-sound reflex system and registration pin movement. The identical movement used in the Arriflex 16S and 16M cameras. The same rugged, precision movement proven by hundreds-of-millions of film footage! Acoustically isolating the "heart" of all Arriflex's within the new camera body, they cut residual vibration level to meet the most critical location sync sound requirement (3db). And—without sacrificing the classic Arriflex configuration that makes the 16BL as adaptable to body supported filming as it is to tripod mounting or operation. This same configuration provides full sync sound capability—the filmmaker's choice: single system—double system or both.

Result—a proven performer right from the start—a rugged, reliable and versatile self-blimped sound camera. The 16BL delivers the same rock-solid footage with the same handling ease that is the hallmark of all Arriflex cameras. It is the professionals' camera for quality location sync sound filming. Available now in limited quantities for rent, lease or purchase.

The Arriflex 16BL features also include: specially mounted, self-blimped 12-120mm Angenieux zoom lens (or 12-75mm Zeiss Vario-Sonnar) as prime lens; Arri gear-driven, sprocketed, Quick-Change magazine system; 12V-DC, governor-controlled, 12V-DC variable speed, and Synchronous interchangeable motor; built-in frame/footage counter; built-in 0-50 fps tachometer; double-system and/or single-system sound recording; auto-closure, rotating eyepiece; interchangeable ground glass system; 60 cycle sync signal (Rangertone/Pilotone) generator; and, as optional extras: all electric, automatic clap-stick system; dissolving shutter. And more...

### Fairchild Wins Two U.S. Patents on Film Transport Apparatus

☆ The United States Patent Office has issued two patents for rear-screen sound-photo systems based on inventions made by Raymond G. Hennessey, general manager of the Industrial Products Division, Fairchild Camera and Instrument Corporation.

To be published shortly by the Patent Office, the new patents cover a film transport apparatus and cassette, both for sound and picture reproduction systems. Although applicable to a wide range of projection systems, exclusive use of the inventions are presently being employed in the design of Fairchild's Mark IV\* and Mark V\* 8mm automatic continuous sound projectors to be used with the new Moviepak\* film cartridge.

These projectors feature no film threading or rewinding and a two-second film change. Immediate picture and sound are provided during automatic repeat or programmed stop performance. (\*Designated trademarks of Fairchild Camera and Instrument Corporation.)

### United World Moves Sponsored Films to Three Airport Theaters

☆ Implementing the trend in sponsored film exhibition in airport theaters for waiting passengers, United World Films has announced distribution of its film subjects to TravelCinema theaters at the New Orleans, Tucson, and Memphis municipal airports.

These theaters are in continuous operation during peak-load travel hours, primarily showing sponsored films to adult audiences from 9:00 a.m. to 9:00 p.m., as viewers

await connecting and return flights. UWF has moved to loan films of its sponsors to airport theaters to extend their audience areas.

Films sponsored by the American Petroleum Institute, the American Stock Exchange, the National Rubber Bureau and Standard Oil Company are among the titles currently being screened to commuters.

## CINE Elects Officers at Annual Meeting

Du Pont's Alden Livingston is President of Film Council

CINE, the Council on International Nontheatrical (Film) Events, has elected a DuPont international advertising executive as its president. Alden H. Livingston, of Wilmington, Del., was chosen to head the national organization which annually selects motion pictures which represent America at overseas film festivals, at the annual meeting of the Council, held in Washington, D. C. on April 15th.

CINE president Alden Livingston

He is the fifth president of CINE in its ninth year of operation and succeeds Willis H. Pratt, Jr., film manager of the American Telephone & Telegraph Co. The meeting was held in the headquarters building of the National Education Association.

Newly-elected vice-presidents are Ralph P. Creer, American Medical Association, Chicago; John Flory, Eastman Kodak Co., Rochester, N. Y.; and Reid H. Ray, film producer, St. Paul, Minn. Re-elected as vice-presidents were Charles Dana Bennett, Farm Film Foundation, Washington; Thomas W. Hope, Eastman Kodak Company, Rochester; Dr. Anna L. Hyer, National Education Association, Washington; J. Edward Oglesby, Virginia State Department of Education, Richmond; and Brig. Gen. (ret.) Willard Webb, Clifton, Va.

Peter Cott, operating head of the National Academy of Television Arts and Sciences, New York City, was elected secretary of CINE and Dr. Harold E. Wigren, National Education Association, Washington, continues as coordinating director of the Council. James H. Culver was re-elected treasurer and was also named to the newly-created position of managing director. As such, Culver will now be the full-time administrator of CINE.

Alfred E. Bruch, president of

Capital Film Laboratories, Washington, D. C., is a new member of CINE's board of directors. President Livingston named the four vice-presidents who will supervise major organization activities of the Council. Edward Oglesby will handle education and review; Reid will be in charge of education; Charles Dana Bennett will handle finance; and Tom Hope is in charge of information.

**American Medical Association Film Library Reports Record Number of Bookings in 1965**

Greater service through audiovisuals used by physicians, hospitals, medical schools and other professional groups was evident this month as the American Medical Association's Film Library revealed that the total number of film bookings was the largest in its history. A total of 11,635 medical and health films were sent to these groups, according to Ralph Creer, director of the AMA Department of Medical Motion Pictures and Television.

Most of the films are shown for educational purposes among physician's groups, in medical and nurse training classrooms. Total bookings have increased each year since 1955 when 3,007 were recorded.

Analysing the 1965 bookings, Creer noted that the largest group of users of films from the AMA library were civilian hospitals and schools of nursing. Every U. S. medical school except two used the services of the library during the year and paramedical schools were prominent among these borrowers.

The Association's film library now has 2,130 prints of 458 titles. This total includes 119

Bookings of medical and health films library from the American Medical Association's film library have more than trebled over the 10-year period shown on this graph. Hospitals and schools of nursing were most active borrowers last year.

**AND WE'RE NOT TRYING TO BATTER YOU UP.** *Why are you big at CFI?* Because all our customers are big fish to us. No job is too small to warrant our earnest attention. Whether you're a budding producer or an epic film maker — from a spot commercial to a major motion production we give your job individual attention through every stage of its development. *Complete job?* At CFI we provide every service for you right in our own lab. *16mm or 35mm?* We process both in black and white or Eastmancolor. *Special effects? Opticals, titles, inserts, animation photography?* You name it, we do it. *Speedy service? Need dailies in the morning?* Our lab runs 'round the clock. *Quality?* At CFI, we have among the best facilities in the business. Sensitometry equipment insures your film proper color correction and exposure balance; exacting chemical control gives you consistent color balance and density. And because we do the entire job at CFI, our team of experts is supervising your job every step of the way. *Thinking of a filmstrip?* We furnish artwork, shoot 3-dimensional products, superimpose type or shoot your slides from 35mm through 8 x 10 direct into your filmstrip. Special lighting assures minimum contrast gain and our unique continuous-loop printing equipment delivers uniform filmstrip prints from scratch-free negatives. *How long for a top-flight filmstrip?* Well, one week is normal delivery with us. But we'll work with you to meet even tighter deadlines. All these CFI services are as near as your phone. Pick it up and tell us what you need. We'll try to give you those big fish answers.

Amos Burg (right) of Education & Information section of Alaska's Department of Fish & Game presents first print of his "Juneau" film to Chamber of Commerce head, Norman...

Amos Burg's Film "Juneau, Alaska's Capital City" Offers Viewers Some Spectacular Shots

"Fresh and bigger than life," say members of the sponsoring chamber of commerce to the people of the Gastineau Channel. It's a new picture, *Juneau, Alaska's Capital City*, produced by Amos Burg of the Education & Information section, Alaska Department of Fish & Game.

Premiered at a civic banquet in Juneau, the film's spectacular shots drew some applause. But, Juneau people admit, the film comes out second-best to those subjects of natural wonders. Burg rubbed shoulders with an ice-field, flew in a helicopter to a high-laced ski bowl and caught a grizzly bear. The finale is a sunset, followed by the magic of a bear. To potential Alaskan visitors, the film is an appetite whetter.

Processing and prints of the color film were handled by Hollywood Film Laboratories, performing with their usual skill.

# Trade in.

No matter what shape your contrary old 16mm projector is in . . . it's worth something in trade on a new Bell & Howell Autoload projector. Autoload is the simplest of all 16mm projectors to run. It threads itself—completely automatically. Sets up in less than a minute. Shows film in a lighted room if you have to. Simple to reverse film and rerun a scene. Stop it on a single frame. Built-in speaker.

Light enough for your secretary to carry. (Great for road trips.) Full name: Bell & Howell Specialist Autoload Filmosound. Now all you need to know is how much your old projector is worth. Just send us the card. We'll send a man.

Specialist, Autoload, and Filmosound are registered trademarks of Bell & Howell Company, 7100 McCormick Road, Chicago, Illinois 60645

**G**OLDEN EAGLES, symbolic of outstanding merit among the U. S. motion pictures chosen for overseas film festivals in 1966, have been awarded to 120 films by the Council on International Nontheatrical (Film) Events. Selected by CINE from among hundreds of films reviewed by some 300 jurors in 23 committees across the country prior to their final judging in Washington, D. C. last month, the films are destined to show at over 50 overseas festivals during the year.

The recent winner of the Academy of Motion Picture Arts and Sciences "Oscar" as that group's choice of the outstanding U. S. documentary film, *To Be Alive!*, was among the Golden Eagle winners. This original three-screen presentation sponsored by Johnson's Wax at the New York World's Fair was submitted in a new composite single 70mm version. It was produced by Francis Thompson.

#### Winners of Multiple Awards

Other leading producers and sponsors who received multiple Golden Eagles include Audio Productions (for *Energy Unlimited*, a National Coal Association film and *Sunrise at Eastern*, produced

## Cite 120 Films to Represent U. S. Abroad

### Select Outstanding Sponsored Films for Overseas Events

for Eastern Air Lines): Larry Madison Productions (for *Beyond All Barriers*, American Telephone & Telegraph Co.; *Wild Heritage*, Remington Arms Company; and *Wild Rivers*, Humble Oil & Refining Co.); Henry Strauss & Co., (for *A Different Drum*, American Medical Association; and *Wings to Alaska*, Pan American Airways); and Vision Associates, (for *Portrait of a Disadvantaged Child-Tommy Knight*, McGraw-Hill Book Company and *Point of View*, National Tuberculosis Association).

Homer Groening, Portland, Oregon, scored with two Jantzen, Inc.-sponsored films, *Surfboards*, *Skateboards*, etc. and *Tag*. John Savage, New York producer, won Golden Eagles for *Three Parts of Gaul*, sponsored by the French Government Tourist Office and *Two Worlds of Scandinavia*, sponsored by the Scandinavian Travel Commission.

#### Three AT&T Films Are Cited

Parthenon Pictures' *Slips and Falls* (winner of National Safety bronze plaque honors) won another Golden Eagle for its sponsor,

AT&T, and that company received a third Golden Eagle when the Jerry Fairbanks production *If An Elephant Answers* was cited.

Aegis Productions' film on *Fertility Control*, sponsored by Eli Lilly and Company, was a Golden Eagle winner and Dynamic Films' *Indianapolis 500—1965* was a winner for its sponsor, Montgomery Ward & Co. The Jam Handy Organization's motion picture, *Examination of Reflexes*, won a Golden Eagle for its sponsor, Parke, Davis & Company.

#### "ESS"—One of Year's Best

One of the outstanding industrial-technical motion pictures submitted this year (and a Golden Eagle winner) was *ESS*, produced by Pelican Motion Pictures for the Western Electric Company. Gilbert Altschul Productions' *California* won honors for the Santa Fe Railway. Sturgis-Grant Productions film, *Cardiac Failure in Infancy*, produced for the American Heart Association, was a Golden Eagle winner.

Bay State Film Productions' *The Atom and Eve*, sponsored by Connecticut Yankee Atomic

Power Company, was a triple honor winner and another educational film, *Selective Renalography*, produced by the A. S. Corporation for Eaton Laboratories was also given the Golden Eagle.

#### Films from API, N.Y. Tir

*Time to Live*, produced by Bransby Productions for the American Petroleum Institute and *The Wide Window of Mr. A.* created by Spectrum Associates for The New York Times were also worthy of note on the Golden Eagle winners.

According to CINE's new president, Alden Livingston, "next year we see more inventiveness of the motion picture camera film makers. Their films are winners for the United States international competition at just what has been called our Olympic team of films."

#### Present Awards on Nov. 11

CINE awards and international prizes will be presented on November 18 at a ceremony held in the National Education Association auditorium in Washington, D. C. Last year, U. S. entries received more than 70 citations and honor certificates; more than 50 international theaters where these films were shown.

## PROJECTION FEATURES NO OTHER SYSTEM HAS!

### HPI GROUPSHOW REAR PROJECTION SCREENS

If you use rear projection just to beat room darkening problems, you're wasting 90% of your investment. Only HPI Groupshow Rear Projection Screens guarantee all these advantages . . .

- One Hand Portability—On Foot, In Car, Flying . . . exclusive folding action permits HPI Groupshow to store or go anywhere.
- No "Extra" Wide Angle Lenses—No Image Loss . . . all HPI Groupshow Screens operate with lenses in existing projectors with all the image quality of the original optical system.
- Removes Distracting Noise And Movement Of Projectors . . . standard lenses allow separation of projector from HPI Groupshow—can be hidden from audience if desired.
- Examine Images Close Up Without Shadow, Grain or Fabric Patterns . . . normal for HPI Groupshow—impossible with front projection.
- All Projected Material Accepted Without Cut-Off . . . exclusive square format of HPI Groupshow yields maximum image size for movies, film strip and slides—horizontal and vertical.

AN INTERNATIONAL REPORT  
 7th International Industrial Film Festival Opens in Venice Sept. 13

The Seventh International Industrial Film Festival, sponsored by the Confederation of Industrial Federations of Europe (CIFE), will be held in Venice, Italy from September 13th through the 18th. Giacomo Guiglia, of the national host group, the General Confederation of Italian Industry, confirmed these dates to BUSINESS SCREEN late last month.

U. S. representation in the Industrial Film competition is under the official auspices of the National Association of Manufacturers. A special committee recently assisted the NAM in selecting the 15 films which will represent the United States at Venice. All entries must be cleared through national manufacturer organizations in the countries which enter this worldwide competition.

One of the outstanding films the U.S. expects to show at Venice is *To Be Alive*, Johnson Wax' production which was the hit of the New York World's Fair during its two-year run in the Golden Rondelle theater on Flushing Meadow. This Francis Thompson-Alexander Hammid production was originally a three-screen presentation but a new composite 70mm version has now been made. *To Be Alive* won the Academy Award "Oscar" as the best U.S. documentary production of 1965 on April 18th and has just received the "Golden Eagle" award from the Council on International Non-theatrical Events to whom the 70mm composite print was sent. •

Movielab's President Exploring the Overseas Processing Market  
 Movielab, Inc. is giving serious consideration to the expansion of its film processing activities into overseas markets. This disclosure

was made by company president Saul Jeffee before his departure early in April for a three-week trip to six major cities in Europe and Asia.

Jeffee will also explore the possibilities and potential of laboratory operations in Turkey and Israel. Conferences have been scheduled in Tel Aviv and Istanbul for Jeffee with government and private financial interests in relation to native film production in these countries.

Stopovers have also been arranged in London, Paris, Rome and Madrid, where the Movielab president has meetings set up with European and American producers currently shooting in or rearing productions for locales abroad. •

PEOPLE AND EVENTS IN FOCUS

(CONTINUED FROM THE PRECEDING PAGE 20)  
recently, we met with Herb Farmer of the USC who was in the party.

Aside from the impressions noted in his visit with the IFPA (see JOURNAL pages), Herb found the Russian Palace of Congresses especially interesting. This 6,000 seat hall is used to present opera, ballet and for official gatherings. It has 6,000 loudspeakers, one in back of every seat in the auditorium. In addition, the arm of every chair has an earphone and a 14-channel, simultaneous translation system for multi-lingual conferences. Another complete sound system backstage is used for motion picture presentations. The Palace also has loudspeakers for its five-channel stereo sound system and microphones in the floor for radio broadcast use.

Some other Russian innovations not seen in the U. S.:

A government-supported central school, the All-Union State Film Institute for Cinematography, where creative film people (including directors of photography, writers, editors, etc.) are trained for film propaganda work throughout the world.

There's more emphasis on photography in the pure sciences — anthropology, archaeology, etc.

And there's an abundance of technical research equipment at the universities where there is much instruction in specialized fields of microphotography, high-speed instrumentation, etc.

MODERN TOGETHER WITH VACUUMATE NOW BRING DIRECTLY TO THE WEST THE TECHNICAL SKILL THAT HAS MADE NO-EN INTERNATIONALLY POPULAR WHEREVER 8mm or 16mm LOOP PROJECTION CARTRIDGE LOADED FILMS ARE USED.

To keep pace with the growing demand for NO-EN from west coast film producers, laboratories and users.

Modern and NO-EN provide industry with direct local access to the technical "know-how" and trained personnel necessary to give optimum service and treatment for endless loop projection cartridge loaded films.

To provide quicker delivery to laboratories and users in the west.

**NO-EN MAKES THE DIFFERENCE:**

the difference of meeting a universal demand for a treatment that insures smooth, uninterrupted trouble free showings and extends the life of the prints, the difference of complete customer satisfaction . . . AND above all the difference of widespread NO-EN reputation for unquestioned performance. These are the rich advantages you enjoy when you use NO-EN film treatment on your continuous projection films.

New Zealand's Leading Sponsored Film Distributor on Visit to U. S.

Derek Price, director of Inforfilm New Zealand, the leading distributor of sponsored films in that country, has been visiting the United States for the past few weeks to survey film distribution trends here.

In an interview with **BUSINESS SCREENS** at the offices of Modern Talking Picture Service in New York (the U.S. member of the international Inforfilm organization) Mr. Price told us that New Zealand currently has 6,500 film-using audiences — 3,300 schools and 3,200 general public adult groups. Last year, his company reached 279,000 persons in direct showings of sponsored films, in addition to audiences gained through theatre bookings and showings on New Zealand's four television stations. The distributor has over 200 titles now in circulation.

### Few U.S. Govt. Films Shown

Mr. Price noted that while a number of American business films had been successful in New Zealand, the use of U.S. government films is extremely small. The U.S. Information Agency has made little effort to reach New Zealand audiences — merely turns over a very limited number of prints to the N.Z. government library, "where they do little more than gather dust."

In contrast to this, over 900 titles of Russian scientific and cul-

Derek Price (ctr), director of Inforfilm New Zealand, pictured with (l. to r.) Ralph Del Coro (left) and president Carl Lenz (right) during his visit.

tural films are reaching wide audiences throughout the Commonwealth. These films, as well as those supplied by Poland, Hungary, Czechoslovakia, Bulgaria and China, are distributed by Ian Mitchell of Modern Films, Auckland. The films are very well publicized and in many cases groups are able to borrow projectors for showing the films at no charge. Mr. Price said that it was, in fact, much easier to obtain cultural and scientific films from Bulgaria, for example, than any American film material—this in a country with a long tradition of close friendship for the U.S.!

### Cannot Bar Factual Pictures

The official attitude of the New Zealand government in regards to the import of 16mm films is to maintain a strict censorship, but

as long as the communist-sponsored films are factual and non-inflammatory, they cannot be barred.

Not only the communist countries are actively promoting themselves through cultural and scientific film programs in New Zealand. Several other nations have extensive libraries, as well. For instance, West Germany currently has 30 libraries in active circulation in New Zealand.

In New Zealand, Mr. Price said, one rarely sees any U.S. — either group showings, theatres, or TV. The American image — as represented only by old wood features on television.

It would almost seem that the best factual films are only destined to be shown in areas where isolationism to U.S. policies is not spread and that we care little about providing useful and informative films for friendly countries, but want them and need them.

\* \* \*

Euroservice, in Paris, to provide Counsel on Overseas Arrangements. Associated Film Consultants, New York, has established offices in Paris, France with Mrs. Dorothy Griffith Wiart as director. Under the name of Euroservice, the company will provide geographic counseling and arrangement services on the continent for American public relations interests and film producers.

AFC's Euroservice began negotiations with film assignments in fashion for Sears, Roebuck and home furnishings for Peppercorn.

Mrs. Wiart has been head of Paris advertising agency, film producer, industrial fashion consultant, and magazine editor.

Euroservice marks the expansion announced this year by Associated Film Consultants.

**"TRAINING  
 CENTER?"**

MODEL 2000 16/16

## SIEMENS SIXTEEN/SIXTEEN

Yes! The Siemens 2000 16 16 is a **portable** projector that can provide your training program with all the flexibility and capability of double-system sound. It's a fine optical magnetic sound projector, mechanically interlocked with a 16mm magnetic deck. Whether used as a single-system or a double-system, this unique machine provides theatre-impact performance. For training programs, the versatility of the Siemens 2000 16 16 is practically unlimited—it makes single-system or adaptable double-system sound, fast, easy and inexpensive.

Record, re-record, playback—make effective sound tracks for workprints, or original camera footage—make one sound track or several—**you can do them all on the same machine.** For instance—you can have a sound track for Engineering and another for Production—one for the old timers and another for student beginners. And, because changes are quick and easy, your sound track can be as up-to-date as "tomorrow."

Because the Siemens 2000 16 16 is portable, you can put it to work in your studio—or on the run—in office, plant, classroom or wherever. Whether it's to be your only projector or supplement to existing equipment, this versatile machine is the time saving, money saving answer to dozens of training film problems. **WRITE FOR COMPLETE INFORMATION.**

# Monkey Business?

We have monkey business in our latest Copley Productions films, "Expedition Borneo," "San Diego Zoo," and "Scientific Safari." You'll be amused at the antics of these charming primates and amazed at the many ways they serve mankind.

See San Diego's world-famed zoo. See thrilling shots of Borneo and African wildlife.

See a biomedical engineer, a cardiovascular psychologist, a behavioral psychologist, a surgeon, and a hunter on safari in the heart of Africa.

All Copley Productions films are in color, sound-on film, 16mm, and are available without charge to educational, civic and business organizations. Please direct inquiries to the nearest Copley Productions distribution center.

BUSINESS SCREENING

## la Films Breaks Ground for New Miami Plant

WEST FLORIDA, moving into new prominence as an important center of film and television production, gained fresh impetus on April 25 as officials of Reela Films, Inc. broke ground for the company's new film service and processing laboratory at 1700 Third Street and First Avenue, Miami.

Richard Wolfson, president of Wometco Enterprises, Inc., of Miami, is a key division, was expected to greet a number of distinguished personalities including Herbert Taylor, Geraldine Fitzgerald, and Stud Schulberg and producer John Hugh.

Richard (Ted) Sack, vice-president and general manager of Reela Films, showed the attendees something new in the breaking ideas. Instead of the customary gold shovel, a small amount of explosives was used to dramatize the anticipated explosion of the motion picture industry in Florida.

Reela will handle everything from second TV commercials to length feature films for theatrical exhibition. The facility will have equipment for videotape recording, sound recording, animation, titling. It will have six editing rooms; four of the newest color cameras; two 500-square-foot screening and recording rooms and a fully-equipped "still" photographic lab.

Processing equipment to be installed will be the latest high-speed spray units for 16mm and black and white and 16mm color film. When completed in September, Reela will be able to process 300,000 feet of film each day. The division began operations in Miami in 1951 as a division of Wometco Enterprises, Inc. Wometco also has a film production subsid-

ary, Canawest Film Productions, located in Vancouver, British Columbia.

**Seymour Zweibel a Heart Victim; Susan Wayne Heads Gotham Co's.**  
Seymour Zweibel, president of Seymour Zweibel Productions, Inc., New York, died suddenly on April 14 of a heart attack.

He had been in the film industry since 1940 when he began his career at Universal Pictures. After time out for duty as an Intelligence Officer in the U.S. Army during the war, and two years as a producer of theatrical shows on Broadway, Mr. Zweibel was encouraged to re-enter the business film industry again by the late Merle Johnson, motion picture manager of General Motors Corp. The Zweibel company made a series of films for GM in the early 1950's.

Susan Wayne, who now succeeds Mr. Zweibel as president of Gotham Film Productions, Seymour Zweibel Productions and Gotham TV Productions, joined those companies in 1952 as musical director on four General Motors films.

For the past several years, while Mr. Zweibel had conducted the business activities of the three associated companies, Miss Wayne has been vice-president in charge of all motion picture and slidefilm production for such clients as American Telephone & Telegraph Co., Dun & Bradstreet, First National City Bank, W.T. Grant Co., New York Telephone Co., and J.C. Penney Co.

Miss Wayne is the winner of several awards from the National Visual Presentation Association and the American Film Festival. She is a member of the Board of Directors of the New York City Chapter of American Women in Radio and Television.

## the news perspective

The joyous experiences in "To Be Alive" were shared by Academy Awards voters who voted this Johnson's Wax film the "best short subject of year."

### "To Be Alive!" Wins Oscar as Best Short Film

THE ACADEMY AWARD "Oscar" given to *To Be Alive!* as the year's best documentary short subject was the factual film industry's most memorable highlight of the annual Academy of Motion Picture Arts and Sciences' program on Monday evening, April 18th. But it is also noteworthy that this show was telecast in color for the first time under the relevant sponsorship of the Eastman Kodak Company.

The millions across the land who viewed this spectacle saw some of the year's finest color commercials, many of them increasing public awareness of photography's role in business, industry, education and science. Reported to have cost the sponsor a cool \$1 1/2 million, the Academy Awards program was, for the first time in its television phase, at least, as nearly related to its subject matter as any product presented on color television will ever be.

History was made, again, when the Johnson's Wax-sponsored short subject which was the unquestioned "hit" of the New York World's Fair in its two-year run became the first such business-sponsored film in recent memory to win an Academy "Oscar." Its producers, Francis Thompson and Alexander

Hammond, created a filmic masterpiece worthy of the honor bestowed on *To Be Alive!* It had to be that good to take the "Oscar" away from Vision Associates' *Point of View*, another nominee, and to overcome the surprising interest shown in Random Film Productions' *The Forth Road Bridge*. If the latter film had won, the only two prints at large in the U. S. were in the Chicago offices of BUSINESS SCREENS!

Although no public homage was paid them on the Awards' telecast, honors for technical achievement were also given by the Academy. On recommendations made by its Scientific and Technical Awards Committee, Arthur J. Hatch of The Strong Electric Corporation received a Class II Plaque "for the design and development of an air-blown carbon arc projection lamp."

Stefan Kudelski received the other highly-merited technical achievement award plaque "for the design and development of the Nagra portable 1 1/4" tape recording system for motion picture sound recording."

Put the rest of this Academy show down as pure spectacle or sheer ballyhoo but it was fun to watch—fluffs, tears and all!

### HIGHLIGHTS OF ACADEMY'S SHOW

At left: a scene from one of the color television commercials used by Eastman Kodak on its Academy Awards' telecast. Uses of audiovisuals for business and education were promoted to an audience estimated as in the millions. At the right: Arthur J. Hatch, president of the Strong Electric Corporation, Toledo, who received a technical achievement award plaque for the development of the air-blown carbon arc projection lamp, now widely used

Illuminated transparencies in cube-shaped frames provide colorful "Photo Garden" atop the Kodak exhibit hall.

## "This is Photography" Eastman Kodak Company's New Exhibit Hall in Chicago's Museum of Science & Industry

**T**HE WONDERS and REACHES of photography will be seen through the years ahead by millions of visitors, youngsters and adults alike, who throng into Chicago's famed Museum of Science and Industry. On April 20th, Eastman Kodak fulfilled a long-dreamed-of mission with the dedication by the company's president, William S. Vaughn, of its wide-ranging, always fascinating, cavalcade of marvels in a "This Is Photography" exhibit hall.

Inscribed on the walls of the Museum rotunda are these words: "Science discerns the laws of nature and industry applies them to the needs of man." The discoveries of recent years which have carried crude photographic techniques of the past into far-reach-

ing areas of scientific progress are dramatically interpreted in this Kodak exhibit. Audiovisuals show and interpret images from space-borne satellites to magnified views deep within the electron microscope.

### Will Create New Customers

Visitors to this permanent new "World's Fair" of photography may re-live the past in projected history, examine the present and speculate upon the future. "This Is Photography" has meaning for all who serve and work with pictorial media as it stimulates the young to careers in the field and reminds adult visitors of audiovisuals' useful role in business, industry, education, science and the whole range of human activity. The pressing throngs of the New

York World's Fair permitted no time for the comprehension which can result from leisurely study of the fascinating exhibits within this skillfully-designed hall.

Fundamental principles are interpreted within its 8,500 square foot areas as each visitor first encounters a pin-hole camera — then advances to study the workings of lenses, camera apertures, motion pictures and sound on film. He sees these broad principles put to work in projected visuals, explained by taped sound.

### Tools for Time and Space

A Time Modifier demonstrates high speed and slow motion photography and its application in science and research. Under the Time Machine Dome, pictures "freeze" periods of time and bring

Time Modifier Exhibit (at right) when viewers see three motion picture sequences — simultaneously to demonstrate photography's ability to "slow down" high speed action or "speed up" slow action; all three frames show the same scene, one at normal speed, one much accelerated and one in slow motion.

In the Time Machine Dome (below) viewers see how photography can freeze or project a period in time as they activate any one of six visual presentations. Camera slide projections, programmed by viewer-operated controls, offer scope ranging from Civil War to Wright Brothers' first flight.

A Veritable "World's Fair" of Audiovisuals in Action at the Heart of America.

William S. Vaughn, president Eastman Kodak Company (left) Major Lenox R. Lohr, president Museum of Science and Industry opening of "This Is Photography"

back history's epic even "Dimensions" exhibit carried projected images from a view of earth to the other visible microscopic enlarged a virus, all in directly-logical sequence.

Other exhibits feature recording of invisible light space age miniaturization electronic circuitry via photo-

the aerial panorama of  
southside, the making  
color printing plates and  
applications of photography in  
various aspects of business,  
and education.

**Garden and Galleries**

There are two photo galleries  
"photo garden" behind the  
de Colorama which greets  
the exhibit hall.

More than three million persons  
visit the Museum in the city's  
Central Park every year. Some  
of these are students on  
trips sponsored by schools, col-  
lege and a myriad of youth groups.

As photography stores, records,  
penetrates, amplifies, extends and  
compresses human knowledge, so  
does "This Is Photography" as it  
brings a greater appreciation of  
this medium's vastly-increased  
scope. The technical skill behind  
the scenes of this exhibit hall are  
manifest; every relevant area has  
been programmed for tape con-  
trol; projection is as near perfect  
as this manufacturer's skill could  
make it; three motion picture  
shows are featured and three others  
use a number of automated Car-  
rousel slide projectors to present  
brilliant color images.

*Dimension Exhibit shows photography's tremendous range of magnification  
or compression of physical world. Scenes progressively close up from far-off  
satellite's view of earth to magnified image of invisible bacteria cluster.*

*Sound-on-film is demonstrated in "Sound Trough" exhibit. While  
viewing 16mm motion picture of three jazz musicians, the viewer can cut out  
sound from any of the instruments by using his hand to intercept beam  
of light projected downward in front of musician playing that instrument.*

*Iris Action Exhibit shows viewer the way in which a camera lens opening  
diaphragm functions like a human eye and then shows his own eye reacting.*

*Control panel in "nerve center" of "This Is Photography" exhibit. Left to right:  
William F. Ewald, Kodak projects engineer, Dr. Jonathan Karas, a consultant on exhibit, and ex-  
hibits designer Alex Cranston, vice-president of De Martin Marona Associates.*

Applications of photography are demonstrated below, and career interests  
stimulated as young viewers operate slide projectors to see how photography  
serves industry, education and science, as well as providing home recreation.

Today you've got to move fast  
So Beckman & Whitley made the C

# get all the action!

## Ultra-compact CM 16 sound camera.

At last a truly portable 16mm sound camera for professionals. The CM16 is 15 pounds light with zoom lens and 400 feet of film. It's slim and compact to move as fast as the action. Yet, built into this small, light package are many new performance advantages never before available in a professional 16mm sound camera. For example:

**Single System Plus Double System Sound** The CM16 is designed to record superior single system sound and at the same time provide double system sound recording capability. Continuous film movement and prealigned record and playback heads ensure top quality magnetic sound on pre-stripped film. Wow and flutter are less than 0.3 percent rms from .5 to 250 cps. The low distortion three channel mixer amplifier provides 50 to 10,000 cps response,  $\pm 1.5$  db. For double system recording the camera can be operated in sync with tape or film sound recorders when run off either battery pack or 110V AC 60 cycle line power.

**New Internal Reflex Viewing and Focusing** Unique reflex optics permit internal through-the-lens viewing and focusing at all times. The objective lens iris can always be kept wide open for full brilliance viewing because the camera has its own internal, independent iris to control film exposure.

**New Pin-Registered Continuous Moving Film** A new, classically simple film movement outmodes the intermittent stop-start mechanism. In the CM16 camera, film flows smoothly, quietly and continuously, obtaining superior sound and picture quality. During operation the film is engaged by a tracking register pin which moves the image in perfect registration with the film edge and perforations. Also, compared to

previous movements, there is far less mechanism for lower maintenance and greater reliability.

**New Versatile Power Pack** The new Model 200D power pack, built exclusively for Beckman & Whitley by Frezzolini, allows the CM16 to be operated on any 50 or 60 cycle power source from 110 to 220V without changing motors or gears. A special crystal frequency control module, accurate to 5 parts per million, permits two or more CM16 cameras to be operated in perfect sync.

**Other Advantages** Self-blipped—total camera noise 38 db @ 3 feet. Filter slot for three thicknesses of gelatin. Full 180° forward vision. Cameraman sound monitor. Low 20 watt power drain. Standard "C" lens mount. -30° F to 120° F operating range. Quick-change 200, 400 and 1200 foot magazines.

**Field Tested for Performance and Reliability** Top pros have field tested the CM16 for two years to prove its performance and reliability under the most rugged and difficult operating conditions.

To build the CM16 Beckman & Whitley drew on its experience and technology as the largest manufacturer of ultra high speed cameras for scientific research. The result is a camera for the technical perfectionist—a camera for the pro on the go.

*For more information contact: Cine Products, Beckman & Whitley, Inc., 441 Whisman Road, Mountain View, Calif. 94040, Phone (415) 968-6220.*

*Beckman & Whitley*  
A SUBSIDIARY OF TECHNICAL OPERATIONS INC.

IBM Board Chairman Thomas J. Watson, Jr. (at extreme left) in filmed conversation in company's "Self-Portrait."

## IBM: a Candid Self-Appraisal

Filmic "Self-Portrait" of Its People Expressing Their Ideas Shown on International Business Machines' 50th Anniversary

ON THE OCCASION of its 50th Anniversary last year, International Business Machines Corp. sponsored a filmic view of itself and its people. *IBM—A Self Portrait* is an unusually candid self-appraisal of the giant company as seen and recorded by two of today's most successful practitioners of the cinema verite genre, Al and David Maysles.

The half-hour black and white picture was shot over a three-month period at IBM plants in Poughkeepsie, New York. It shows the character of the company by putting many of its bright, alert and aggressive people on camera — catches them saying a lot of off-beat, non-conformist things in unguarded moments. The effect is that IBM is a dynamic, surging enterprise which consists of and depends on the vitality of its people more than in most big companies. It was screened at 50th Anniversary dinners which the company held at its many plants and offices around the world.

### Remain Servants of Subject

The Maysles brothers (Maysles Films, Inc., of New York) are Al, as the cinematographer and David, as the sound recordist. It is their basic theory, as they have demonstrated in their widely discussed TV films on the Beatles and on Truman Capote, that they can best perform their cinematic function by constantly remaining serv-

ants of the subject rather than the other way around.

The pair do not *direct* their subjects but record them in a perceptive series of happenings. Which is not to say that they shoot at random or without careful planning. The Maysles have trained themselves to *find* situations which make drama. They say that they never reconstruct a situation, never tamper or impose on what is before the camera.

For instance, they would ask their liaison man at IBM, Bob Slade, "what will be going on at IBM this afternoon at 4 PM. . . what is exciting . . . where is the action?" The camera pokes into heady situations all over the plant — including one argumentative

IBM people confer, soon learn to disregard film makers, as David and Al Maysles record the scene for the company's "Self-Portrait."

conference which generates sparks.

The Maysles maintain that in a few minutes time they can become so much a part of the background (they rarely speak, only indicate how they plan to work by attitudes) that most of their "subjects" forget about the camera. At IBM, anyway, David Maysles says, people always had more important things to do than be aware of a camera. It would be briefly explained by the liaison man that "these fellows are going to shoot some movies — don't pay any attention to them."

### Like Part of the Furniture

Al Maysles says: "the problem of having people notice the camera is not as big as you might think. If you are overly concerned with the presence of the camera, the people you are filming will be concerned about it, too. The camera stays on my shoulder all the time. Sometimes I'm shooting with it and sometimes I'm not. Since the camera is silent and remains in the same position all day long, they can't tell. If they were to think about the camera all the time, they'd get very tired. It gets to be like part of the furniture in the room."

In this case, the cinematic "furniture" has contributed a great deal to the success of Maysles' films. It was self-developed during years of trial and error. The 16mm self-blimped camera (made up of parts of many predecessors) weighs 30 pounds but is so well-balanced that it can be carried about for long periods of time without fatigue. A new version will weigh only 12 pounds, nonetheless. The present gear is constructed so that the operator can

Excerpts from Mr. Thomas' conversation in "Self-Portrait" — I think if you were a young man coming in to IBM . . . I would like there was one precious ingredient that most twenty-one year-old people had, and that most forty-year-old people did not have, and that the very effective twenty-year-olds were able to protect through the years—and that is a sort of sense of self-respect which would prevent them from compromising their ideas to the crowd beyond a certain point. I talk a lot around here about "wild ducks", and people know a good deal about my "wild ducks" but it takes a few wild ducks to make any business go, and it takes one or two wild ducks to make a department in a business because if you don't have the fellows with the new ideas, they are willing to buck the man in the trends, if you will, and show them into doing something a little better—if you don't have the kind of people, the business pretty well close down. So that I would tell a twenty-year-old IBMer what I've learned a lot of twenty-one year-old people, and that is that the priceless ingredient that a young man has when he starts in business is that sense of not compromising beyond a certain point. Life is a continual compromise, you have to know when to compromise to protect the priceless ingredient I'm talking about. There are people in business who will gladly say black is white in order to get everything go smoothly . . .

see over the top of it at a glance thus easily anticipate movement. It contains a 400-foot magazine built-on exposure meter and a self-contained photo lamp.

Camera and modified Nikon recorder used by the team are physically connected. Synchronization is achieved by running the camera from a 5-battery pack, converted from 110 volts AC by transformer and rectifier, and regulated to 60 cycles by a "tuning fork" system similar to that used in the Accutron.

Meanwhile, the recorder contains a 60-cycle "tuning fork" pulse which is recorded on the edge of the tape itself. The controls playback speed which are recording on 16mm sprocket tape. The system provides completely accurate synchronization.

NBC producer Irving G. Thalberg received credit for the production.

# Film Examines the American Jury System

In a 27 Minutes of Uncompromising Realism, "The True and the Just" Achieves Both Appreciation and Comprehension of Court Procedures

THE MANING AND WORKINGS of the American jury system are examined in an important 27-minute black & white motion picture conceived by the Departmental Committee for Court Administration, First Judicial District of New York State and its chair, Presiding Justice Bernard Botwin.

Produced under a Ford Foundation grant by Audio Productions, Inc., *The True and the Just* proceeds with bell-like clarity into this untouched area of American justice. It is concluded, the viewer has achieved understanding and appreciation of this heritage as close to pride, if not exaltation.

## "One of Bright Faces Worn by Mankind"

"It is not a strange and wonderful thing," the narrator, breaking into the lively details of a jury in the opening sequence of *The True and the Just*, "that all these people should be arguing, weighing, analysing—deciding, without hope of profit or gain on the part of them at considerable personal expense—all in the pursuit of truth, of justice? It is one of the bright faces worn by man-

The film was created for distribution to schools and television — and for showings in courthouses to prospective jurors, in law schools, colleges, high schools and before juries. Its purpose: "to remind Americans of the dynamic role played by the juror and the great importance to justice itself of the jury system."

## Look at the System As It Really Is

The purpose was to be accomplished not by fireworks and patriotic rhetoric, but by an intensely realistic examination of the system as it really happens.

To achieve this realism, Audio's award-winning director, Hans Mandell, and cameraman, Leo Zingale went right into actual courtrooms around the country. Beginning with the reading of jury notices by several prospectors (the film realistically includes the humiliations as well as the glories of the process), the camera moves into the main jury room of New York County's Supreme Court at 60 Center Street. It captures the formation of an actual jury panel, a couple of hundred people. From among these men and women, whom employees of the court was drawn from, the entire cast for the picture.

## Realism's Drama in the Film's Immediacy

Professional actors play the key roles of the attorneys, the two attorneys. The film's narrator is a perfect choice: E. G. Marshall, who starred in *The Defenders*, adds strength to the course of the documentary. Judge Arthur J. Streit played his life role. For added realism, about half of the film's dialogue was created on the spot, but the non-professionals never let Mandell down.

An example to support his contention that people always look real if you leave

them alone", occurred in a jury recess scene. One woman pulled out her collection of grandchildren pictures and showed them around, while a man began reading a book he brought along with him.

Using as a framework a fictitious litigation, civil rather than criminal because of its greater universality and somewhat greater complexity, each significant aspect of a trial by jury is permitted to evolve in its natural course.

## Follows the Key Procedures of a Trial

Starting with the selection of a panel, examinations of each juror and the challenging of some of these, key procedures of the typical trial begin to fall in place: the opening statements; case for the plaintiff and for the defendant (interspersed with examples of cross examination and the judge's role in deciding on permissible evidence); closing statements; judge's charge; jurors' deliberations; reaching of the verdict. All of the beautiful intricacies of justice which are so fortunately linked and meshed through centuries of evolution by the genius of pragmatic democracy into a smooth-running legal organism are part of the fabric and weave of this widely-useful picture.

In the highly-creative way in which it converts diffuse complexities into powerful, con-

E. G. Marshall, television and stage star, is the narrator of "The True and the Just" and one of the few professionals in film.

centrated simplicities, this film can be compared with the system which it explains. As clear and inevitable as a good trial lawyer's brief, the action marches forward, uncluttered, searching and convincing. One can believe E. G. Marshall when he says:

*"There is a sense of fulfillment in serving, pleasure springing from the realization that they are making a contribution both meaningful and purposeful. Twelve men and women find more hope, more good inside themselves than they knew existed."*

Distribution of *The True and the Just* is being handled by A. A. Schechter Associates, Inc., 551 Fifth Avenue in New York City. •

The film's opening sequences show the selection of a jury panel in the main jury room of New York County's Supreme Court Building.

Nearly half of the script was created on the spot, adding to the film's sense of reality and immediacy, which characterizes content.

Only four of the twelve jurors on this panel are professional actors, but all of them reenact typical experiences with believability.

The attorney is a professional actor but the bailiff, court reporter and eight of the jurors in the picture are all non-professionals.

*This Film Program* **“People Sell People”**  
*is Helping Retailers’*

EVERY DAY thousands of people walk into retail stores . . . and walk out again with empty hands or with only part of what they wanted and were ready to buy. Many of these people could have been sold, or sold more completely, if only someone had the desire and ability to sell them. These “might-have-been” customers really walked out with “might-have-been” profits.

To help solve this problem, a series of four sales training films, called the *People Sell People* program, has recently been offered to department stores and other retail establishments by Modern Talking Picture Service. The series, created and produced under the supervision of Anne Saum Associates, recognizes that a crisis in retailing has developed, and provides a way for store owners and managers to meet the challenge with a minimum expense of time and money.

This first series was produced in color by Calvin Productions at their Kansas City studio.

**Right Attitude Makes People Want to Buy**

The four films and supplementary material in the program stimulates in sales personnel the attitudes and personal relations which make people *want* to buy and to become loyal, repeating customers. The program helps retailers encourage sales people to raise their sights beyond the level of “order-taking” and to make

*“Goodwill Ambassadors” deals with the concept of personalized service as the prime motivator of customer loyalty and continuing patronage.*

each contact with each customer the means for a fully productive sale.

In the broadest terms, the program can help retail stores increase individual sales productivity and build repeat business. It can also develop in salespeople the ability to realize the full potential of every encounter with customers for both immediate and future sales.

**Specific Objectives of This Program**

For salespeople — and for their supervisors with the responsibility for providing sales leadership — the program is built around the following specific objectives:

. . . to develop understanding of the requirements and rewards of individualized, service-conscious, customer-oriented selling;

. . . to increase awareness of the sales opportunities and potential which exist in every person-to-person contact with a customer;

. . . to define standards for a completely successful sale and to motivate participants to meet these standards;

. . . to encourage a determined effort to satisfy each customer’s requests and needs with available merchandise;

. . . to maintain an active interest in providing the kind of personalized service that builds customer goodwill and encourages repeat business.

*“The People Sell People” was produced with a full awareness of the problems inherent in*

*“Nothing But Lookers” emphasizes the positive effect of a helpful person-to-person relationship with the customer in successful selling.*

today’s retail training conditions and price vis-a-vis training methods. The trend toward longer shopping days, and an increased number of night openings, necessitates the use of shifts of both salespeople and supervisory personnel. In many stores, the “three phase” system is prevalent. There is virtually no part of the day when the total store force is present nor is there continuity of supervision.

The six-day shopping week and the five-day work week obviate almost all possibility of store personnel attendance on any single day.

**Stores Hire More Part-Time Personnel**

The flow of customer traffic, the pressure for expense control, the labor market conditions have caused a strong increase in the use of part-time personnel.

*“The Sales Building Role” and its supplementary material presents the second condition of a successful sale: satisfying the customer’s want*

tion of “part-time” or “short-time” sales personnel. These people are employed for peak hours — rarely, if ever, report for work to the store opening hour.

Legal requirements with respect to minimum wages and over-time pay have imposed severe pressures on retail management. These pressures create need for productivity in every payroll hour, necessitate that sales schedules be adjusted to times potential sales are productive in terms of sales, require that all sales be effected within the hours at which the employee works at his normal rate of pay.

**Training of Large Groups is Difficult**

These conditions minimize the long-term value of “mass training” — training sessions conducted for large numbers of sales personnel.

*“You’ve Sold Me, Mrs. Marlowe” presents the total concept of a successful sale. The program introduces philosophy behind the program.*

increased emphasis on individual training, self-education, and training programs available to conduct with small groups, by different trainers in a number of different locations.

*People Sell People* program is flexible to work with small groups, or with individuals. It involves involvement and participation by all. It is complete, with built-in motivation. It is necessary to guide the trainer in the conduct of group sessions — to guide the individual trainee through the process of self-education.

*People Sell People* is available in 16mm for large groups and also in 8mm automatic cartridge projectors that enable the program to be taken to the salesforce rather than taking the salesforce to the meeting. This flexibility of format answers the logistic problems in today's retailing structure.

*People Sell People* films were carefully selected to assure a long working life. Staple materials, impressionistic backgrounds, and clean lines insure that the films will not date 8 or 10 years from now.

Such stores as Saks Fifth Avenue, J. P. S. Miller, Korvette, Macy's and Gimbels

annual, meeting plan and study guides included in "People Sell People" package.

New York, Filene's in Boston, and Marshall Field's in Chicago have been using the films, and with much success.

The complete *People Sell People* program includes a manual and meeting plans, four films in running time from 6½ to 8½ minutes in running time, take-away pamphlets and study guides. It is packaged and distributed nationwide through the Modern Talking Picture Service from 100 cities throughout the United States.

The program is made available in two ways: purchase of the entire package for \$350, or rental of the package for a period of one month for a rental of \$150. All required projection equipment, screens, 16mm projector, 8mm cartridge-load Fairchild Mark IV projector, also available from Modern offices in 100 cities for \$95 a week.

Total Range of Company's Activities Shown to Employees and the Public

SUPPOSE YOU'RE A BIG ORGANIZATION, with facilities and customers all over the globe. How do you present in concise and exciting form the overall story of your complex manufacturing, merchandising and marketing activities? And in the planning of such an ambitious presentation, how do you make it equally effective with both domestic and overseas audiences? Further, in a vital, ever-expanding economy, how do you keep the undertaking abreast of the latest developments worldwide?

At Chemstrand Company headquarters in New York, management wrestled with these difficult questions and, after considerable study, came up with the answers. This marked the birth of their important new motion picture, *This Is Chemstrand*. The story behind the making of this film has significance to both film-makers and their clients.

### Oriented to Merchandising and Marketing

By tradition, the Monsanto Company's Chemstrand Company Division — an international giant in chemical fiber production — is merchandising and marketing oriented. Much company effort is devoted to associating Chemstrand's brands with well known manufacturer's brands at the consumer level. Another aspect of this policy is reflected in the lead which Chemstrand has taken in the establishing of realistic quality-controlled programs for its products. Still another area of company responsibility is in new product development and fiber modifications.

These important merchandising and marketing activities — plus the involved effort going into manufacture — are part of the Chemstrand story. An understanding, by both customers and employees, of the significance of these inter-related functions is of great interest and consequence to Chemstrand.

### Bringing It Into Perspective of Viewer

Previously, the company had been relying on other ways of conveying its message, prin-

cipal one of which was a slide presentation with commentary delivered live by an executive. But the slides, helpful as they were in the beginning, were proving more and more inadequate as time progressed. The more complex the organization's activities became, the more difficult was the task of describing them in right perspective for the various audiences.

In the words of T.V. "Ted" Shumeyko, Director of Public Relations for the Chemstrand Company: "In the large corporate structure today, there is fast growing need for a rapid, yet thorough means of communication — describing what the company *is* and what it *does*. The internal and external uses for such a profile are almost limitless."

### Could a Motion Picture Tell This Story?

As part of his public relations responsibility, Mr. Shumeyko has been engaged in the making of many motion pictures, each usually devoted to different aspects of the diverse Chemstrand operation. But, for a variety of reasons, the total range of the company's activities had never before been compressed into one motion picture presentation.

The enormous success which the company has enjoyed with its individual film presentations led, logically, to some internal research. With a dynamic, far-flung and constantly broadening organization such as Chemstrand, could the motion picture medium encompass the company's continuing biography?

### Combining Immediacy With Look to Future

"It was like trying to plan a family album, using not stills but motion picture instead," says Mr. Shumeyko. "We would have to anticipate future events so that the film could enjoy a long life. Also, production time would have to be reduced to the barest minimum to give the motion picture even greater immediacy. Yet we could not sacrifice quality in the slightest. It was a tall order, but we knew film was to be our medium. There's nothing that comes

Sid Milstein (at camera) and Aegis team lens a lovely English model against backdrop of London's House of Parliament. Garment on the girl is made of chemical fibers marketed by Chemstrand, Ltd.

# THIS IS CHEMSTRAND:

(CONTINUED FROM THE PRECEDING PAGE 39) close to rivaling it for effectiveness."

Into the planning sessions, besides Mr. Shumeyko, were called: Larry Wilson, Manager of Product Publicity for Chemstrand; Sid Milstein, president of Aegis Productions, film production company that has been turning out a series of motion pictures for Chemstrand; and Henry Poster, independent writer.

Out of these meetings came the concept and shooting outline for *This Is Chemstrand*. Refinements were made, and the time came swiftly to go into actual production.

## Filmed in the U.S., Europe and the Mid-East

Sid Milstein, who both directed *This Is Chemstrand* and was head cameraman, took his crew on location assignments that covered the United States, Europe and the Middle East. Accompanying them on most of the trip was Larry Wilson of Chemstrand.

Locations photographed included Pensacola, Florida; Decatur, Alabama; Greenwood, Greenville and Blacksburg, South Carolina; Raleigh-Durham, North Carolina; Rumford, Rhode Island; Chemstrand headquarters in the Empire State Building, New York City; London and Leicester, England; Dundonald, Scotland; Coleraine and Newtonabbey, Northern Ireland; Echternach, Luxembourg; Paris, France; Dusseldorf, West Germany; and Ashdod, Israel.

In the 22,000 mile trip covering the different Chemstrand facilities, more than 18,000 feet of 16mm color film were shot — in a period of just four weeks time!

"We were living in airplanes, with just brief stopovers at hotels," says Mr. Milstein. "To keep up the pace, we had to make shooting arrangements prior to our arrival in each locale."

## Chemstrand People Helped Scout Locations

To which Mr. Wilson adds: "Because we have the good fortune of having knowledgeable Chemstrand representatives in all these places, they were able to handle the pre-shooting details with dispatch. The camera crew required only a minimum of scouting. Their time was spent in actual filming instead."

To avoid repetition, different phases of the company's vast operation were shown from location to location. In one place it was the production of Chemstrand nylon. In another, it was Aerilan acrylic fiber. Still another locale

Camera crew photographs close-up of Aerilan acrylic fiber being extruded from spinnerette at huge Chemstrand complex in Decatur, Ala.

featured research and development operations — or sales, advertising and promotion activities.

With its varied production of thousands of types of yarns and fibers — plus its broad merchandising and marketing programs — Chemstrand presents many sides. The problem, of course, was to tie all these activities and far-flung facilities into one cohesive story. Further, some end uses of Chemstrand's products were to be demonstrated, both in the marketplace and with the ultimate consumer.

"We managed to avoid many of the clichés that so often creep into a corporate film," says Mr. Milstein. "We took the visual approach of an entertaining, fact-finding tour of Chemstrand with constant emphasis on: *what's in it for the audience?*"

## Conceived as an International Working Tool

Because of some unusual qualities possessed by the client, "*This Is Chemstrand*" was conceived as an *international* working tool, not as a domestic film adapted to overseas use.

Chemstrand's merchandising and marketing programs are structured on an international basis. Thus, when the film speaks of Blue "C" Nylon, or the Red "A" Warm Coat, or Action-wear, or Wear Dated apparel, or any other company program — these have as much significance overseas as they do in the United States. The same basic thinking applies everywhere.

Following the shooting, Hank Poster prepared the final script, working in conjunction with executives of Chemstrand, George Green

At script session (left to right): Larry Wilson, Chemstrand mgr. of product publicity; Sid Milstein, Aegis president; Hank Poster, film writer; and George Green, Chemstrand public relations consultant, discuss film points.

Associates, and Aegis. Because of an organizational setup that minimizes decision-by-committee, Chemstrand can answer questions quickly and directly. "It's a scriptwriter's dream come true," comments Poster.

So, just five weeks following completion of the script, the finished print was in Chemstrand's hands. Editing and music were under the guidance of Herbert Leventhal, Aegis V.P. and production manager.

## Internal Use of the Film at Home and Abroad

The film already is being given extensive use, both in and out of Chemstrand — in Europe, the Middle East as well as the United States.

"We did *This Is Chemstrand* for a number of reasons," says Mr. Shumeyko. "Within the

Two attractive Chemstrand employees in the company's Research Center in Raleigh, North Carolina, are leused by director Sid Milstein and Aegis cameraman Harry Shumeyko.

company, for example, the film is used to indoctrinate new personnel — to give them an idea of the worldwide scope of Chemstrand and its Monsanto parent. Even with Chemstrand's long standing, the film helps accomplish the same purpose. In addition, it helps people just where they and their departments fit into the total picture, where the product goes, how customers are serviced, etc. In fact, as a division of Monsanto, we know that the film will be used to tell other divisions about work at Chemstrand."

## Public Showings Are Even More Extensive

But, it's the outside applications that are even more extensive. *This Is Chemstrand* now being used for:

- 1) Company recruiting at schools and other organizations where.
- 2) Showings to customers when they visit the Chemstrand plant or research location to give them a total perspective.
- 3) Showings at customer locations.
- 4) Indoctrination of distributors, retailers, and others involved in the distributive chain of products made with Chemstrand fibers.
- 5) Community relations.
- 6) Showings to schools and other interest groups.
- 7) Organizations and groups from other countries.

## "It Helps Sell Chemstrand to the Viewer"

The list of uses, both domestic and international, goes on and on. The consensus of executive opinion at Chemstrand is that the film is exceeding their greatest hopes.

Says Mr. Shumeyko: "The important thing is that *This Is Chemstrand* communicates in so doing, it helps sell Chemstrand to the viewer no matter whether he be a customer, buyer or what have you.

"While it's true that most people who see *Chemstrand*, we have found that most are surprised to learn that we are big and more diversified than they ever imagined. This surprised group includes some of our best personnel as well!"

Overseas demand for *This Is Chemstrand* is so great that German and French soundtracks have been added, and the film is now being used throughout Western Europe — in the Outer Seven as well as the Common Market countries. Because of the advance planning that went into production, no major changes were necessary when translating the script.

An advance showing of *This Is Chemstrand*

held in Brighton, England. The occasion was Chemstrand Ltd's. Marketing Meeting, attended by representatives from all over Europe. The reception was so enthusiastic that Chemstrand fibers representatives immediately began demanding prints for use within their own countries.

The German language version of *This Is Chemstrand* premiered at the Cologne Show in January 1966. This continental show is comparable to the huge International Home Furnishings Market which takes place in Chicago twice annually.

#### Film Accomplishes More in Less Time

*Chemstrand* has now replaced the earlier slide presentation which ran three-quarters of an hour.

Comparing the film with the slide presentation, Mr. Shumeyko concludes: "During the 43 minutes, the slides could sketch out the barest essentials. And, let's face it, slides made for a static presentation. With the film we accomplish five times as much in half the time!"

In the motion picture medium, within one slide presentation, do an effective job of conveying a company's total image — including its far-reaching overseas operations?

The answer from Chemstrand is a resounding "Yes!"

Hendrix has just finished session with a man on set at Niles' Chicago studios.

### Visualizing a Dealer Show

FILMED SEGMENTS played key roles as the In-Sink-Erator Manufacturing Company held dealer meetings in over 50 markets in the first quarter of the year.

The two-part film, starring Wanda Hendrix, produced for the Racine, Wisconsin maker of disposal units by the Fred A. Niles Communities Centers, Inc. A first 8-minute segment introduces a new stainless steel disposer produced by the company, including production scenes. Then the projector is switched off and company personnel give a live demonstration of the product.

In the second segment, a 7-minute film, follows the company's advertising and sales program of the year. In this, editors of trade journals appear at a filmed press conference to ask questions about the program of Hendrix. Her answers were interesting to the actual ads and promotional materials being used.

The film and meeting plans were designed for handling by district and division managers. 1,032 dealers attended in January alone.

## ONE SIMPLE LITTLE FAVOR

Focus Is on Air Cargo Handling in This Pan American Motivation Film

INTERNATIONAL AIR CARGO BUSINESS is booming! Even in an era marked by spectacular advances in dozens of industries, the yearly increases chalked up by air freight have been little short of phenomenal. What was once a comparative trickle has become a river; and the river, in turn, promises to develop into a flood.

Handling that flood is one of the prime concerns of international air carriers today. For in the context of the intense competition characterizing the modern international air transportation industry, the problems of expansion have to be solved now if an airline is to develop its share of the cargo market tomorrow.

#### Individual's Role in Complex Operation

One of those problems is the training of personnel: training not only in terms of new job skills but in terms of attitude and morale as well; for a significant irony accompanying industrial expansion has been the decrease in each individual's sense of importance as the real worth of his contribution to a complex operation becomes greater.

Because he can't see the ultimate results of a job well done, or the immediate effect of a "simple" mistake, the individual employed in a complicated chain of events may well begin to lose sight of the importance of what he in particular is doing. In the business of shipping cargo around the world by air, this attitude can be most harmful to sales development.

#### Personal Awareness Is Best Insurance

As the leader in international air freight, Pan American World Airways has too much at stake to overlook the importance of any of the thousands of individuals engaged in its cargo operations. Thoughtless handling of an air waybill, an omission in the preparation of a manifest, a slight miscalculation in weight and rating of a jet freighter—apparently simple mistakes that can be costly to Pan Am and its customers; mistakes against which the best insurance is the awareness of the people involved as to the importance of their seemingly routine jobs.

Part of Pan American's effort in preparing for the flood of air cargo business, therefore, lies in a training program designed to show the consequences of each individual job in the complex operation of the company's cargo facilities. And the core of this program is a dramatic,

"Handle with care' in all kinds of weather and under all kinds of pressure... is the first commandment in Pan Am's Fleet Service work..."

semi-documentary film titled *One Simple Little Favor*.

Produced for Pan American by Henry Strauss & Co. of New York, the film focuses on the unsung heroes of air freight. Breaking down complicated procedures into small, immediately recognizable job functions, *One Simple Little Favor* presents the air cargo picture in terms that are not only realistic but—more important—meaningful to the individuals concerned.

From sales office to warehouse, from payroll control to the actual loading of the aircraft, the importance of each of the many and diverse tasks necessary to the smooth and efficient working of a complex organization is spelled out in a way that deliberately involved the student audience in assessing its particular role in the process.

#### Jobs Related in Close-Meshed Network

Isolated incidents are seen as part of a coordinated whole. What at first appears remote and detached becomes—through the picture developed in *One Simple Little Favor*—tightly tied to other jobs in an elaborate and closely meshed network. Cooperation becomes a viable idea instead of just a word.

The documentary footage for this 19-minute 16mm color film was shot at Pan Am cargo facilities around the world. It is neatly blended with dramatic sequences showing the emergency shipment of vital engine parts halfway across the globe to a tanker stranded in a foreign port. The importance of the many separate parts of air cargo is seen in their relationship to the integrated whole as men and machines pit themselves against clocks, regulations, ironic circumstances, and the inevitable human factors.

The result is excitingly satisfying and the student audience is left with a new respect for each of the men who take the trouble to do that one simple little favor.

*One Simple Little Favor* was produced for the exclusive use of Pan American Airways' Sales & Service Training Department. It is not available to the public and is shown only as an integrated part of Pan Am's official cargo training program.

At left: "Air cargo involves people in dozens of different jobs in a close-meshed network."

Below: "When the shipment arrived we still had 20 minutes to flight time. I decided to push this one through Customs myself..."

# Audiovisuals Help Train Bank Personnel

Bank Public Relations and Marketing Association Has National Membership of 3,400

FOR THE PAST 17 YEARS the 3400 member banks that belong to the Bank Public Relations and Marketing Association, an information and nerve center for the banking industry, have come to look upon the steady production and wide use of slidefilms as a "way of life." From the viewpoint of the officers and directors of the Chicago headquartered trade association, the enthusiastic acceptance of its films is a cohesive force that goes a long way in selling memberships.

Reid H. Ray Film Industries of St. Paul, Minn., producers of the widely-circulated library of 27 slidefilms and one motion picture, regards the harmonious relationship with the Bank PRMA as "an outstanding example of a repeater account."

### Program Anticipated and Met the Needs

Clyde L. Krebs, vice president of national sales for the Ray organization, attributes the heavy use of the slidefilms and the sponsor's loyalty to anticipating and meeting the client's needs from the outset.

When Krebs first called on the Bank PRMA, he tried to put himself in the shoes of a prospect unfamiliar with the use of audiovisuals and timid about spending money on films. He came up with the idea for the Banking Public Relations and Marketing Association of a "pay as you go" plan whereby production costs would be realized from an attempted sale and rental arrangement. Then, explained Krebs hopefully, if there was satisfaction with the job and enough money in the kitty, perhaps he and the Bank PRMA group could talk about additional productions.

### A Total Concept Communications Idea

In addition to selling the self-amortizing plan, Reid H. Ray offered its banking prospect what it calls a "total concept communications idea." Over and above doing the script, shooting, and editing, Krebs, on behalf of his principal, agreed to produce supplementary printed aids and art materials to help the sponsor promote the films and insure maximum impact from their viewing.

The Bank Public Relations and Marketing Association "bought" the program and were delighted to find they were riding a sure thing.

"Anatomy of An Error" takes up the causes and cure of bank errors that help to lose accounts.

"A New Look at Customers" sees them as people who face the usual web of financial problems.

It took only four months to recoup the first investment and this record has been maintained through the years.

### Two Factors Underscore Value of Films

Mr. Wilson Parfitt, secretary of the Bank group, attributes his organization's reliance on sound slidefilms, that has proceeded almost uninterrupted since 1948, on two factors: First, the smaller banks that make up the backbone of the Association lack time and experience to do a good job in training personnel, a large part of which can be done on film. Secondly, over the years banking has become a highly complex and competitive operation that lends itself to the kind of clarification and selling a good film can perform. "It is interesting to note," says Parfitt, "how the nature of our audiovisual needs has changed from an exclusively training and service-oriented emphasis to a hard-nosed selling pitch."

The Bank Public Relations and Marketing Association's slidefilm library is all color and divided into six categories with a group of related and sequential titles placed within each category to form a unit. For example, the four titles in the Sales Series include *Ask for the Business*, *Selling is an Attitude*, *Selling is Helping*, *A New Look at Customers*. Other series include Human Relations, Training, Bank Service, Motivational and Officer Call. All are "in bank," intended for showing to employees

The "Error" was compounded when Mrs. Humphrey warned friends to "stay away from bank."

and trainees within the bank itself. For the first two slidefilms in the Bank unit, *What's in a Trust* and *Money Rent*, are also intended for outside groups, and are regularly seen by service clubs, and business organizations in cities. Other films in this series are stage.

### Many Banks Are Equipped With Projectors

Parfitt points out that many banks have audiovisual projectors of some type. Films released by the Bank PRMA, are rented while the balance is sold.

Both the American Bankers Association and the National Association for Bank Control and Operation which represent a significant segment of the banking industry produce films.

These other groups orient their programs in different directions: the ABA concentrates on public image productions, and the Audit group more concerned with customer relations.

"Mr. Banker Goes Calling" shows banks how to increase business by building relationships between themselves and customers or prospects.

filmic path through the tangled state of affairs having to do with purely financial operations.

### Print Material Backs Up Each Program

The Bank PRMA is pleased with the variety of materials that precede, accompany, and follow-up the film series. Parfitt gives credit here to Clyde Krebs — who, incidentally, helped in writing some of the scripts — for their creation and development. An attractive, multicolored and illustrated, promotional folder with order blank attached goes out to the entire group membership in advance of the release of a title. "Take-home" pieces outline the main points of each film and are given to viewers after each showing. Finally, comprehensive Instructor's Guides are given to the instructors and meeting chairmen for the purpose of outlining orderly sessions and getting the full potential out of the audiovisual.

When it was apparent that the Bank PRMA was in picture making "for keeps," an audiovisual committee from among the officers and members was installed and has been working with a continuous search for new subjects.

1966 production plans call for the Bank Public Relations and Marketing Association to offer a new series of informational slidefilms on *What the Employee Can Do*, *Case of a Bank Robbery*, and *How Law Enforcement Agencies in the Identification of Hold-Up Men*.

**T**HE WORLD'S LARGEST invest-  
ment firm, Merrill Lynch,  
Pierce, Fenner & Smith, Inc., main-  
tains a broad program of educa-  
tion for potential investors in which  
the motion picture medium plays  
a key role. Last year, this com-  
pany's five sound films were  
shown to more than 100,000  
groups with a total audience in  
excess of six million viewers and  
they were shown on television over  
3,500 times.

Last month, a sixth picture  
joined this growing film library  
as *Good Old Sam* (or *How to Be  
a Successful Investor*) made its  
debut to a New York premiere  
audience. Produced in Hollywood  
by Parthenon Pictures and dis-  
tributed (as are all other MLPFS'  
films) by Sterling Movies U.S.A.,  
*Sam* continues this eminently suc-  
cessful effort to broaden the base  
of share ownership. The film is in  
Eastmancolor, uses a "photoplay"  
format and is 28½ minutes in  
length. Bing Russell and Emlen  
Davies head a cast of thorough-  
going professionals.

#### Did Sam "Retire" With Bonds?

The new film dramatically fol-  
lows the career of "Good Old  
Sam" Ward, an unassuming as-  
sistant company treasurer who  
takes early retirement, donates  
\$25,000 to his college and then  
leaves on a trip around the world.  
When a routine audit reveals that  
bearer bonds are missing, all fin-  
gers point to Sam.

Did he steal the bonds? Not  
"Good Old Sam!" But in the  
process of proving Sam innocent  
of wrongdoing, the picture does a  
dramatic and wholly believable  
job of explaining just what the  
average investor can hope to ac-  
complish through long-term ac-  
quisition of securities and how he  
should go about it.

#### Based on Study of Securities

Sam's investment experiences,  
as detailed in the film, are typical  
— wholly and completely typical  
— of the experience that the aver-  
age investor might have had over  
a 35-year period on the basis of  
comprehensive studies made by  
The Center for Research in Secur-  
ity Prices at the University of  
Chicago.

As the bonding company's audi-  
tor says at the close of the pic-  
ture, "I just can't understand it  
. . . here's this guy, could be me,  
never made any of what you'd  
call real dough and he's retiring  
when most of us have 15 years to  
go . . . and with enough money  
to do whatever he wants and no  
worries."

The dramatic moment of confrontation as "Sam" returns to face his accusers. Public education film is the sixth in the growing library of Merrill Lynch.

## The Saga of a Prudent Investor

Merrill Lynch Continues a Widely-Shown Film Program With  
the Dramatic Story of "Good Old Sam" and His Investments

— To which broker Dan Bur-  
roughs replies with a grin, "maybe  
you'd better take my card." But  
Sam missed hearing all of this,  
having unlocked his handcuffs,  
retrieved his confiscated tickets  
from the Spanish cops and left —

"Cap" Palmer, as Parthenon's ex-  
ecutive producer-writer and Don  
Livingston, as producer-director,  
Merrill Lynch vice-president Lou  
Engel, in charge of public relations,  
supervised the entire project. •

\* \* \*

#### From the Producer's Notebook

Parthenon's executive producer,  
Charles (Cap) Palmer, notes: it's  
not enough for audiences to un-  
derstand something, they must *re-*  
*alize* it, *identify* with the message  
and be swept into *acting* on it.

"To achieve real identification,  
the film-maker must go to a pho-  
toplay format—using real people  
who could be 'me', in real-life sit-  
uations."

As for content, the investment  
program itself was developed and  
checked with extraordinary care.  
First, the details of Sam's earnings  
over the 30-year period were  
scheduled, against his probable liv-  
ing expenses, to lay out the net of  
his probable savings. His "secret"  
is open to anybody: regular invest-  
ment over a period of time, with  
dividends left to re-invested and  
accumulated; staying with strong  
common stocks of blue-chip qual-  
ity, will make the sum grow "as  
the country grows."

The sponsor was represented by  
Merrill Lynch PR vice-president,  
Louis Engel. It was his exacting  
assignment to insure that every-  
thing was in accord, spirit as well  
as letter, with the stringent rules of  
the Stock Exchange. Attending the  
set every day, he contributed to  
both action and dialogue. •

Proof of Sam's innocence is found  
in carefully-kept records of his stock  
investments over the years.

with Dan's sister Florence, the girl  
who had married somebody else  
20-odd years back — to catch up  
with a slow boat to their promis-  
ing future.

#### Larger Audience Is Expected

Merrill Lynch films are made  
available without charge to clubs  
and organizations all over the  
country. With this addition to its  
library, the firm anticipates a con-  
siderably larger audience, both  
live and via television, for its films  
this year.

Credits for *Good Old Sam*  
should include that of Charles

An "in house" operation affords control of all phases.

## Don't Overlook TV Commercials

— says Bruce Jamieson, President, Jamieson Film Company

**T**AKE A GOOD HARD LOOK around your shop . . . Are you an industrial film producer married to the making of just "educational" or "sales" films?

If so, ask yourself: Why?

Is it because of your equipment, your personnel or your sales techniques?

Who says that you can't go out and compete successfully for television film commercial business? If you already have the skill needed for producing interesting, informative and soft-sell industrial films; you just might have the sophistication needed for making the same splash in the television business.

### Pack Plenty Into a Minute

Believe me, it's no cinch. From our 50 years of film making experience, we often find you have to pack more production into a good one minute spot than you would into a 10-minute industrial film. And the result might have to be even better because, for the user the stakes could be higher.

With the recent growth of the

color television market, we feel that an even greater challenge in commercial-making now exists. Tough competition for the consumer market via the television route requires maximum production value for each dollar expended. Everyone faced with the reality of TV advertising in color, is now budgeting costs that often preclude the comparative ineffectual creativeness of the studio tape camera.

### Outlet for Creative Talents

You can now compete for this business. We have for the past 15 years! Our efforts have gained a large number of regional and national filmed commercial accounts to complement our already successful industrial film business. In addition to creating profitable revenue, we figure it a factor of virtually equal importance that this field offers us, as producers, an outlet for top creative talents.

Almost without question, television commercials are among the most creative motion picture film products being made today. By placing sufficient emphasis in this field to where it accounts for one-third of our total business, we have actually been able to upgrade our organization in terms of both creative talents and production facilities.

### Agency People Want the Best

The film producer's aspirations for excellence are generally shared.

☆ ☆ ☆

At Left: Howard Fisher, Radio-TV director, Tracy-Locke agency (ctr) checks editing of a commercial on Moviola with Jamieson staffers . . .

The growing demand for top-quality filmed television commercials has real potential for experienced studios, this veteran be-

in virtually any marketing center, by top-flight, creative agency people. In an area like Dallas, for example, there are many highly-talented admen marketing consumer products. These people turn out to be as creative as you will find anywhere.

In our totally "integrated" production plant, among the strongest points in our favor is the "everything under one roof" approach.

From the "idea" stage, the agency's or ours, the total facilities at Jamieson are always available. Through coordination between Jamieson and the agency, we can actually guide his commercial through our plant with close control at every point in the production.

### We're Oriented to the Medium

If there is any secret for our success in the filmed television commercial market, it has to be this fact that we are technically and creatively oriented to the film medium from sales force to finished production. Through years of close work with agency producers from every part of the country we have developed an understanding of advertising objectives and the application of film technique to accomplish them.

Working with admen in the production of television commercials requires the producer to learn his market and clients. Even though nearly 95 per cent of the television commercials are scripted or created in rough form initially by an advertising agency, the producer must make a creative contribution in all the production stages: including art direction, casting, photography, editing, special ef-

fect execution, and other services. To do any less would be a disservice to the client and to himself.

### Future Outlook Has Broadened

For motion picture production the future looks good for all indications seem to point to an increase of filmed television commercials as well as in other film activity during the next few years. Even so, the producer must guard his business against competition internally.

Although the non-theatrical business has always carried some of the glamour of Hollywood, a commercial film producer is a member he is working in an advertising or sales medium. He must always use the same business practices in the production of filmed television commercials that he employs in the production of long industrial films.

### Maintain a Quality Standard

"Quality" is the basic element for our 50-man production staff. If our work is meeting strict quality standards we have set for ourselves, we feel that it will be more satisfactory for the client. This policy has earned us a large turn in repeat business.

The film producer enters with a big plus in the quality control. We, by standardizing all of our production on Eastman Films, have been able to concentrate all quality control efforts on human factors. The film is consistent. It will be the same quality picture even if it is used the same way.

There are also ample opportunities . . . (PLEASE TURN TO PAGE 10)

A full production crew, including sound equipment, actors and camera operators, completes a filmed television commercial on location at this service.

## Records the Xerox Annual Meeting

pay for Lunch" a Penetrating Look Into Corporate Life

XEROX CORPORATION has always been known for its bold use of motion picture film programming in its television sponsorship. Last year, Xerox made news in corporate communications with its annual meeting, in pictures and in film, at all of the events at the company's annual meeting held in New York City.

It was brought together in a 26-minute motion picture titled *Company for Lunch*, the Xerox film of an actual corporate meeting. It was released in mid-April for distribution via Sterling Movies U.S.A. Xerox believes in motion pictures in all U. S. companies, as well as those owning

President Joseph C. Wilson (on podium) answers shareholder's query.

The meeting drew an attendance of 4,400 in New York City. Last year, the meeting returned to Webster; in 1966 it will be held in Chicago's McCormick Place convention hall.

"Even with this shifting of annual meeting locations, we will never reach more than a fraction of our stockholders. That's one reason we made this film," a company spokesman said. It's a good bit of advice for some of America's other widely-held companies.

*Company for Lunch* was produced by Magnum Films' Philip Gittleman, a former CBS News producer - writer - director. Prints are now available from libraries of Sterling Movies U.S.A. for free-loan requests by groups. •

\* \* \*

### Engine and Boat Manufacturers Sponsor Film on Modern Marinas

A new motion picture, titled *Marina*, surveys various facets of recreational boat basins. It has been added to the *Water World Series* of boating films sponsored by the National Association of Engine and Boat Manufacturers.

The film shows the value and significance of the role played by marinas in the United States, and encourages the development and improvement of modern boat basins. The 40-minute color film was produced by Victor Kayfetz Productions, Inc., New York.

Distribution of the film is being made to yacht club, civic groups, and other interested organizations at a handling charge of \$10, although it will be made available free for public service use to television stations. NAEFBM headquarters are at 420 Lexington Ave., New York 10017. •

## COPPER'S ROLE IN A MODERN WORLD

Imaginative New Kennecott Color Picture of an Ancient Metal

THE MULTITUDE OF USES FOR COPPER are revealed in Kennecott Copper Corporation's new color motion picture, *Copper!* Although copper is the most ancient of metals, the film inquires into its uses in the modern world, and finds it — everywhere.

The camera glances up, to find copper in the weathered green rooftops of New York skyscrapers. Aimed down, the lens penetrates the depths below the city's streets — where copper wire and cable carry the ideas and power for our civilization.

Between these heights and depths, *Copper!* shows us a world of uses that is hidden from us only because it is too familiar to be noticed.

Producer-director-writer and cinematographer Lloyd Ritter of MPO Productions took his film crews to ten states and 19 cities to show copper resources and uses: to the giant Kennecott mine at Bingham, Utah; a hydroelectric plant in South Dakota; the bronze-clad Seagram Building in New York; and to a water desalination plant in Texas.

Photographed in Technicolor, the 37-minute film captures the full range of copper colors — the red hue of pure copper, the yellows of the brasses, the golds and browns of bronze, the silvery shades of cupronickel, and the blue greens of oxide coatings.

Six months of writing and preparation preceded the photography of *Copper!* New lighting techniques were developed for the color photography of the film. A lighting kit of over 2000 pounds, especially designed for this project, was transported by air to each location. The result of this and other special techniques used is a delicacy of shading and richness of color that could not have been achieved with standard methods.

While the film briefly explores the mining, smelting and refining of the basic natural resource, it focusses primarily on use: in the house, on the street, in space, in industry. We see copper through the eyes of a child recovering a glistening copper penny from beneath a sidewalk grating. We see it in the copper heat exchangers deep within a diesel locomotive. And we see it in many other places, familiar and unfamiliar, expected and unexpected.

From the opening scenes of children playing in the streets, kids play a delightful and frequently amusing role in the film. They start up a hydroelectric generator, drive freight trains, launch a ship, explain desalination (at least one of them seems to understand it), help build a skyscraper, ride a camel across the desert, pilot a space capsule, and in the end lend significance as emissaries from the future who will see "the world which is yet to be."

Burgess Meredith is the narrator of *Copper!* Robert Abramson composed and conducted the original score. The picture is available for free distribution to schools and adult groups through the film libraries of Association Films, Inc. •

Young eyes capture glimpse of "the world which is yet to be" in this scene from new Kennecott Copper Co. color film, produced by MPO Productions.

# MEN WHO DIRECT YOUR EMPLOYEES NEED THIS

People in supervisory jobs do their work more effectively when they are brought to realize the vital nature of their role in the organization. The Supervisor's responsibilities — in the interpretation and application of Company policies—are clearly defined in

## "The Supervisor's Job"

This sound filmstrip places emphasis on careful induction of new people, precise delineation of job requirements, and clear job instruction. It results in better work, reduced employee turnover, closer cooperation.

One of a series of filmstrips showing the various facets of the Supervisor's responsible service:

## General Telephone Employees Get Look at Handling of Customers

A training sound slidefilm that handles the delicate task of helping employees "see themselves as others see them" has been released by General Telephone & Electronics Corporation, for use by 30 of its operating companies providing telephone service in as many states.

The 100-frame, 15-minute film, in color, was executed under the supervision of Robert Toney of GT&E and produced by Admaster Prints, Inc., New York.

The filmstrip is primarily for business office representatives of operating telephone companies. These employees, usually young women, hold positions sensitive from a public relations viewpoint, and have considerable latitude in their individual handling of service and credit problems. As the film points out, each of them may be the only contact a subscriber has with the company.

Using a fantasy theme, *Through the Looking Glass*, that borrows the classic Alice in Wonderland approach, the film takes the representative in imagination through

"Alice" learns how better customer service helps everybody to save . . .

the telephone and out on the user's side, where she meets a variety of customers, now Wonderland characters. How her actions and attitudes affect them, as well as other employees and the company's overall image, is shown dramatically.

"We believe this production marks a creative advance in our training aids," Mr. Toney says. "It shows how an imaginative and tactful approach can prove more effective than trying to go at the problems head-on." First response from training directors appears highly favorable. GT&E expects *Through the Looking Glass* to be the first of a series of similar training aids to be created to assist the programs of operating companies.

## FILMSTRIPS IN TODAY'S BUSINESS

### Woodard "Vista-Sells" Its Furniture Line

**THE PROBLEM:** How do you confront the retail customer at the point of sale with a potent presentation that tells a complete story, with or without the aid of a floor salesman?

**THE SOLUTION:** Use an "action catalogue" — a continuous flow film viewer that automatically tells the story via a four-minute presentation of a 48-picture filmstrip.

This is the approach that Lee L. Woodard Sons, Inc., Owosso, Mich., manufacturer of wrought iron furniture, is now making available to its retail dealers, according to David Vaughn, national sales director.

Qualified dealers are being offered the projector, measuring 15 x 13 x 13 inches, complete with film strip in position and ready to run. All the dealer has to do is plug in the unit and adjust the focus. The unit can be left to run continuously.

The continuous filmstrip itself alternates full-color photos of Woodard Furniture with printed copy covering the major features and benefits of the product.

"This 'action catalogue' presentation does a number of important things to help the dealer sell more Woodard furniture," Vaughn explained.

First, its motion and color catches the eye of the customer as she moves through the store, thus creating and directing traffic to the wrought iron sales area.

Second, it answers questions customers always have on their minds by comparing wrought iron furniture point by point.

"In this manner, the presentation," says David Vaughn, Woodard's National Sales Director, "explains workings of company's 'action catalog' on the Vista-Sell unit to Howard Kosier, New York director of marketing for the furniture company."

tion also trains the floor salesman and helps him remember the points when discussing Woodard Vaughn said.

Third, it overcomes the "culties posed by prospects who are 'just looking' and don't want to be assisted by a floor salesman. The presentation also tells the complete story to prospects who get impatient listening to a sales man.

Fourth, the "action catalogue" helps sell by including copy that appeals to action, encouraging the customer to become involved in the selling interview with floor salesman.

"For example, the presentation contains action statements such as 'Tell the salesman what you have in mind,'" Vaughn said.

Fifth, continuous presentation keeps the customer engaged and entertained, an important consideration in building the customer's interest in quality wrought iron furniture.

The Vista-Sell Continuous Film Unit used by Woodard was made by the DuKane Company. The film was prepared by Lee L. Woodard and Cheadle, Detroit. Woodard plans to change the film periodically to keep the presentation and up to date.

### "Toddler's Hours" a New Safety Film on the Very Young

A new motion picture tells how a family's daily home life can explode into danger for preschool children has been released by Actna Life & Casualty.

Titled *The Toddler's Hazard*, the color film explains the causes of home accidents that kill 6,000 youngsters annually and injure a million more.

Produced in cooperation with the Children's Hospital Medical Center, Boston, it describes an accident-charged "late toddler syndrome," from four to five years of age. The film pinpoints eight dangerous situations that arise on a hectic day of one typical child and tells how to overcome them.

*Toddler's Hours* is available to all organizations interested in home safety and for television public service programming. It can be obtained on a free-lending basis by writing to the Information Education Department, Actna Life & Casualty, Hartford, Conn.

## "Cineposium" on Film Values

A final highlight of the conclud-  
ing program on Saturday will be  
a "Cineposium" as that popular  
panel show is telecast in Los  
Angeles by Channel 28 (as well  
as other educational TV stations  
throughout the country). During  
this show, several distinguished  
guests discuss the merits of a film.  
The Cineposium at the Miramar  
will be conducted by its producer,  
Laurence Schwab.

The ladies aren't being forgot-  
ten during these eventful days!  
Elaine Dolnick has arranged a  
special program of women's events  
for wives who accompany their  
husbands to Santa Monica. These  
special events include a tour of  
the MGM Studio (and luncheon),  
a tour of Hollywood and Beverly  
Hills (and homes of the stars) as  
well as an advance fashion show,  
a theater party and some "sur-  
prises" Elaine has in store for her  
guests.

## Some of Our New Exhibitors

Among the new exhibitors to  
display their wares at the National  
Conference this year are the Pail-  
lard Corporation (Bolex); Pro-  
ducers Equipment Company (with  
their extensive line of equipment);  
Plastic Reel Corporation (showing  
their exciting new plastic products  
for producers and distributors);  
and Beckman & Whitley, who will  
exhibit and demonstrate their new  
ultra-compact CM 16 sound cam-  
era (see the spread in other pages  
of this issue).

## San Francisco Chapter Guests of Calif. Dept. of Water Resources

☆ The California Department of  
Water Resources' building at Sacra-  
mento was the setting for the  
February meeting of the San Fran-  
cisco Chapter as members and  
guests viewed that agency's new  
film, *Frozen Reservoirs*. They also  
saw the new Aerojet-General pic-  
ture, *The Sacramento Story*.

Featured speaker of the evening  
session was Bill Stutz, Amega Cor-  
poration, who discussed sound re-  
cording equipment for in-plant  
film makers. The chapter's past-  
chairman, Ira Thatcher of United  
Air Lines, is currently serving as  
chairman of Western regional

(CONTINUED ON NEXT PAGE 48)

## Present a Report on Soviet Film Industry

Herb Farmer, Sid Solow Tell Chapter Impressions of Visit

HIGHLY INFORMATIVE and en-  
tertaining were the words and  
pictures which brought members  
of the Los Angeles Chapter into  
the Soviet Union's film industry  
of today as recent SMPTE visi-  
tors, Herbert Farmer and Sidney  
Solow presented them at a recent  
meeting. Herb Farmer is director  
of Audiovisual Services at the Uni-  
versity of Southern California; Sid  
is well-known to all of us as the  
president of Consolidated Film In-  
dustries.

Together with Saul Jeffee, presi-  
dent of Movielab, New York City  
and Konstantin Pestracov, physi-  
cist of the IBM Corporation and  
their interpreter, this official party  
toured Russian motion picture fa-  
cilities under the sponsorship of  
the Society of Motion Picture &  
Television Engineers as part of the  
Cultural and Scientific Exchange  
agreement between the U.S. and  
the USSR. Some 300 slides  
brought vivid impressions of So-  
viet film operations to their  
viewers.

### Soviets Turn to 70mm Image

Two facts were memorable: the  
large number of women employed  
in the Soviet film industry and the  
gearing of their film-making to  
larger size film than is generally  
used in this country. The Soviet  
tendency toward 70mm production  
sometimes seemed to be one way  
to overcome poor processing pro-  
cedures, rather than for better pic-  
ture quality.

Sid Solow noted: "Soviet equip-  
ment is generally excellent, but as  
for lab film cleaning equipment —  
what there is of it — is composed  
of rudimentary methods and the  
results on the screen is often utter-  
ly filthy and would not be saleable  
commercially in this country."

### Few Men in Soviet Labs

Throughout their tour of 15  
studio facilities in five Russian  
cities, the U.S. delegation was im-  
pressed by the absence of male  
workers. They noted that they  
didn't see a single male film editor  
during the trip, that lab personnel  
was almost entirely female and,  
generally speaking, the only men

seen were in supervisory or man-  
agement positions.

Studio visits began at Mosfilm  
Studios in Moscow and Farmer  
remarked that Russian theatrical  
films are "being geared to 70mm.  
In the special effects department,  
I was quite surprised to find that  
in Mosfilm Studios, papier mache  
and plaster has given way to  
formed plastics — just as is being  
done more and more in this coun-  
try."

### Note Extensive Film Training

The extensive Russian govern-  
ment program for training people  
in various phases of motion pic-  
ture and television work made a  
deep impression on the delega-  
tion.

"In Leningrad, we visited the  
Institute for Cinema Engineers,"  
Farmer recalled. "This is another  
training and research facility for  
technicians and engineers. Here,  
the laboratory and sound techni-  
cians and other crafts receive their  
training. It was estimated that  
about 700 students attend this In-  
stitute every year and another 1-  
100 take correspondence courses.  
It is an important center for re-  
search."

Among the new pieces of film  
equipment which caught the at-  
tention of the U.S. group was a  
hand-held reflex cine camera  
which has a flexible reflex viewer  
composed of a long cable of opti-  
cal fibers. If a fiber broke while

**Soviet Film Progress:**

(CONT'D FROM PREVIOUS PAGE)  
one looked through the viewer, a black spot appeared on the viewer image.

An unusual film printer (for 16mm) was shown and explained by Sid Solow. He described it as "a very fine printer which turns out two 16mm images from a double 16mm negative — that is, two side-by-side 16mm images going in the same direction on 32mm base and it prints in step form, an intermittent printer.

"It's their own design and a very good piece of equipment which would be a big seller if it were on sale in this country because it is unique in that it is a

Farmer and Solow report on USSR. step-printer, which is always ideal for good definition. It goes at a speed of 200 feet a minute and they get, they say, 400 prints from a negative. I have reason to believe that and I would say that if I'm to believe all they said about it (and I have no reason to doubt them) that this is the best 16mm contact printer anywhere in the world," Solow concluded.

Kodak Instamatic cameras carried by all four members of the U.S. delegation intrigued Russians everywhere they travelled — and so did the present and future development in the U.S. of Super-8 film and equipment which the Soviets have dubbed "Format S." The program was held in February at Hal Scheib's Cinema Research Corp.

**Gordon Enterprises Hosts 20th Birthday Luncheon at Fox Studio**

☆ Many IFPA members were guests at that champagne luncheon where they helped celebrate the 20th anniversary of Gordon Enterprises with its president, Alan Gordon, a long-time staunch friend of this organization. The gala was held on the sound stage of 20th Century Fox where the current Jerry Lewis production, *Way . . . Way Out*, was being lensed.

Mr. Lewis received the first "Golden Light" award — presented to him by Alan Gordon — for his "contributions to the advancement of motion picture technique" through the use of closed-circuit television in conjunction with studio film cameras to provide, in effect, "instant dailies." Mingling with the stars at the Gordon anniversary party were IFPA past-presidents Bob Gunther and Gene Burson; Jim Swift, Los Angeles Chapter chairman; our Conference exhibit chairman Bob Dickenson; Gene Huggins; and editorial vice-president Roy Deets.

Thanks, Alan Gordon, for your kind invitation to share your 20th anniversary event! This gentleman will always be remembered within IFPA as the annual donor of the Jay Gordon Memorial Award, presented each year to the outstanding contributor to the advancement of the film medium.

## You can have automatic synchronization of your stereo tape recorder and a **KODAK CAROUSEL Slide Projector** for less than **\$30.00**

The new KODAK CAROUSEL Sound Synchronizer cues the projector with an inaudible signal when you want to change slides. The change is automatic. For use with stereo tape recorders and several models of the KODAK CAROUSEL Projector.

And this unit is easy to connect, easy to use. Just plug it in. When you want to record the *change* signal, just push a button. From there on, it's automatic. Voice and other sounds are recorded as usual on one track, the cues on the other.

### Part of a growing system

The new Sound Synchronizer is one

more component of a complete slide presentation system that includes a jamproof KODAK CAROUSEL Projector, smooth dissolves, and a capability to use slides of any standard thickness in the same tray.

For more information on the complete KODAK CAROUSEL Projector System, see your Kodak AV Dealer. We would also like to send you a copy of "Audiovisuals in Business and Industry," an interesting presentation of what you need to know to make profitable use of this exciting way to communicate more vividly.

## Portrait of a Communications Specialist

FAMILIAR TO ALL READERS of these JOURNAL pages is that personable and very active past-president of IFPA: Robert S. Scott. Always a popular figure in and about Southern California film studios, Bob Scott has accumulated some 25 years of professional experience in both the entertainment and audiovisual communications fields.

His career in the service was notable: entering the Army as a private in 1942, he was graduated from the Signal Corps' OCS as a second lieutenant and was trained as a Field Radio Officer until he transferred to the Corps of Engineers. Bob served in the European Theater of Operations as a Communications Officer, Combat Engineer Company Commander and Group Intelligence Officer.

### Lt. Colonel When He Retired

After V-J day, he joined US-FET Headquarters as Chief of Entertainment, ETO and by this time had attained the rank of Major. He remained active in the Army Reserve Corps, again in the Signal Corps and recently retired as a Lt. Colonel.

Since World War II, he has specialized in developing the many applications of film — both motion picture and still — into a most effective medium for government, military and defense industry management use. Bob spent four years (rewarding ones, he notes) as a writer-director-producer for the Air Force Lookout Mountain film production group.

### Headed Film Support System

In 1955 he was called upon to organize the vast film services' support system for the Air Force Ballistic Missile System and continued to supervise this organiza-

IFPA past-president Bob Scott

tion until 1958. For the next three years, he worked on the industry side of the team with the Douglas Aircraft Company's staff, as Administrator of Film Services and as Manager of Corporate Film Communication.

Late in 1960, Scott returned to a staff position in support of the Air Force Ballistic Missile and Space Systems programs as Assistant Director for Audio-Visual Requirements for the newly-formed Aerospace Corporation. His primary responsibility is again in the field of audiovisual communications as the corporate staff specialist and consultant to Headquarters, Air Force Systems Command and its Space Systems Division.

### New A-V Tools for Aerospace

He has the responsibility of defining requirements, both policy and production, with special attention to new management communication techniques such as closed-circuit television. Bob's variety of experience with many types of communications media has convinced him of the immense (and largely unrealized) value of the many audiovisual media and techniques which have been developed — especially when these tools are effectively employed and properly directed as instruments of management communication.

This fourth past-president of IFPA has also been an active member of the Society of Photographic Instrumentation Engineers for the past several years.

\* \*

### Chapter Views "Arriflex Story" and "EF" Ektachrome Test Films

☆ Austin and Rose Green were hosts again as the Los Angeles Chapter met in their new Cine-sound Studios during March. A showing of *The Arriflex Story* was presented by Mike Zois of the Arriflex Corp. of America. The new Arri BL camera was also demonstrated.

Scott Robertson of Eastman Kodak then presented a demonstration film comparing the new "EF" 16mm Ektachrome with the past "ER" type and Scott also gave members some brief views at samples made by Bill Gibson of Douglas Aircraft and other cameramen, all shot under available light conditions. It was an impressive demonstration of this versatile new color stock.

Monitors in working areas enable employees to view closed-circuit television.

## Closed-Circuit Television's Role in Industry

### CCTV's Useful Role in Employee Motivation and Training

IT SHOULD BE NOTED at the beginning that television in itself cannot solve any problem, motivational or training. It is basically a means of conveying information from one source to another — and the major problem which faces any motivational or training program is that of communications. The effectiveness of the solution of any program is wholly dependent upon the effectivity of the communications media selected and the material presented.

Experience at Autonetics and in the Space and Information Systems Divisions of North American Aviation over the past seven years with motivational and training programs for manufacturing and other plant personnel indicates the use of television as a communications medium has a number of advantages over the other media:

1. It has an almost immediate reaction time to a requirement.
2. There is no lost time for personnel when the television monitors are automated and placed within the work areas and, of course, this results in a considerable cost effectiveness.
3. The unique, dramatic values of television afford extra urgency and emphasis to the message.

### TV Monitors Carry Messages

Today, hundreds of television monitors are either permanently positioned or are on permanent stands that can be rolled into any location and immediately plugged into a coaxial outlet to bring a TV message to the employees of the Autonetics and Space and Information Systems Divisions of North American Aviation.

On some occasions, more than 18,000 employees have viewed a single, special television program during a one-day showing.

And, although these employees

☆ (The following article taken from a speech presented by Richard Turner of the Autonetics Division of North American Aviation and one of the founding members of the Institute of Film Producers Association at the recent Ohio State University Radio and Television Conference in Columbus)

now view closed-circuit television productions on a regular basis, objectives have not changed. The objectives are, and have been, in number: (1) to motivate employees to take pride in their work and to accept perfection as a rule rather than the exception and (2) to improve work habits by emphasizing areas where concentrated effort is necessary to meet reliability requirements.

### Missile Repair and Overhaul

In the summer of 1962, Navigation Systems Logistics Department of Autonetics directed CCTV to assist in a training program. Over a period of one year, 300 government employees had to be trained in the overhaul and repair of the precision guidance system of the Air Force's "Altair" missile. The problem was such a training program was enormous.

First of all, the urgent need for skilled individuals required that all courses be accelerated. Large classes were necessary to meet the schedule. Mock-up cut-away models were used. Most parts of inertial instruments — such as gyros, accelerometers and velocity meters — are small and would be difficult to see. Students would have to observe procedures in actual manufacturing

(CONTINUED ON NEXT PAGE)

Just a few  
minutes from now  
you can tell your story  
with slides.

That's Polaroid Land transparency film. Load the film into a Polaroid Land camera. Start clicking. And in a few minutes you can have 8 slides ready for immediate projection.

There are two kinds of Polaroid Land transparency film for making two kinds of slides. One is for line copy work. In 10 seconds it gives you a sharp, high-contrast transparency of anything set in type or drawn in ink. The other is for making transparencies of continuous tone material (people, objects, pictures, etc.), and its development time is 2 minutes. It produces slides un-

surpassed in sharpness, brilliance, and range of tones.

Both films are easy to use, so anyone can make slides with them. You just snap the shutter. Pull the tab. Wait for your finished picture. Dip it in a quick-drying hardening solution. Then slip it into a snap-together plastic frame and it's ready for the slide projector and your audience.

And what does this literally up-to-the-minute slide presentation cost? About  $\frac{1}{3}$  what you've been paying for the conventional kind. Here's the way to get your points across. Agree? Polaroid Corp., Cambridge, Mass.

## Closed-Circuit Video:

(CONTINUED FROM PAGE 50)

partments. Since these areas are all dust controlled, the presence of large groups would tend to increase the dust count, with the possibility of impairing the reliability of the missile's guidance system.

Once the problems were identified, the closed-circuit television unit went to work. Television outlets were installed in every classroom and monitors, mounted on mobile carts, were designated for training use.

### Multiplies All Training Aids

The television camera became an extension of each instructor's capability. Each mockup, or any part of a training aid could be multiplied many times on the monitor system. With proper utilization of two cameras, closeups of individual parts could be shown without loss of orientation.

Closed-circuit television also reduced the necessity of students entering the manufacturing dust-controlled area. The television cameras went instead.

A complete critical assembly and testing procedure for the hardware was recorded on video tape and transferred to film. These films were then used to train other students.

To overcome the problem of communication between the instructor and the student, each of the mobile monitor stands was equipped with a two-way communications system to provide an adequate question-and-answer rapport. Students could ask questions during a television presentation

just as they did in the classroom. Instructors, although not able to see their students, could ask questions and receive answers.

### Results Attained With CCTV

The result of the television program?

The schedule was met and 300 students returned to their depot well-trained in the intricacies of the overhaul and repair of the Minuteman missile guidance system.

North American Aviation and the Department of Defense believe that closed circuit television is succeeding in helping to meet the reliability demands of today's missile age by allowing quick communications through all levels of industry personnel. Management has determined that well-trained workers can and will achieve better performance if they are made aware of the importance of their contributions and of the standard of excellence they must attain.

### Two Principal Formats in Use

Over the years, experience has shown that, basically, the CCTV motivational program can be divided into two main formats — the "rifle-shot" and the "shot-gun" approach. The regularly scheduled, and most common, daily presentations fall into the "rifle-shot" category.

These programs are aimed at specific problem-solving areas, and are shown only to those personnel who are actually involved. The nature of these programs often requires that they be prepared overnight to give workers a quick look at situations as they arise. Success is clearly apparent in this type of television presentation because the

CCTV control room as the directors monitor a broadcast on safety in the use of high-pressure gas bottles.

small groups can be easily measured for reliability, yield, and discrepancy rate.

### Increase Circuit-Board Output

As an example, a particular case at Autonetics involved a department engaged in manufacturing a particularly complex circuit board. A series of twice-weekly explanatory programs was beamed to the concerned department for a period of six weeks.

As the series began, output of boards began to increase. Six weeks later, the number of acceptable circuit boards had increased by 350 percent, coupled with a significant decrease in the scrap rate.

The "shot-gun" approach is quite different than the "rifle-shot." First of all, programs are not presented on a regular schedule. They are usually produced on a tri-annual basis, or as the need arises, and are aimed at general motivation by informing the employee of the importance of his job to the success of our defense or space program.

### Newscasts Motivate Employees

The presentation of noteworthy persons and events is used, when required, to emphasize the employee's importance to the project. Unlike the "rifle-shot" approach, these programs are not beamed to problem areas alone, but are intended for viewing by as many employees as possible. Kinescope recordings of these programs are distributed to those personnel whose work stations do not fall within the boundaries of the television network.

Unlike the "rifle-shot" programs, the "shot-gun" approach is much more difficult to measure. However, it is an accepted academic and industrial fact that a well-motivated employee is more capable of performing his job successfully.

During the past seven years, closed-circuit television at North

American Aviation has drawn from the experimental stage to become an accepted communications instrument in the areas of mass motivation, orientation, training, and indoctrination. Its use of use are constantly being explored, and new methods of presentations are being developed. Closed-circuit television is being used daily that a scientist designed, continuing audio-visual communications system is the industry's most effective and dynamic tools.

### Acme Expands Videotape Facility With Two More Ampex VR-2000's

Two additional Ampex VR-2000 videotape recorders representing a capital investment of \$250,000, have been ordered by Acme Film and Videotape Laboratories, Hollywood. According to Acme general manager M. S. Johnson, the new VTR's will help the company meet growing demand on the West Coast for postproduction work on videotape programs and commercials. The new equipment will give Acme's plant a total of 12 VTR's, including four "high-band" VR-2000's.

The new equipment will enable Acme to offer "spliceless" production mixing and editing, "high band" color and B/W, the largest videotape service facility west of New York. The company specializes in large film transfers, tape-to-tape editing and 16mm color and developing and printing.

Scene in new "Drownproofing" film.

### Water Safety Programs to Show "Techniques for Drownproofing"

☆ An important new technique for survival in deep water, even for those unskilled in swimming, is the subject of a new color motion picture produced by Water Safety Programs, Inc., 200 West 57th Street, New York City.

The new film, tentatively titled *Basic Techniques for Drownproofing*, was lensed in the Caribbean, off the Virgin Islands. Much of the photography was done beneath the ocean's surface so that viewers are able to see precisely how the new technique works.

Carl V. Ragsdale, of Sun Dial Films, producer of the film for Water Safety Programs, notes that "while it would have been far easier to make the film in a swimming pool or tank, the Caribbean was selected to prove that the method is just as effective in the turbulence found in large bodies of water where survival may depend on staying afloat for long periods of time."

*Basic Techniques for Drownproofing* will be ready for release during the month of June. Write Water Safety Programs (address above) for details on print prices and terms of availability. •

### Philadelphia Buys a Picture to Promote the 1976 BiCentennial

☆ The City of Philadelphia is sponsoring the production of a 1976 BiCentennial motion picture to be used in an effort to obtain the national BiCentennial observance in that metropolis. The film will later be used for promotion of Philadelphia tourism.

John B. Kelly, Jr., chairman of the city's Steering Committee for the 1976 BiCentennial effort, announced the selection of John M. Price Audio-Visual Presentations, of Philadelphia, as the producer of the \$45,000 film. It will be produced in a wide-screen format. •

## what's new in pictures

### The Role of Research in a Hungry World

**M**AN'S DESPERATE RACE with hunger and famine and his chances of losing against today's mounting odds are documented in a new motion picture, *Life in the Balance*, sponsored by the Standard Oil Company (New Jersey).

Color photography from seven countries on three continents and on islands of the Far East draw the battle lines for an historic fight against hunger. The narration by film star Orson Welles dramatizes successes and failures in the age old contest now in a critical stage.

In sharply drawn contrast be-

tween bountiful and blighted lands, the film shows that nature and man himself have brought on the food crisis. Man's initiative and genius are portrayed as the hopes for solutions that can avert disaster.

Soil, sun and rain — the essentials of agriculture — have helped and hindered in the struggle for food ever since crops became its major source. Too much or too little in unbalanced ratios have literally put life in the balance for whole continents.

Hunger, malnutrition and disease are now grim realities for almost half the human race. Threats

of famine are brought despa- close by population grows almost every country. The three billion mouths to feed day will be six billion in next generation, the film warns.

*Life in the Balance* shows nature's imbalance in its

Botanist at the International Institute in the Philippines selects seed strains for field cultivation. Her work is part of a hybrid development project aimed at increasing yield and nutrition.

growing elements deserves part of the blame. Pests are equally guilty.

Over the centuries, man's management of the land has produced vast deserts where once thrived. His harvest teetering on shifting sand which is now nonproductive but a constant threat of burial for adjacent lands.

### Primitive Methods Limit

Where sands are no primer primitive farming methods depleted soils frequently limit yields and enslave farmers to and disappointments that have been their lot for thousands of years. "Millions of the world's farmers still work in ways familiar to Neolithic man," the film serves.

Insects and blights, growing more resistant to sprays, exact a toll which hungry people can no longer afford. Together they devour or spoil almost one-third of the crops man cultivates.

No simple solutions seem possible, but *Life in the Balance* documents the science and skills the Standard applies to agriculture's dismal dilemma. Oil is the weapon and the battlegrounds range from research laboratories in Lederle, N.J. to tropical rice fields in the Far East.

Will Be Distributed by Modern

*Life in the Balance* was produced by Equinox Films, Inc. with Gene Searchinger serving as producer-director, and Jeri Spang as photographer. Distribution will be through Modern Times Picture Service libraries.

## Dear HFE:

You say you're proud of your color quality . . .

What makes it so good?

## Dear Lab Customer:

Carefully controlled processing is an important "secret" in guaranteeing *HFE* Color Quality.

At *HFE*, each type of film is developed according to its own individual requirements. Developing solutions for the complex processing of color film are regulated as to temperature and flow, every step of the way. Temperatures of the solutions are maintained by the finest thermal regulators to within one-tenth of a degree.

Finally, in a separate room equipped with the most modern instruments, the solutions are checked continuously throughout the day by experts in chemical analysis.

It's the little extra care which produces dependably-uniform color prints of *HFE* Quality — the little extra *personal* care given to each customer's order.

If you'll visit us, we'll be happy to show you how we satisfy and please so many critical print-buyers. A trial order also will prove the point. May we see or hear from you soon?

## The completely new 16mm Sound Projector

Until yesterday, you had to settle for good 16mm sound projectors. Now there's a great one—the RCA 1600. Before you settle for any projector, ask your Audio-Visual Distributor to demonstrate the 1600. See these new features in action:

**Extra brightness makes it ideal for auditorium as well as classroom use.** New optical design makes the RCA 1600 screen picture the most brilliant ever.

**Full-time fidelity.** All-transistor 12-watt amplifier and new super-sensitive speaker, built right into the projector case, reproduce the finest sound in 16mm.

**Improved operating convenience.** Reel arms you can position with one hand, instant sound, fast focus, reverse with automatic sound cut-off, 1200-foot take-up reel stored in case, and stop-on-frame option, make the 1600 the most convenient-to-use projector ever.

**Self-threading that's carefree for you and safe for films.** Optional RCA "Safe-Threader" whisks the film leader through automatically and then is disengaged so that it never touches the film.

The Most Trusted Name in Electronics

## Vidicam Helps Lockheed Show 'Rigid Rotor'

System Combines Live TV Techniques With Film Advantages

THE LOCKHEED-CALIFORNIA Company's newest helicopter, called the "Rigid Rotor," is reportedly easier to fly, more responsive to its controls, has exceptional high-speed performance and is built around a new principle of rotorcraft engineering, long desired and long in coming.

How would the company bring all these advantages to potential users of this aircraft? Several months ago, Betty Jane Williams, experienced head of film activities for Lockheed-California, put the question to Vidifilm, Inc., whose approach to communication involves a system combining live television techniques with film production. Could they efficiently and economically create a film with the same simplicity that is evident in the operation of the new Rigid Rotor?

### These Were Picture's Goals

Betty's plan was to "eavesdrop" on a pilot getting checked out for the first time on the craft; to record on film the relatively uncomplicated checkout procedure; then to demonstrate the ultra-responsiveness of the bird while in flight.

It was her thought to capture these events as they happened, preserving all the spontaneity possible in demonstrating a true picture of the sequences. The Vidifilm system looked like a good bet.

With this approach, as with live or videotaped television, the director sees every shot in rehearsal and every image photographed during filming . . . exactly as it is shot, at the time it is made. The end product is film — in color or monochrome. Heart of the Vidifilm system is the combination film and TV camera which sends precise images to its TV monitoring system as they are exposed on either color or black and white film. The monitor console and switcher control center are highly portable units.

### TV Control Room in Hangar

An airplane hanger was the setting for this miniaturized TV station control room. At Lockheed, the director was in constant communication with cameramen via a headset two-way intercom system. His switcher panel provided the director with start-stop control and sync control for each camera.

These switches allowed the di-

rector to roll film on any or all of the Vidifilm cameras at will. After starting the film on any camera, Vidisync controls automatically synchronize the film with a conventional 16mm magnetic or 1/4-inch recorder used with the system.

### "Kine" Serves as Workprint

Another feature of the system is the ultra-portable kinescope unit which films the master "on-air" monitor during the shooting. The "kine" is a sound-on-film reversal print which becomes the edited workprint. It supplies what would ordinarily be the editor's final cut for it is a record of the shots which the director has selected throughout production. He has, in effect, edited the film himself by intercutting the three Vidifilm cameras throughout shooting, precisely as would the director of a live or videotaped TV program.

Rehearsal for the Lockheed picture was just a simple "talk-through" with Betty and Lockheed pilot Chuck Tucker. It was decided to begin the film midway through the exterior checkout of the Rigid Rotor. Then, the action followed Chuck and his student pilot to the cockpit where simplified pre-flight instrument checkout took place. After the preflight, the two pilots reviewed starting procedure for the turbine-powered bird, started the engine, took off and demonstrated for the camera, the helicopter's responsiveness and high-performance characteristics.

The action was covered (for the most part) with two Vidifilm

Lockheed's Betty Jane Williams (right) supervises filming of "Rigid Rotor" picture as Alan Levi, president of Vidifilm, Inc. (ctr), checks the camera.

cameras; the third unit was handheld inside the cockpit after the main shooting had been completed, recording inserts of the various gauges and switches referred to during the pre-flight checkout.

### Problem of Wide-Band Mikes

One problem encountered in operating close to the airport control tower with its many radio transmitting frequencies was radio interference with wide-band wireless microphones. Two "Com-Rex" narrow-band crystal-controlled FM wireless mikes were found to be interference-free and high in voice transmission quality.

Lockheed film action follows pilot to helicopter cockpit where simplified pre-flight checkout was shown.

These cigarette pack-size wireless mikes were easily hidden inside the flight suits and permitted continuous filming during checkout and flight.

Setup time on a taxiway at the Lockheed-Burbank airport consumed a little over two hours. The 11-minute ultimate film (including the inserts) was shot within a total of two and one-half hours of rehearsal and filming time. The technique made only a single retake necessary during the entire

Loading up the Vidifilm camera

shooting. And, most important, reasons for that retake were avoided during filming. With the Vidifilm approach, it would have been noted until a film had been processed and required a return trip for the editor.

After processing the sound film reversal kine, the three reels of the film were pieced together and the edited workprint was available for immediate projection. 95% of the shots were unnecessary to cut from one reel to the other, the scene was right on the button. And, on the other 5%, a fraction earlier in switching made the difference. But with motion picture filming continuously, editing was simple.

Two screenings were necessary to get a satisfactory workprint taking a total of one hour. We make the corrections and are done. With super-titles picked up by the insert camera, A & B editing took two and a half hours. A total of three and one-half hours of editing time completed the 11-minute show from shooting to color work print.

### Second Use of Vidifilm System

This is the second time Lockheed producer Williams utilized the Vidifilm system. The first program, six months ago, was a roundtable discussion on five F104 Fighter test pilot flight safety procedures. The program also lent itself ideally to the system.

Vidifilm is not applicable to all types of motion picture production. Its advantages are realized in all types of filming for coverage of the spontaneous, news, sporting or entertainment event, it's great for getting spontaneity through its live TV techniques. Panel shows, conferences or business meetings; demonstration footage for medicine and science, are some of the other subjects to which the system lends time and cost-saving advantages.

**If Plio-Magic can save you 65%  
on shipping one reel of film,**

**imagine how much you'll  
save with our new multiple-reel cases!**

Now you can ship 'em two, three or four at a time in handsome Plio-Magic molded cases. New improved Plio-Magic material makes them even more durable, lighter in weight than ever before. And you get moisture and dust-resistant protection, **without the need for cans.** What's more, Plio-Magic can't rust, crimp, bend, chip or discolor. And there's a new gentle-action to the exclusive Plio-Magic Positive Locking System. Just a twist of the wrist eliminates unwieldy belts and buckles forever.

Plio-Magic cases are supplied in 1, 2, 3, and 4-reel sizes for 1600 foot reels; 1 and 2 reel sizes for 1200 foot and 2000 foot reels; and in 1-reel size for 400, 600 and 800 foot reels.

Available in a wide range of colors, with custom imprinting, if desired. Write today to Dept. BS-4 612 Boulevard East, Weehawken, N.J., for money-saving PRC data kit.

Extension chart arms on Conference Center easel simplify visual comparisons and review of meetings.

## Multi-Purpose "Conference Center" Housed in One Cabinet

**Y**EAR'S OF EXPERIENCE, first attained in using visual presentation tools in a large company and later put to work in the creation and manufacture of portable easels and other visual presentation devices, have endowed the Oravisa Company of St. Petersburg, Florida with considerable know-how about the needs of business in this specialized field. The result of this experience has culminated in the introduction of a really good new idea: Oravisa's compact, all-purpose "Conference Center" for meeting rooms and executive office use. Within one two-door wood cabinet, measuring 56 inches by 48 inches (and just six and one-half

inches deep), Oravisa has put 12 varied and useful visual tools.

First of all, there's an adjustable projection screen, which eliminates "keystoning" and is concealed in a hinged case at the base of the cabinet. This 52 by 52-inch screen is designed to be pulled up, hooked onto a swing-out projection bar and can be tilt-adjusted to any desired projection angle. This adjustable feature assures a perfectly square projected image, regardless of the location of overhead, motion picture or slide projectors.

A pull-out flipchart easel is built into the Conference Center cabinet. It pulls out and

This "Product Idea of the Month" is a Versatile New Presentation With Choice of 12 Useful Visual

locks 23 inches away from the wall, permitting flip charts or large paper pad sheets to be turned over when desired. The easel holds the company's large 45 x 35 1/2-inch paper pads. This steel easel panel was also designed to be used as a magnetic chalkboard. Magnetic thumbtacks when it's used as a bulletin board or it can be combined with paper pads (the magnets adhere through the thickness of paper).

"Magicpanels" for Photo or Product Displays

A feature of the Center cabinet are the visual "Magicpanels" located on the inside of each cabinet door. They were made by a process in which Velcro fabric is inlaid on cork and can be used in two ways: (1) to hold up literature and pictures with ordinary thumbtacks, or (2) to display large, heavy three-dimensional objects. Product items weighing to several pounds apiece can be displayed simply attaching a small piece of Velcro tape to the back of the item.

There are other visual aids: two extension arms help to provide for review and comparison.

Conference Center has 12 visual tools within a compact wall cabinet, including the projection screen, a wall easel, magnetic chalkboard, and "Magicpanels" for pinups or product displays.

Projection screen can be instantly adjusted to any desired projection angle to eliminate "keystoning" of projected image. It is an integral part of the compact Conference Center.

"Magicpanels" can be used as bulletin board or for dramatic three-dimensional displays which even large, odd-shaped objects weighing several pounds can be instantly attached.

A concealed flip case at top of the cabinet will hold standard maps up to 50" in width. Maps rest against the closed easel panel so they can be easily inscribed with a handy grease pencil.

The easel panel pulls out and locks into position 23 inches away from the wall, allowing flip charts or paper pad sheets to be turned over when desired... one of the Center's best features.

Steel chalkboard panel can also be used as magnetic "whiteboard" with small magnets adhering to panel through several sheets of paper. Magnets can also be outlined with grease pencil.

Other New Products for Audiovisual  
 Projection and Projection Are Featured

charts used earlier in the meeting (see  
 picture); a full-length chart and chalk  
 board cardboard charts or other visuals.  
 The Oravisual Grip-Quick Chart Clamp  
 holds many sets of charts to be hooked onto  
 the easel during the course of a meeting, while  
 the map case at the top of the cabinet  
 accommodates any standard map up to  
 48 inches wide.

**Complete Package Includes All Accessories**

The Conference Center is housed in a custom-  
 built two door wood cabinet, finished in  
 walnut grain Texolite and can be  
 installed on any wall surface. You get  
 the complete package, with all accessories, including  
 chalk, markers, magnets, Velcro  
 tape, eraser, and a ruled guide underlay  
 which simplifies chartmaking. The price is  
 \$1,995. O.B. St. Petersburg. Write the man-  
 ufacturer, Oravisual Company, Dept. 14-D,  
 1500 N. St. Petersburg, Florida 33733. The  
 Conference Center is the featured item of the month  
 and it's one you won't see in a long time!

The Conference Center easel's magnetic chalkboard  
 is ideal for chalktalks, as a magnetic bul-  
 letin board, or for visual presentations using  
 magnets which hold firmly in place.

The visual unit is housed in custom-made  
 cabinet finished in walnut Texolite. 17  
 woodgrain finishes are available at ex-  
 tra cost from the St. Petersburg, Fla. maker.

## Change films in 2 seconds flat!

**Read how Fairchild's amazing new MoviePak cartridge  
 multiplies the value of your entire sound film program**

At last you can show any film, anywhere, anytime—without  
 threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge  
 you want, snap it into the Mark IV rear-screen projector, and  
 play. In broad daylight. In a prospect's office. In showrooms. At  
 trade shows. On sales counters. In training classes. In the  
 boardroom. To switch instantly to another film, just snap out  
 one cartridge, snap in another.

Every film you have can be easily converted to 8mm and  
 threaded into the MoviePak cartridge. Duplicate prints are  
 less expensive than 16mm, too. Now  
 you can unleash the full power of your  
 entire sound film program.

The Fairchild Mark IV projector is  
 portable, weighs only 20 pounds and is  
 always ready for action. No warm-up  
 time required.

For display use, it will run without  
 supervision, repeating automatically. It  
 takes up to 22 minutes of film with a  
 single MoviePak.

To see for yourself, just send in the  
 coupon.

**Bruce Harris Now Asst. Sales  
Manager at Arriflex Corporation**  
Bruce E. Harris, former assistant  
of the Arriflex Corporation of  
America, was named assistant  
sales manager last month by Paul  
E. Klingenstein, president of the  
camera firm. He has been active

Bruce E. Harris

in new sales post at Arri.

in the photographic industry for  
the past 12½ years, starting his  
career in retail sales at Peerless  
Camera Stores in 1953.

Harris joined Kling Photo Corpora-  
tion in 1959 as service depart-  
ment manager; after serving as  
manager of customer service, he  
became administrative assistant to  
that company's president. He was  
transferred to the Arriflex Corpora-  
tion of America in 1962 as Vic  
James' right hand man.

### Greene to Coordinate Overseas Marketing of Fairchild Products

Fairchild Industrial Products, a  
division of the Fairchild Camera  
and Instrument Corp., announces  
the appointment of Stephen Greene  
as marketing coordinator-export.  
He will report to Nat C. Myers,  
Jr., director of communications  
and services and will be responsi-  
ble for the overseas marketing of  
the division's 8mm audio-visual  
equipment, the new 900 single-  
system sound motion picture cam-  
era and a wide range of photo-  
instrumentation devices.

Greene will continue as Eastern  
U. S. regional sales manager for  
the firm's line of 8mm sound pro-  
jectors. A graduate of C. W. Post  
College of the Long Island Univer-  
sity, Greene joined the Fairchild  
marketing staff in 1963.

### Don Bain to Peckham Productions

Donald Bain has joined Peck-  
ham Productions, Inc., New York  
City, as a writer-producer-director.

## NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

### A. J. Miranda Named President of VPI Productions, Inc., N.Y.

George Tompkins, president of  
Video Pictures, Inc., New York,  
has announced that A. J. (Pete)  
Miranda has assumed the post of  
president of VPI Productions, Inc.  
— New York TV commercial pro-  
duction affiliate of Video Pictures.

Mr. Miranda has resigned his  
present post as vice-president and  
eastern director of TV-Radio at  
Campbell-Ewald Company.

Mr. Tompkins issued the fol-  
lowing statement: "This is, in ef-  
fect, a new post created specific-  
ally to give Pete Miranda full su-  
pervisory status in an executive  
capacity at VPI Productions, and  
to allow him to lend his creative  
talents to VPI clients whenever  
and however such abilities are  
needed."

Mr. Miranda has left Campbell-  
Ewald after 15 years, much of it  
spent on the Chevrolet account.  
He began as a radio-TV copy-  
writer, then worked as a writer/  
producer.

### Hulfish Joins Elco Optonics as National Head, A-V Products

The audio-visual division of  
Elco Optonics Corporation, Wil-  
low Grove, Pa., has named James  
W. Hulfish, former director of in-  
formation for the National Audio-  
Visual Association, as its national  
products manager. Announcement  
of the appointment was made last  
month by Leo Kagan, marketing  
vice-president of Elco, a widely-  
known manufacturer of high-re-  
liability electronic equipment.

The new division was formed  
in the summer of 1965 after two  
years of research and develop-  
ment in the a-v field. At Elco,  
Hulfish will be responsible for  
the marketing of the company's  
new sound filmstrip  
projector, Mastermatic  
1, which the company  
recently introduced in  
New York.

James Hulfish

### Jack Zimmer to Head Television Production for Cincraft, Inc.

J. L. "Jack" Zimmer has been  
appointed to the newly-created  
post of vice-president in charge  
of television production at Cin-  
craft, Inc., Cleveland. According  
to Cincraft president Ray  
"the new division will en-  
compass features, films and television  
commercials for business and  
industry." Vice-president and  
manager Paul Culley called the  
appointment "a first step in  
major expansion move by Cin-  
craft."

Zimmer began his career in  
March of Time division of  
Inc. and has been active in  
production since 1948. He was  
director of television, radio and  
film production for the Grand  
Eshleman advertising agency.

### Myrna Ravitz Joins Nile as Stylist and Casting Director

Fred A. Niles Communication  
Centers, Inc. has engaged Myrna  
W. Ravitz to fill the newly-created  
post of stylist and casting director.  
Her previous experience included  
service as assistant to the director  
of the Radio-Television Institu-  
tion of Edward H. Weiss and  
company advertising agency and  
Canadian representative of  
key Schwarz Productions.

### Alfred Montalvo Joins Northwestern Inc., Portland, Ore.

Alfred Montalvo has assumed  
management of the editing, in-  
formation and title departments  
of Northwestern Incorporated, Por-  
tland, Ore. studio. His film credits  
include work on such prize-win-  
ning titles as *Surf, The Right  
Live, Study in Wet* and *Trains  
line* to name a few.

Ceco to Handle Sales of  
Doiflex 16" Reflex Camera  
Exclusive North and South  
American distribution of the new  
16mm professional motion  
picture camera has been granted  
to Ceco, Inc. by the Doif Works  
of Tokyo, makers of the region-  
ally famous movement camera.

Doiflex 16" Reflex Camera  
The Doiflex 16 will be marketed  
through F&B/Ceco branches as  
part of a large group of fran-  
chisees.

The camera features a thru-the-  
lens viewing system and a  
sliding pin pull-down claw  
mechanism. Its variable-speed motor  
(with rheostat) is driven by a  
6-volt battery. The 3-lens  
system accepts standard "C" mount  
lenses including latest zoom types.  
A frame counter and tachometer  
are standard, as is the eye-adjust-  
able viewfinder. A TV frame  
counter is on the viewing ground

Available accessories include a  
power on-off switch, stop-mo-  
tion with reverse hand  
and frame counter. Soon to be  
available are: constant-speed  
synchronous motors; 400-foot  
film; an adjustable sunshade  
with filter holders. The  
Doiflex 16 is priced under \$1,000.  
Write our New Products Desk  
at F&B/Ceco headquarters at 315  
West 42nd St., New York, New York  
for descriptive literature. •

Electric Slide Changer  
Note for Forward-Reverse  
Operation of a new electric  
slide changer for 3 3/4 x 4-inch  
slides which operates forward and  
reverse by remote control is un-  
der development. Genarco, Inc., Jamaica,

with as many as 60 glass-mounted  
slides and transparencies in Po-  
pout mounts intermixed can be  
changed in a pack in any one of the  
positions. During the presentation,  
slides can be added or removed  
without changing the sequence  
of the other slides, without  
interrupting the operation.  
The reversible slide changer,  
Model 5, was designed for the

Genarco 3000-watt slide projec-  
tor, Model SM3, but will also be  
available for the Beseler Slide  
King, the A.O. Delineascope, the  
Strong Arc Slide Projector, the  
Bodde, Translux and other pro-  
fessional slide equipment of this  
type. •

**DuKane's Improved "Micromatic"  
for Sound Filmstrip Showings**

An improved model of the Du-  
Kane "Micromatic" sound slide-  
film projector has been introduced  
by that company's Audio-Visual  
Division. The new machine fea-  
tures a "program hold control"  
and will show 2 x 2 slides as well  
as automatic sound-filmstrips.

The Micromatic has its own  
built-in screen for desk top show-

Light, Bright DuKane Micromatic  
projectors or may be used for larger  
audience projection on straight  
throws. Get new literature from:  
DuKane Corporation, A-V Divi-  
sion, St. Charles, Illinois 60174  
or request from our New Products  
Desk at BUSINESS SCREEN. Use  
your company letterhead. •

**Heurtier 8mm Sound Projector  
Distributed by Cinema Beaulieu**

Cinema Beaulieu, Inc. is han-  
dling U. S. distribution of the  
French-made P.6-24 Heurtier  
8mm sound motion picture pro-  
jector. The unit consists of a silent  
8mm projector locked to an ampli-  
fier and sound head; the projector  
may be removed from the sound

Heurtier P.6-24 8mm Projector

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

units by simply unscrewing one  
knob, reverting to a silent pro-  
jector.

Sound unit has three magnetic  
heads (one each for erase, replay  
and recording), permitting true  
monitoring off the sound track  
during recording. Two inputs (for  
microphone and gram) each have  
their own sound level control to  
allow full mixing.

The P.6-24 Heurtier has a 6-  
watt valve amplifier and separate  
10-inch speaker and provides  
semi-automatic threading over the  
sound heads. Write: Cinema Beau-  
lieu, Inc., Los Angeles, Calif. for  
technical bulletin or request from  
our New Products Desk. •

**F&B/Ceco's Super Baltar Lens  
for Mitchell BNC Reflex Camera**

F & B/Ceco, Inc., New York  
motion picture equipment supplier,  
now has available Super Baltar  
lenses in Mitchell R-35 mounts,  
fitted to the firm's exclusive  
Mitchell BNC Reflex camera con-  
version.

This new combination of lenses  
makes it possible to use them in-  
terchangeably on the BNC-Reflex,  
Eyemo-Reflex, and the R-35  
Mitchell, plus the 25-250mm An-  
genieux zoom lens. Focal lengths of  
the Super Baltars range from 20-  
mm to 200mm, and are available  
for use with follow focus.

The optical side viewfinder on  
the BNC-Reflex is now an optional  
accessory since the exact field of  
view can now be seen directly  
through the camera while it is run-  
ning. This exclusive feature takes  
the guesswork out of dolly or  
zoom shots, and insures accurate  
centering without parallax prob-  
lems.

Mitchell BNC Reflex camera  
with zoom lenses and Super Bal-  
tars are now available from F & B/  
Ceco's camera rental departments  
in New York, Miami, Hollywood,  
Atlanta, New Orleans, and Wash-  
ington. •

**Rear-Screen Projection Theater  
for Carousel on Technicolor "8"**

A cabinet "theater" which will  
house either the Eastman Kodak  
Carousel slide projector or the  
Technicolor 8mm "Instant" movie  
projector and the Cousino Audio  
Synchro-Repeater for sound is of-  
fered in the RPI-50 introduced  
by the Projection Theaters Divi-  
sion of Motiva, Ltd., 87-73 Kings-  
ton Place, Jamaica Estates, N. Y.

Motiva's Rear-Screen "Theater"

The "theater" cabinet has an 18  
x 18-inch rear-projection screen;  
is made of aluminum and weighs  
less than 20 lbs. Write our New  
Products Desk for literature and  
prices. •

**Gordon Enterprises Has Barney  
8mm Film Slitter, Make-Up Table**

Gordon Enterprises, North Hol-  
lywood, Calif., is the exclusive  
distributor for the new 8mm film  
slitter and make-up table devel-  
oped by Walter Barney Labora-  
tory. The unit slits and rewinds

Barney Slitter, Make-Up Table

to pre-determined lengths all 8mm  
films, converting from processing  
lengths into 50-foot lengths at high  
speed.

A unique feature of the makeup  
table enables it to handle both  
double-8 and super-8 films with  
a change of a single guide plate.  
Complete technical data is avail-  
able from Gordon Enterprises,  
5362 N. Caluenga Blvd., North  
Hollywood, Calif. •

### General Electric Studio Lamp Has Tungsten-Halogen Source

☆ A new 750-watt tungsten-halogen light source with a planar filament, operating at a color temperature of 3200 degrees Kelvin is the first of an improved family of incandescent spotlight lamps now

available for motion picture production use. It was introduced in March by General Electric's Large Lamp Department.

GE notes that the new lamp has "four times longer life, four and one-half times greater total light output over life, higher stability of light output and color and a more compact size than the lamp it directly replaces." Primary application is in focusable, lens-type spotlights. Improvements in performance and size are attributed to the use of a Quartzline (GE reg. TM) lamp as the light source. The lamp is mounted inside a glass outer bulb, which has a medium bipost base. •

\* \* \*

### Planar Filament Quartz Lamp in Mole-Richardson Baby Solarspot

The first in a series for Planar Filament Quartz lamps for use in Baby Solarspot w/ Quartz Lamp

been introduced by the Richardson Co. The new was designed and developed by General Electric for use with the company's Baby Solarspot projector requiring an adapter.

For source data and technical bulletin 302 write: M-R 930 N. Sycamore Ave., Hollywood, Calif. 90038. Mention BUSINESS SCREEN. •

### Paulmar, Inc. Has New Model 16mm Film Inspection Machine

A new 16mm film inspection machine, housed in a molded fiberglass cabinet that is resistant to film cleaning solutions and chemicals, is being marketed by Paulmar, Inc., North Chicago, Ill.

The new Model 90 employs "span detection" unit which gives inspection of defects the entire face of the film; electrical contacts are silver-plated. Write our New Products Desk for literature and prices.

TV Camera on the job . . .

**T Recording Camera**  
**Half-Hour Program Anywhere**  
 Vestel Company, Redwood City, Calif., has introduced a portable television picture recording camera (hand-carried and battery-powered) for shooting 30-minute TV recordings with sound. The Vestel Television Recorder enables a single operator to shoot TV material (tape) with sound in any location indoors or outdoors. It was designed for television news reporting. According to Vestel executive Robert [Name], "this camera, without external power supply, will record tape action pictures where a man can walk, climb, run, etc. It is complete with TV microphone, active TV viewfinder, and microphone, weighs only 15 pounds. Its compact, rugged recording mechanism has 250 times the frequency recording capacity of hi-fi recorders, weighs an additional 10 pounds. The recorder holds a 30-minute supply of 1/2-inch wide magnetic tape on interchangeable batteries, adding only 10 pounds for a total video recording module weight of 23 pounds. Write the New Products Department for literature." •

**Portable Stairway Scaffolds Are Useful Picture Production Tools**

☆ Fast installation and sturdy performance are features of the Stairway Scaffold, a useful film production tool manufactured by Up-Right Scaffolds, 1013 Pardee St., Berkeley, Calif. This department first saw these set up at Cypress Gardens in Florida where the "Stairway" is frequently used for outdoor shooting.

The scaffolds consist of standard, lightweight aluminum six-foot sections. Built-in inside stairways

**Stairway Scaffold on location**  
 increase safety for carrying cameras, etc. The sections unfold in 10 seconds; fold flat to a package only 6 1/2-inches thick for storage or shipping. No bolts, nuts or loose parts. Write for literature to the address above or check with our New Products Desk.

**Low-Cost Pictorial Displays With This Photo-Motion Unit**

☆ A low-cost point-of-purchase display unit is offered by the Photo Motion Corporation of America, New York City. It presents pictorial images in full color with the illusion of motion.

Photo Motion employs a photographic film with several photographic images on its surface. Each image is composed of tiny segments coupled to a light polarizing chemical and all segments are polarized in the same direction.

**RADIO VISUAL AND RECORDING COMPANY**

Working Partner to handle distribution or Merger with other companies. Have completely equipped studios; 1600 sq. ft., overhead. Young, creative staff capable of handling all professional photography and audio.

## Sale of 13,000th Maier-Hancock Splicer Marks 20th Anniversary

☆ The 13,000th Maier-Hancock portable hot splicer for picture films, sold to the Canadian Broadcasting System, helped the company begin an eventful anniversary observance last week.

In announcing the new record, Arthur H. Bolt, vice president of Maier-Hancock, also noted the wide professional acceptance of the splicer, attributing its popularity to a versatile handling of all film sizes, including the Super-8.

"Low-visibility splicers to ASA standard, and our 1 1/2 carbide blade have helped earn the name 'Maier-Hancock' synonymous with perfect splicing," he said. The company is located at 14106 Ventura Blvd. in Sherman Oaks.

## Consolidated Film Now Equipped for All 16mm Ektachrome In-

☆ Consolidated Film Industries, Hollywood, Calif., has completed installation of 16mm Ektachrome processing equipment. The West Coast lab can now process 16mm Ektachrome films, including the new, faster types requiring special ME-4 developing.

## Reeves Sound Studio Acquires Two Norelco Color TV Cameras

☆ Reeves Sound Studios, a division of Reeves Broadcasting Corporation, has taken delivery of two Norelco PC-60 Plus Color Television Cameras for use in making color video tapes.

The cameras are used exclusively in metropolitan New York for the shooting of color commercials and special productions which are recorded on Reeves high-quality video tape recorders.

Plumbicon cameras are manufactured at the studio equipment operation of North American Philips Company, Mt. Vernon, N.Y., and are marketed by Reeves Electronics Corp., New York. The U.S. television broadcasting industry and to educational and industrial TV facilities.

## "Creativity Unlimited" a New Production Firm in Manhattan

☆ A new film production firm headed by Gil Lash, has been formed in New York City. Creativity Unlimited, with offices at 545 Fifth Avenue, will specialize in films for industry and television commercials.

(CONTINUED FROM THE PRECEDING PAGE 44)

tunities for film producers to utilize film manufacturer's engineering service representatives in the solution of difficult technical problems. These engineering services, provided by most film manufacturers, allow every producer to stay right on top of every known technique for accomplishing every desired result.

**New Color Films Have Been Real Help**

One mark of the film medium is that there is a continuous effort being made by the manufacturers to improve and tailor products to meet current demands. For example, just about when we found a serious color market developing in early 1964, Eastman introduced improved color negative and print films. These, we felt, gave the film producer a quality lead over the man using tape.

With these and other improved film emulsions, we are able to produce a more realistic color picture for a growing television market just at the time when this tool is becoming a most useful sales device. The new color films not only produce truer color images, but because they provide improved grain characteristics, we are able to utilize optical effects in color more effectively. This allows us much more creative leeway in producing color commercials.

**Clients Have Right to Expect Quality**

Foot per foot of finished film, television commercial production, while competitive, costs more than any other type of movie photography. A client has the right to demand results for dollars spent. Quality results are what we aim for in the nearly 800,000 feet of television commercials filmed and processed at Jamieson annually.

Filmed television commercials can be a satisfying medium for the industrial motion picture producer. They can also be a profitable addition to many independent producers in their own right and at the same time, can produce added business in the subsequent assignment of long length industrial films.

The above is no small possibility. During the past years many industrial films have been produced at Jamieson as a direct result of the satisfied television commercial customers. This can very often be the successful conclusion of a skillful program that includes the TV commercial market.

## postscripts & profiles

### New York Group Forms 8mm Film Institute

IS 8MM FILM simply another dimension for the motion picture, like 16, 35 or 70mm, or is it a *medium* unto itself? There are those in the field of factual films, whether for education or industry, who look to 8mm as simply another and more convenient way to get the message to its receivers.

But a newly-formed "International 8mm Film Institute" recently established in New York City by a group of business men active in the 8mm field, believes that the proliferation of developments in this new dimension needs "coordination of information" and special study of its potentialities.

On April 13, a group of 22 people met at the City Squire Inn in Manhattan to form the new Institute and elected Alan Rogers, a leading spirit in this movement, as their president pro-tem. Sam Bunchez, of the Vacuumate Corporation, was named its vice-president and Richard Smith, of JM Developments, has been designated secretary-treasurer. Alan Rogers is with Portafilms, a producing company.

The Institute's purpose was set forth as "providing coordination of information in the 8mm field and to do promotion and public relations on behalf of the professional 8mm industry, particularly among film laboratories, equipment makers and users of the techniques which apply.

The new organization is the

outgrowth of an informal steering committee formed several months ago by Ralph Del Coro, vice-president of Modern Talking Picture Service, Inc., Bunchez, Rogers and Everett Hall, of Cine Magnetics, Inc. The committee sought to bring together companies and individuals representing all facets of the 8mm "industry" including commercial suppliers as well as film users.

Two committees were named by the group at their April 13 meeting. The committee on organization and by-laws includes Steve Green, of Fairchild; Hal Weiner, of Portafilms; Preston Holbner, of McGraw-Hill; Hall and Rogers. The second committee, on finance and membership, includes Bill Howard, of Color Service Corp.; Bernard Drayton, of Magnasound; and Ben Peirez, of Viewlex in addition to Bunchez and Del Coro.

#### Moody Institute of Science Has New Building in Whittier

Reflecting nationwide interest in its growing library of Natural Science Films, the Moody Institute of Science has moved to a new 34,000 square-foot facility at 12000 E. Washington Boulevard in West Los Angeles.

In addition to expanded offices and facilities for film duplication and processing, the building provides space for increased film production of Moody Science Films.

### Prints Going South? Meet David Grajeda

DR. DAVID GRAJEDA, general manager of Mexico City's Audiovicentro studios, has recently visited several cities in the United States to demonstrate his company's Spanish language versions of films produced in the U. S.

Dr. Grajeda fell in love with the film medium as a young man of 15, and has been active in film production ever since. Along the way, he studied medicine, and received his M.D., but decided that films were his main interest, so the medical profession's loss has been our gain.

Mexico City has been the leading city in Spanish language dubbing for many years. Dr. Grajeda told us. Since 1951, most American TV program series have been dubbed there, until now an average of ten shows are completed daily. Over 200 skilled actors take part in this work.

Audiovicentro does two TV shows a day, but the firm's main interest and specialty is in technical, industrial and scientific translations. About twelve industrial films a year are produced for Mexican clients and over 400 American films have been translated and narrated in Spanish.

Mexico leads in this activity, Dr. Grajeda said, because Mexican speech is more acceptable throughout Latin America than that of any other country. In fact, films made elsewhere usually try to imitate the Mexican style of speaking. Such accents as Argentinian and Puerto Rican are quite a bit different from the mainstream of New World Spanish and cannot be used for films in distribution all over the hemisphere.

Audiovicentro has compiled a dictionary of over 400 Spanish words which are not suitable for any films in Latin America because their meanings are different in the various countries. A word which may be quite respectable in Venezuela can be shockingly obscene in Chile.

This secret of knowing all "localisms" to avoid is a key factor in Audiovicentro's successful operations for such clients as McGraw-Hill Text Films, Encyclopaedia Britannica Films, Modern Learning Aids, U.S. Department of Agriculture, Bray Studios, Fred Niles, and others.

In practice, films are dubbed by a looping process. 150 loops in a work print are made for a typical 27-minute film. Voices are chosen to match the style and personality of the English narrator. Audiovi-

centro is careful to choose the most thoroughly authoritative and original voices, far removed from the advertising "pitchman" style so familiar on Mexican radio.

There are no customs problems of shipping films to Mexico for dubbing. After certain forms supplied by Audiovicentro are filled out to facilitate handling, shipment is jet fast. From work print and English script, Audiovicentro produces and returns a 16mm synchronized tape in Spanish ready for mixing.

#### Honor Fran Tuchman as Woman of the Year

The Advertising Association of the West has named Fran Tuchman, vice-president and creative director of Harris-Tuchman Productions, Inc., Holliston, Calif., as "Woman of the Year" for 1966. She was presented with an AFA-AAW Printer's Ink award medallion by Oliver Crawford, chairman of the Western advertising group.

The presentation was made at a jointly-sponsored dinner at the Newspaper Executives Association and the Los Angeles Advertising Women. A past president of the LAAW, Mrs. Tuchman has headed her company for more than 20 years as creative supervisor of motion pictures and filmstrips, being the winner of over 27 film awards.

#### Kalart Appoints Harvey C. ... Manager of Product Marketing

The Kalart Company in Plainville, Connecticut manufacturer of photographic and optical visual equipment, announced the appointment of Harvey C. ... as the firm's marketing manager.

#### Name Doering District Manager in A-V Division, DuKane Corporation

V. C. "Pete" Doering has joined the Audio-Visual Division of DuKane Corporation as a district manager specializing in service to the educational market. His appointment was confirmed last month by sales manager Howard Turner.

A former high school principal and teacher who served in the Office of Naval Research, Research Devices Center, Doering has broad experience in the educational film market as manager of the School Service Department of The Jam Handy Organization and later with Norwood Films.

## funny, you don't look like a salesman

Maybe not. But it sure sells like one. Gets in while the boys with their catalogues are still sitting in the lobby. Why? Because everyone likes a show. The New *Technicolor Super 8 Instant Movie Projector* is the ideal way to introduce new products to your prospects - in color - in live motion.

Your salesmen will love it and use it. Weighs only 3

pounds. Soapstone cartridge, interlock cammate, 100mm, auto-rewind. Gives bright, bright picture in any room.

For in-store selling of your products, we've got a new projection model - gives a sales pitch you simply won't get otherwise. Easy built-in displays.

Need a film? We can handle that too.

For those in Line and Staff Management, who supervise the work of others:

# SUPERVISOR TRAINING ON HUMAN RELATIONS

Every Company's Chief Executive knows the importance of having all managers and supervisors develop a deep understanding of human behavior . . . and how to successfully achieve better human relations with others . . . how to develop an esprit d'corps, which will have everyone trying harder . . . to achieve more.

### Why so many management failures?

One of the country's largest institutions in its field, after researching the problem, discovered that of those who fail as managers . . . 2% do so because they lack technical knowledge . . . while 98% fail because they lack "people knowledge" and how to work with others.

### How to gain "people knowledge"

"SUPERVISOR TRAINING ON HUMAN RELATIONS" is a complete 16 hour course, including filmstrips, manual and supplementary material, which dramatically demonstrates how to successfully handle such supervisory responsibilities as:

- Promoting Cooperation
- Interpreting company policies
- The Supervisor as a representative of management
- Maintain discipline . . . and many other equally important supervisory responsibilities

### How to "judge" the program before you buy

Don't take our word for it. Our "preview" offer permits you to "see and judge" the program for yourself. A small handling charge, credited to the purchase price, allows you a 5-day examination period of your choice.

### Video Pictures and Electrographic Corporation Agree on a Merger

☆ Video Pictures, Inc. and the Electrographic Corporation have announced plans to merge. The announcement was made by George Tompkins, president and chief executive officer of VPI and by Frank E. Reilly, president and chief executive officer at Electrographic.

Electrographic, a publicly-owned company listed on the American Stock Exchange, is one of the country's larger producers of services to the printing, graphic arts and advertising industries. VPI, a privately-owned company, is a specialized producer of TV commercials with headquarters in New York and other operations in Chicago, Miami and Atlanta.

Under the contemplated agreement, subject to the approval of the boards of directors of both firms and by the shareholders of both, Electrographic will acquire VPI in exchange for a substantial block of its stock. Mr. Tompkins will remain as head of VPI and will join Electrographic's board. •

### DuPont Re-Aligns Photo Product Sales in New Marketing Division

☆ Sales functions in the Du Pont Photo Products Department have been regrouped under a new Marketing Division, headed by Ivar A. Lundgaard, now director of sales for the department. The new grouping was made to permit concentration of effort on major markets and to facilitate future growth.

Heading one of the division's two principal groups and directing field sales, planning and technical activities in major marketing areas for that segment is Frederick B. Astley, who has been director of sales for motion picture and x-ray markets.

All distribution, market development and export sales activities are now centered in a marketing service group headed by Robert N. Kidwell, former manager of the southwestern district sales office in Dallas. •

### Martin Lobdell Appointed Chief of USDA's Motion Picture Service

☆ New Chief of the Motion Picture Service, U. S. Department of Agriculture, is Martin H. Lobdell, formerly Associate Chief of the Service who first joined that agency in 1951 as a cameraman-director-editor.

Raised on a Wisconsin farm, Lobdell studied film production at the Art Center School in Los Angeles and at the University of Southern California. He received his BS in Education and an MS in Audio-Visual Education from the University of Wisconsin. His career as a photographer began in the U. S. Army Engineer Corps and during World War II he was a crew chief of a combat film unit in the U. S. Army Signal Corps.

After serving USDA's Motion Picture Service from 1951 to 1956, he was named Director of the

Martin Lobdell: New Chief of USDA Motion Picture Service

Motion Picture Division, Office of Civil and Defense Mobilization. In 1961 Lobdell returned to USDA as Associate Chief for Production and Laboratory Services until his recent appointment to succeed Calle A. Carrellew who retired last December. •

### Research Groups Join Du Pont to Form Holotron Corporation

A new corporation to develop basic inventions in the field of holography (three dimensional photography without lenses) has been formed by Scientific Advances, Inc. (SAI) and the Du Pont Company. The new company, known as the Holotron Corporation, holds exclusive rights to inventions growing out of research on holography at the University of Michigan and at the Columbia of Pacific Northwest laboratories of Battelle Memorial Institute, parent corporation of SAI.

Holography involves the use of a laser beam to record on photo-

graphic film patterns than can subsequently be reconstructed as a three-dimensional image. Early work indicates that holograms in color are practicable; holograms in motion picture form may eventually be developed. Inventions underlying off-axis photography were made by Emmett N. Leith, Juris Upatnieks and others at the Radar and Optics Laboratory at Michigan. Rights in the inventions were acquired by The Battelle Development Corporation.

### Surgeon General Cites J. D. Clark for Medical Self-Help Program

The Surgeon General of the United States has cited James D. Clark of Atlanta, assistant to the director of the Public Health Service Audiovisual Facility in that city "for his work in developing the national Medical Self-Help program."

The citation was presented to Clark at an invitational ceremony at the Facility by Dr. James Goddard, Assistant Surgeon General and Chief of the Communicable Disease Center. The Medical Self-Help Program, initiated in 1959, is designed to teach the American civilian population the basic necessities of medical care for them-

selves and their families in the event of natural or other disasters.

More than 54,232 courses in Medical Self-Help have been taught in schools and communities of the United States through November, 1965. There are some 1,705,750 graduates of the course, many of whom are teaching it as part of high school or junior college curricula.

In addition to printed texts in each course area, the instruction program includes filmstrips, still photos and instructions for teachers. In 1964, Clark was assigned direct responsibility for coordinating production of 13 Medical Self-Help motion pictures created by the Audiovisual Facility. These are now in use with the teaching program. A retired Major who had a distinguished 22-year career in the Air Force, Clark has been associated with the Public Health Service Audiovisual Facility since 1963.

### Change in Company Name Signals Acme's Videotape Service Growth

It was inevitable that its increased involvement in color videotape syndication and dubbing, as well as increased demand for tape-to-film transfer, would

bring about a now confirmed change as Acme Film Laboratories, Inc. became Acme In Videotape Laboratories. Sawelson, general manager of the Hollywood-based firm, announced the change in May.

**SMPTTE Book on "Special Effects in Motion Pictures" Out** *Special Effects in Motion Pictures*, a new book by Frank Clark, professional Hollywood effects man, was announced by the Society of Motion Picture and Television Engineers.

*Special Effects* emphasizes mechanical special effects—those created before the camera during filming. Such effects include crumbling buildings, erupting volcanoes, snowfall, earthquakes and prehistoric monsters, are described and illustrated.

Describing how special effects are created, Clark occasionally gives anecdotes about special effects men and how certain effects—seemingly impossible at the time—were achieved. He traces the history and development of special effects, citing examples from the early silent movies as well as from the modern screen spectacles.

**Executives See a Packaging Film in Alcoa's Airborne "Showcase"**

The Aluminum Company of America has brought out a new film for showing to executives of companies which are major users, or producers of, packaging materials.

The "projection room" for the film in use is part of an imaginative new marketing approach. A DC-7C, the Alcoa Forecast, was purchased last year by Alcoa and transformed into a flying ambassador of aluminum. The airplane contains an exhibit area, management conference lounge, secretarial office, and a completely equipped galley. The airborne showcase was developed to demonstrate the wide range of Alcoa products and applications to selected top management.

The film was produced by Gerald Productions, Inc., New York, with Lou Mucciolo as executive producer, Gerald Auerbach, director, George Cannata, art and animation designer, and Walter Kiernan, narrator.

An unusual opening completely omits all credits, setting the stage for one of the longest, most provocative verbal closing titles in existence: *How To Make A Buck Even Though 114 Competitors Are Trying To Cut Your Heart Out and Serve It On A Silver Platter at 30% Off.* This is spoken by Kiernan at the film's end after the screen has gone totally black.

\* \* \*

**Eastman Chemical Film Promotes "Eastflow" Packaging Process**

The Eastman Chemical Company, a subsidiary of Eastman Kodak, has released a 16mm film which will be used to introduce its new transparent packaging process, Fastoflow.

The 10-minute color film, entitled *A Product Is Like A Woman*, was produced by Elektra Films,

Marine Honor Plaque Recipients: G. Carlton Hunt (left), president of DeLuxe Laboratories; and Sidney Solow (right), president and general manager of Consolidated Film Industries. Both as men received Marine honor plaques for their companies' contributions to Corps' "Toy for Tots" project. Lt. Col. Gle W. Rodney, head of Corps' Invention Office in Hollywood, made the presentation last week.

New York. It took four months to produce and makes extensive use of such effects as stop-motion, freeze-frame photography and sound track featuring electronic music in relating the way a woman "packages" herself in transparent packaging process.

Scenes of a bikini-clad girl on the surf are used to demonstrate how the Eastflow process works. Beach scenes were filmed on location in the Bahamas and packaging process scenes at the Eastman Kodak plant in Rochester, New York.

Sixth "Skyport Cinema" was opened in mid-May at Hopkins International Airport, in Cleveland, Ohio, by Modern Talking Picture Service.

## Sixth "Skyport Cinema" Is Opened in Cleveland

**T**RAVELERS AWAITING PLANES at Hopkins International Airport in Cleveland, Ohio, are the latest of the air travel fraternity to enjoy free films as Modern Talking Picture Service, Inc. announced the opening of its sixth "Skyport Cinema" installation in that Ohio city last month.

The free movie lounge, located in the seating area near the main entrance, accommodates 50 people and will run sports, travel and business films from 10:00 a.m. until 8 p.m. daily, according to Modern vice-president William M. Oard. Al Shobel of Modern's Cleveland office is in charge.

With the first Modern "Skyport Cinema" already operating in Cincinnati where the first of these installations originated 18 months ago, this second Ohio airport theater joins a growing list of big city terminals which includes the Twin Cities, Kansas City, Atlanta and Denver Airports.

John A. Doyle, commissioner of Hopkins International and J. Morgan Lauer, manager of operations, have both expressed the view that the new film lounge will be a valuable addition to passengers' comfort and interest while they are in the terminal. According to a survey taken at other ports where "Skyport Cinemas" have been

operating, the average time viewing film has exceeded a per person.

**Are your films stored in  
the best of hands?**

When National Association of Manufacturers told press about "MIND" program, these principals were on hand (left to right): Charles de... director of NAM project; W. P. Gullander, president of NAM; Henry Basham, Jr., senior v.p. for personnel; and Earl Sandmeyer, vic... dent, public relations, both of Chemical Bank New York Trust Corp.

## NAM Unveils Program to Aid Unemployed

"MIND" Program a Pilot for National Effort to Develop Skilled

**R**ESULTS OF A pilot training program designed to make "unemployables" employable were disclosed on May 10 by W. P. Gullander, President of the National Association of Manufacturers at a news conference conducted jointly with Chemical Bank New York Trust Company, a leading participant in the social research project.

The program is called MIND (Methods of Intellectual Development) and consists of two parts: basic educational and typing.

The basic education course demonstrates how the reading, writing and arithmetic levels of some functional illiterates and school dropouts can be raised three or four grades in only six to eight weeks.

Participants, for example, entered with reading skills that tested at grade levels from 3.9 to 9.3. Their arithmetic scores were even lower. After six weeks enrollment in the rapid-learning course, they showed an average three and one-half grade jump in reading. Their arithmetic and word-meaning

scores showed increases of two grades.

"While industry has a pressing need for trainable applicants for jobs presently existing for applicants whose ability to read and do simple arithmetic problems is below young people can be trained and inexpensively brought up to an eighth grade level in three months, we believe we can demonstrate for industry's use a program that can be used in the nationwide assault on the unemployment problem," Mr. Gullander said.

The NAM staff researchers developed the typing portion of the MIND program to show how programmed learning techniques and audio teaching equipment could be utilized to improve skill needed in almost every industry.

Typing students had access to audio devices on their desks to select one of four lessons transmitted simultaneously from a machine nearby. The lessons varied in speed and difficulty. Students (CONTINUED ON PAGE TWENTY)

100,000 Showings of "This Is New Jersey" Carry the Garden State's Story to 750,000

When the title *This Is New Jersey* first came on the screen May 11 at the Joseph P. Kamp School in Cherry Hill, N. J., it marked the 100,000th showing of a film that has traveled all over the world telling the Garden State's story.

Produced for New Jersey Bell Telephone Co. by Owen Murphy Productions, the 10-minute Technicolor film provides a panoramic view of the state — its farmlands, mountains and scenic beauty. It covers the varied diversity of the state, both at work and at play, all in historic perspective.

The film was premiered March 7, 1951, at the Robert Treat Hotel in Newark, before a distinguished audience that included former Governor Robert B. Meyner. Since then it has carried the message of New Jersey to

## THE EDITORIAL VIEW

(CONTINUED FROM THE PRECEDING PAGE)  
estimated 7,334,000 persons, more than the population of New Jersey, in practically every state of the union and in many foreign countries.

Prints were presented to the New York State Department of Education, one copy to each country superintendent of schools. Three were sent to the United States Information Agency for showing throughout the world. It became the official state of New Jersey at the Brussels World Fair in 1958.

An exchange teacher used it in England to teach her class about the United States. A Greek aviation cadet showed it in Thessalonica, Greece to illustrate life in America. An Australian wood Rotary Club student brought it down to Australia.

Executives of a pharmaceutical firm showed it to their home office in Switzerland. They reported later that their Swiss counterparts an idea of life in America. They reported later that the film was a major mental in the company's decision to build a second United States plant in southern California.

But most requests for viewings are from schools, women's clubs, Kiwanis clubs, groups and church organizations.

The film remains in constant use. An average of about 30 showings a week. Over 150 prints have been worn out in the past 10 years. Today, there are 165 prints in constant term loan with schools and other organizations throughout the state.

### *Predicted Upsurge in Theater Construction to Increase Audience for Sponsored Advertising*

☆ The president of General Cinema Corporation, largest shopping center theater chain in the country and operator of 193 theaters in 21 states, predicts an upsurge in independent theater construction. Says Richard A. Smith, "New units will be opened in regional and metropolitan centers within the next three years. Another 450 will be built on free-standing locations."

*Why is this important to us?* Neighborhood theaters welcome good short subjects and they're in extremely short supply. Here's a growing opportunity for American business to supply needs.

# Expert?

Anyone can run the Autoload projector, because it threads itself—completely, automatically.

The Autoload is so simple to set up and operate that any ten year old can do it in under a minute.

And you can't forget how. Just slip the film end in and the Autoload threads itself—from start to finish. It's the simplest of all 16mm sound projectors to run. So everyone's an expert projectionist with a few minutes of instruction.

The Autoload is always in perfect adjustment, too. You don't have to worry about film flutter or spilled film. And when you show a film, you can stop on a

single frame, reverse to a scene for added effect and show pictures in a lighted room if necessary.

The Autoload is light, compact and comes with its own built-in speaker. Easy to move. Simple to set up or knock down.

So if your present projector takes an expert to run, we'd like to show you why so many business men are trading in on the Bell & Howell Specialist Autoload Filmosound 16mm Sound Projector. Just tear out the coupon for details.

Specialist, Autoload and Filmosound are registered trademarks of Bell & Howell Company, 7100 McCormick Road, Chicago, Illinois

**Gentlemen: We'd like to see why the Autoload is the world's largest selling 16mm sound projector.**

"O WHAT A GOODLY OUTSIDE FALSEHOOD HATH."

—*Shakespeare*

In the business of communication  
competition is keen: ignorance,  
prejudice, self-interest, insecurity,  
fear, deception, pride.

Fallacy still has a "goodly outside".

Truth often needs a little help.

the pre-recorded instructions through headphones. By eliminating the need for a full-time, professional teacher, the overhead cost of training is significantly lower.

The initial hardware and software used was developed by adapting audio materials produced by the Gregg Division of McGraw-Hill Book Company to a new machine technology produced by Electronic Futures, Inc.

Later machine technology used was in the handmade, prototype stage and not available commercially. It was designed by Educating Systems, Inc., which is jointly owned by Sylvania, International Correspondence Schools and TutorTape Laboratories. This machine system is tape-based and was created to have a four-channel simultaneous playback capability.

An additional feature of the Educating machine system is the capability for FM radio broadcasts. Simultaneous, four-channel transmissions can be made on FM radio sub-carriers at the same time the FM station carries its regular commercial programming. This means that a simple transistorized receiver having four channel selectors for the FM signals could provide the trainees with precisely the same instructional programming that he presently gets in the NAM pilot training courses. The use of such techniques could, of course, lead to remarkable cost reductions by making such a training curriculum available to a very large number of trainees.

The cost of the NAM pilot on the tape machines is estimated to be about \$8 per week per student, including books, equipment rental and supplies.

Chemical Bank New York Trust Company is now using the NAM typing program with proven success, according to Harvey A. Basham, Jr., Chemical's senior vice-president in charge of the personnel division.

Ten girls began the Chemical Bank class six weeks ago typing at an average speed of 18 words per minute with an extremely high error rate. Three could not type at all. Since then, four have already brought their speed up to 40 words per minute and obtained jobs. The others type at an average speed of 35 words per minute with few mistakes.

NAM obtained similar results while developing the MIND prototypes program.

## Our editors get a little flustered

But usually their calm professionalism is the one ingredient that helps you meet your deadline. ■ The editorial department is there to *help* you get your film to the lab as quickly as possible. Our staff editors can creatively cut your entire show or match what you've done. They can select and edit music and sound effects, choose and direct narrators . . . in other words, do *everything* to put your film together before it leaves the camera. ■ Or if you have your own editor, he can rent one of our fully equipped editorial rooms. ■ Try working with our editorial professionals; they don't get flustered very often.

## Careers in Chemical Industry

### Pictured in New Goodrich Film

☆ The fifth in a continuing series of sponsored motion pictures directed to teen-age viewers in schools and youth groups has been released by The B. F. Goodrich Company through its national distributor: Sterling Movies, Inc.

Joining the Goodrich "Tommy" film program is a 26-minute 16-mm color film titled, *Tommy Looks at Careers-Chemistry*. It was produced by Atlas Film Corporation in cooperation with the Manufacturing Chemists' Association, Inc. The new picture explores the challenges, rewards and adventures that await today's students in the rapidly-advancing world of chemical research and manufacture.

### Many Opportunities in Field

Visits to six industrial plants and laboratories by a young featured player, focus dramatic detail on occupations which range from basic and applied research and chemical engineering to plant supervision, operations, marketing, technical writing, management and teaching. Animation sequences show advanced concepts on the structure of the carbon atom and the chemical reactions that produce vinyl chloride.

A highlight of the film is an interview with scientist Dr. Waldo L. Semon, who discusses the development of plastics. The film is ap-

Dr. Waldo L. Semon, one of world's leading rubber scientists, tells teenager Tommy Johnson, "if I had one wish today, I would want to be a young chemist again, so that I could participate in the great discoveries which still lie ahead."

propriate for social studies' career guidance classes and for general science and chemistry groups on the secondary school level.

### How to Borrow This Film

A 13½ minute version of this film is also available for public service use by TV stations. Both versions are available from Sterling Movies, Inc., 43 W. 61st St., New York 22, N. Y. and the distributor's regional libraries.

## Travel Fashions Set to Rhythms

### of Spain in a J. C. Penney Film

☆ *One Peseta, Two Peseta* is a film highlighting some of the most colorful and interesting sights in Spain today, is now available for free-loan use to TV stations, junior and senior high schools, community organizations, preschool and minute color film is presented by J. C. Penney Company and distributed by Association Film, Inc. It was produced by Show Associates, New York.

*One Peseta, Two Peseta* features two models who take off to Spain to make a film. Sporting a variety of travel fashions, they travel from Aragon to Seville and find themselves caught up in the exciting rhythm of Spanish life.

# VAN PRAAG INDUSTRIALS GET "ACTI-MOTION"

## DETROIT:

VAN PRAAG PRODUCTIONS, INC. took its hot new 'octi-motive' camera to the rugged peaks of north Michigan's ski country last winter and scored another rousing industrial "first."

Shooting reels of footage among the thrill-and-spill enthusiasts, Von Praag's TOM SMART demonstrated that 'octi-motion' gives film directors, at last, a technique for bringing home smooth high-action closeups of heretofore "impossible" outdoor shots.

Tom (now Vice-President of Midwest operations for Von Praag) is ready to demonstrate 'octi-motion' in any combination of industrial uses — for *Displays, Shows, Sales Presentations, Training Films, and Documentaries*. And while he's at it, he'll be ready to show you our *Slidefilm, Stop Motion and Animatic* techniques.

"Polaroid"® and "PolaLine"®

## In about four minutes, you can put on a good slide show.

Here's all you do to get a line copy slide:

Click the shutter.  
Pull the tab.

Wait 10 seconds.

And peel off a fully developed transparency. (Polaroid's PolaLine Type 146-L transparency film is what does it.)

Now dip it into a quick-drying

hardening solution (which comes in a pocket-sized plastic container).

Pop it into a snap-together plastic frame.

Slip it into any standard lantern slide projector.

And the show is on.

For continuous tone subjects, use Polaroid Land Projection Film, Type 46-L. Just click, pull and wait two minutes.

(Elapsed time from click to show—about 4 minutes.)

Both Polaroid films give you bright, sharp, grain-free pictures.

At about  $\frac{1}{3}$  the cost of conventional 3 1/4" x 4" slides.

So even if saving time means nothing to you, saving money might.

Polaroid Corporation, Cambridge, Mass.

Emily Jones, administrative director of Educational Film Library Association, receives a token "S-Ball Award" from William J. Speed, Los Angeles' Public Library. Award commemorated her labors on eight American Film Festivals sponsored by the film library association.

**M**EMBERS AND FRIENDS of the Educational Film Library Association, representing educators in charge of school, library and community film service film collections throughout the U. S. gathered at New York's Biltmore Hotel on May 11-14 for their annual American Film Festival. The five-day event included film screenings for award nomination panel discussions, climaxed by annual awards banquet held on Friday evening, May 13.

Blue Ribbon Awards were presented on the occasion to 40 motion pictures and 12 filmstrips, deemed most suitable for educational showings, from among the 400 entries sub-

## BLUE RIBBON FILMS & FILMSTRIPS

### Library Association Holds 8th American Film Festival

mitted. Over 800 jurors took part in preliminary and finalist screenings. Each panel of jurors was composed of authorities in (1) the subject area of each of the 34 festival categories; (2) film production techniques; and (3) the utilization of films.

Sponsors and producers attended this year's screenings in greater numbers, according to EFLA spokesmen, and were also represented during the panel presentations. Business-oriented categories, it was noted, consistently played to over-flow attendance at the various screening rooms.

The association represents school, university and public libraries among its members. Some 1,200 persons attended the daily sessions, the special evening presentation of the "Film as Art" entries and the Blue Ribbon Award Banquet. A complete resume of this year's Festival winners follows:

# Change films in 2 seconds flat!

Read how Fairchild's amazing new MoviePak cartridge multiplies the value of your entire sound film program

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play. In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training classes. In the boardroom. To switch instantly to another film, just snap out one cartridge, snap in another.

Every film you have can be easily converted to 8mm and threaded into the MoviePak cartridge. Duplicate prints are less expensive than 16mm, too. Now you can unleash the full power of your entire sound film program.

The Fairchild Mark IV projector is portable, weighs only 20 pounds and is always ready for action. No warm-up time required.

For display use, it will run without supervision, repeating automatically. It takes up to 22 minutes of film with a single MoviePak.

To see for yourself, just send in the coupon.

# Getting all the action!

## the new ultra-compact CM16 sound camera

Beckman & Whitley's CM16 is the camera for the pro on the go. 15 pounds light with zoom lens and 400 feet of film, it's slim and compact to move as fast as the action. Yet, built into this small package is a combination of performance advantages available for the first time in a professional 16mm sound camera. For example: both single and double system sound capability □ new wide open reflex viewing and focusing □ new pin registered continuous moving film for superb sound and picture quality □ new close-up quiet □ new versatile power pack for operation on any 50 or 60 cycle source from 110 to 220V without changing motors or gears.

Built by the largest, most experienced manufacturer of ultra high speed cameras, the CM16 has been field tested for over two years by top pros. To find out more about CM16 (the action camera) write or phone:

# Winners of National Safety Film Awards

National Committee on Films for Safety Honors 21 Motion Pictures, Slidefilms, and Television Spots with Bronze Plaque and Merit Awards for Contribution to Fields of Safety Education

ROLE OF AUDIOVISUALS in helping stem the awesome tide of deaths and injuries by avoidable accidents on the nation's highways, in plants and offices and at home is brought into sharp focus this year as the National Committee on Films for Safety announces the selection of nine factual motion pictures and one television film spot as outstanding safety films for 1965.

In addition to the motion pictures, two sound slidefilms and two short public service television spots are given Certificates of Merit by this national group of judges, representing labor organizations directly concerned with safety education. W. L. Robinson, associate director of the traffic engineering and transportation department, American Automobile Association, is chairman of the Committee. William W. Anderson, director of posters for the National Safety Council, is its secretary.

The annual awards recognize outstanding films in four principal categories of safety education: traffic and transportation; occupational safety; general safety; and home safety. The committee also reviews entries of television spots and spots as well as theatrical subjects.

Entries are first screened by subject specialists in relevant categories and final selection is made by members of the full committee, who are directly concerned with this problem and concern for safety education. Bronze plaques, symbolizing the highest honor given in the annual competition, and the merit awards, presented during the National Safety Conference held in Chicago in the fall period. All winning awards were made in the 23rd National Safety Film Contest:

## TRAFFIC AND TRANSPORTATION FILMS

### BRONZE PLAQUE AWARDS

#### "Love That Car"

Sponsor: American Oil Company  
 Producer: Parthenon Pictures  
 Pointed humorous incidents present the common faults of negligent drivers . . . such as poor maintenance that can lead to the dangerous conditions causing accidents.

\* \* \*

#### "The National Driver's Test"

Sponsor: The Shell Oil Company  
 Producer: CBC (Television) News  
 10-minute question and answer quiz to test driver reaction and perception of traffic situations that can lead to accidents.

\* \* \*

#### "Winter Truck Driving"

Sponsored and produced by the U. S. Bureau of Public Roads  
 11-minute instructional motion picture to

remind professional truck drivers of special safe driving practices on ice and snow.

\* \* \*

### CERTIFICATE OF MERIT AWARD

#### "We Drivers"

Sponsor: General Motors Corporation  
 Producer: The Jam Handy Organization, Inc.

A 13-minute color motion picture that entirely updates a famed picture of same title to offer tips in avoiding potential hazards to safe driving; especially useful to classes and individuals taking driver education.

## OCCUPATIONAL SAFETY PICTURES

### BRONZE PLAQUE AWARDS

#### "The Chokerman"

Sponsor: The Northwest Forest Industry Film Committee  
 Producer: Rarig's Inc.

The mission of this 11-minute color film is to instruct loggers in safe choker methods — so that, in planning the job, preparation can be made to get out of the line of danger quickly if something goes wrong.

\* \* \*

#### "Everything to Lose"

Sponsor: The Caterpillar Tractor Company  
 Producer: Calvin Productions, Inc.

This 21-minute color film dramatizes the consequences of "chance-taking" in shop work.

\* \* \*

#### "The Return of Milton Whitty"

Sponsor: Ontario Construction Safety Assn.  
 Producer: Westminster Films Ltd.

A 17-minute color film that highlights unsafe practices and working conditions around building construction sites.

"Everything to Lose" (occupational safety plaque winner) shows the terrible consequences that can follow when safety rules in the shop are ignored.

A scene from "The National Driver's Test"

## Death Points the Finger

Death and injuries mount along the nation's streets and highways and the unerring finger of statistics points straight toward those real culprits: careless, unskilled drivers who lack proper training.

Those who sponsor or create the powerful, motivating and teaching medium that is today's best weapon against driver ignorance—sound motion pictures—can well re-examine our consciences. Have we helped write the epitaphs of the 48,500 who died in traffic last year by failing to produce enough good pictures, by failing to provide enough prints to reach all who should be exposed to this medium?

Whatever happened to slow the output of such highly-stimulating films as "Miracle in Paradise Valley" or "Day in Court" or "The Case of Officer Hallibrand" to name a few? We possess a medium which can get inside the hearts and minds of those who drive. When did you last see such a film on television, in your neighborhood theater? When did you attend a community course in driver safety?

Tribute should be paid to the all-too-few enlightened companies and groups who have made safety education films available; the programs of American Oil, General Motors, Ford, Nationwide Insurance and the National Safety Council are notable contributions.

This is a costly business. Traffic accidents not only cost lives but involve property, insurance costs, work time lost and the grief and suffering of loved ones. A waste that is so clearly defined by human neglect can only be corrected by greater human effort in education.

"Love That Car" (traffic plaque winner) points up importance of proper car care for safer driving.

A scene from "The National Driver's Test" as car leaves highway in tumbling crash.

## A SENATOR'S TRIBUTE

Mr. President:

☆ The night before last 30 million Americans took a drivers' test. Hopefully, the rest of the nation did better than the 2,000 drivers in New York, Philadelphia, Chicago and Los Angeles whose test scores are known. Only four per cent of the test drivers in those four cities received scores in the "excellent" category. Forty-two per cent failed.

We owe a real debt of gratitude to the Columbia Broadcasting System for bringing the traffic safety problem into our homes. Monday night's CBS News report will stand as a landmark in television news reporting and public service. I hope that CBS' *National Drivers Test* can be repeated on an annual basis because it serves as a deadly reminder to us that there is room for tremendous improvement in the driving skills of the American people.

The Shell Oil Company, in sponsoring this program, showed managerial courage and enlightenment that is too rare in our country today. For this show emphasized not the zip, the power and the getaway of today's automobile and the fuel it uses, but the awful consequences of the misuse of that vehicle by individuals. And, of course, the work of the National Safety Council, which has long advocated improved driver training programs, cannot be overlooked. •

*Text of a speech by Senator Abraham Ribicoff (Dem., Conn.) delivered before the United States Senate and inserted in the Congressional Record on Wednesday, May 26, 1965.*

## OCCUPATIONAL SAFETY PICTURES

### CERTIFICATE OF MERIT AWARDS

#### "Cowboy Kelly's Last Ride"

Sponsor: Northern Illinois Gas Company  
Producer: Cavalcade Productions, Inc.

This 16½-minute color film shows workmen the importance of checking out underground utility facilities before excavation.

\* \* \*

#### "Safety With Nets"

Sponsor: Department of the Army,  
Safety Office

Office of the Chief of Engineers  
Producer: U. S. Army Engineer Division

☆ A 12-minute color film which depicts ways of using safety nets for worker protection.

\* \* \*

#### "Shipyard Fire and Explosion Hazards"

Sponsor: U. S. Department of Labor  
Producer: U. S. Department of Agriculture,  
Office of Information, Motion Picture Service

☆ A 41-minute color picture which points up the fundamentals of recognizing common flammable liquid hazards in avoiding accidents.

### SOUND SLIDEFILM MERIT AWARDS

#### "Play It Safe"

Sponsored and produced by the  
Aetna Casualty & Surety Company

☆ This 12½-minute instructional slidefilm is for Aetna insurance clients. It emphasizes the proper use of mechanical package handling.

\* \* \*

#### "A Visit From Safe Sam"

Sponsored and produced by the  
Aetna Casualty & Surety Company

An 8¼-minute instructional slidefilm (for Aetna assureds only) that deals with safe work habits among restaurant employees.

## FILMS FOR HOME SAFETY EDUCATION

### BRONZE PLAQUE AWARDS

#### "Safety in the Home"

Produced for educational print sales  
by Encyclopaedia Britannica Films, Inc.

☆ This 11-minute film gives home accident prevention instruction to children up to junior high grade levels. (Color or black and white)

\* \* \*

#### "The Toddler's Hours of Hazard"

Sponsored and produced by the  
Aetna Life & Casualty Company

A 13½-minute color film which depicts environment factors involved in home accidents.

\* \* \*

### CERTIFICATE OF MERIT AWARDS

#### "Safe Mowing Is No Accident"

"The Snow, Snow, Snow Must Go, Go, Go"  
Sponsor: Jacobsen Manufacturing Company  
Producer: Robert M. Carson Productions

☆ These two short films cover proper use of rotary power mowers and snow removers.

### GENERAL SAFETY EDUCATION

### BRONZE PLAQUE AWARD

#### "The High Cost of Negligence"

Sponsor: The U. S. Department of the Army  
Producer: The Army Pictorial Center

☆ A 25-minute b&w motion picture which traces case histories of Army personnel involved in accidents not in "the line of duty."

\* \* \*

### CERTIFICATE OF MERIT AWARD

#### "Bad Day at Pleasant Valley"

Sponsor: California Division of Forestry  
Producer: The George Fox Corporation

☆ In this 15-minute color film the story of a disaster can strike a small forested community through its lack of preparedness is dramatically presented to help alert others.

### PUBLIC SERVICE TELEVISION FILM

### BRONZE PLAQUE AWARD

#### "Family Tree"

Sponsor: The U. S. Forest Service  
Producer: Wilding-Fedderson, Inc.

A one-minute color spot on forest fires

\* \* \*

### CERTIFICATE OF MERIT AWARDS

#### "Be Safe, Ski Wise"

Sponsor: The National Ski Patrol System  
Producer: IPI Films

A 4½-minute short subject on ski safety

\* \* \*

#### "Tailgating—Invitation to Tragedy"

Sponsor: The Reader's Digest Association  
Producer: Vavin, Inc.

This 3¼-minute television film points out bad practice that causes injury and death.

## Outstanding Traffic Safety Films Currently Available

**WORTHY OF NOTE** are other current and outstanding traffic safety films, including winners of National Safety Film Contests. Available from their sponsors or local film distributors are such titles as:

**Why of an Accident**, 26½ min., color. Produced by Jerry Fairbanks Productions for the Bell System and available from local Bell film libraries. This 1962 award-winning film shows how a family in result if safe driving practices related to the job are ignored in the family car from work.

**It's Too Late**, 13½ min., color. Produced by Audio Productions, Inc. for the Bell System and available from local Bell film libraries. The value of seat belts is emphasized through statistics and a personal testimonial from actor Vic Dyke, who found that belts can save lives. Winner of a 1965 National Safety Film Contest.

**In Court**, 30 min. Sponsored by International Harvester Company and distributed by American Films and Modern Talking Picture Company.

Award-winning story about the problem of drunk driving accidents. It dramatically reveals causes of accidents and presents an effective way to reduce them.

**Dead Hall Story**, 25 min., color. Sponsored by Employers Mutuals of Wausau and distributed by American Films and Modern Talking Picture Company.

A 1964 plaque award-winner tells the story of America's Handicapped Man of the Year as he tells the car accident that crippled him for life. It has been widely circulated; has an unforgettably forceful safety message.

**Invisible Killer**, 15 min., color. Sponsored by Automotive Exhaust Research Institute and distributed by Sterling Movies USA.

Explains the reasons behind a disastrous car crash in which no apparent reason can be determined. The reporter in this drama makes a thorough investigation — and a discovery.

**Silent Witness**, 28 min. Produced by Dynamic Films, Inc. for the Wm. S. Merrell Company.

This 1961 plaque award-winner presents a case study of the use of intoxication tests in traffic accidents. It is especially important for its medical and legal aspects of this frequent cause of tragic accidents.

**Drivers**, 13 min., color. Produced by The Handy Organization for General Motors. This completely new version of an often-used safety education film has special appeal for young drivers-to-be at whom it is aimed.

**What You Do If . . . ?**, 12 min., b&w. Produced for outright print sale by Parthenon Pictures.

This short film won a 1965 National Safety Film Contest plaque for its terse, highly useful presentation of emergency driving situations and the proper warnings, especially for teenagers, of potential hazards. See front cover — center scene of this award-winning motion picture.

Any voluntary local group whose membership includes licensed private motorists who want to improve their driving skills can now benefit from the National Safety Council's "Driver Improvement Program" which provides a standardized eight-session (each of an hour's duration) course of study. The program is being offered nationally by the Council through cooperating agencies, group sponsors and a corps of approved instructors. Films, visual aids (such as flannel-board cards and flip charts), booklets and manuals are an integral part of this well-organized effort.

## Safety Education Plays Key Role in Ford's Film Program

SIX MOTION PICTURES and four sound filmstrip packets are currently helping the cause of driver education and playing key roles in the Ford Motor Company's safe driving film program. A three-film series: *City Driving* (22 min.); *Highway Driving* (17 min.); and *Driving Under Special Conditions* (19 min.) are basic tools for the high school driver education classroom. These black-and-white films were produced in 1960 in cooperation with the Safety Education Commission of the National Education Association and revised versions are already under way. An eight-minute picture, *The Smith System of No-Accident Driving* (updated in 1962), demonstrates the five "seeing" habits developed and taught by Harold Smith, a professional driving instructor.

Two other films, *The Automobile Engine* (20 min.) and *So You Want to Buy a Good Used Car*, have safety education overtones in helping the young driver to understand the vehicle. The four low-cost sound filmstrip packets include: *Freeway Maneuvers* (four titles); *Passing Series* (five titles); *Intersection Series* (five titles); and *Seeing Habits for Expert Driving* (single unit). These are basic teacher aids.

### 186,566 Group Showings of Six Films

There were 1,947 prints of the six current Ford-sponsored motion pictures in use last year and a total of 186,566 group showings to a total audience of 8,792,656 was reported. In addition, these six films were televised 33 times to an unestimated additional audience. Five older safety films, retired from the company's regular library, continued to find usefulness in the hands of purchasers and extended loan depositories: In 1965, some 977 prints of these films accounted for 24,382 group showings to 1,272,424 viewers.

Ford is about to release a new, nine-min-

ute color film, *Three Steps to Safe Driving*, which demonstrates the habits that all good drivers have in common and is based on test results with a Drivometer (an electro-mechanical device for recording steering wheel movements, use of the brake and accelerator pedal). It is aimed at drivers of all ages and experience.

### 100 Million Have Seen Safety Pictures

During the past 15 years, 19 motion pictures on driving and various aspects of highway safety have been produced and circulated through the Ford Film Libraries. These films have accumulated a total audience of more than 100 million viewers in nearly 2 million group showings. In addition, they have been telecast 4,000 times. A considerably expanded highway safety film program is under way.

### Low-Cost Package of Driver Education

#### Films Made Available by American Oil

The American Oil Company has made available to driver education classes in the nation's schools a series of eight 4½-minute instructional films produced in cooperation with the National Commission on Safety Education of the National Education Association. Produced by Parthenon Pictures, the library of short films is sold at cost. The complete package includes eight silent films (in either 8mm or 16mm), a teacher's guide and a supply of student booklets.

The films deal with such situations as how to cope with driving emergencies, the technique of driving on freeways, action of the brakes and power train, and the physical forces and laws involved in car operation. More than 1,000 high schools throughout the U. S. have already acquired these useful packages.

"Safety Belt for Susie" is encouraging youngsters to fasten seat belts. Winner of numerous awards, film is available in several languages.

"Red Light Return" uses recent UCLA collision tests to show effects of impact on windshield glass, various types of seat belts and latches.

## Helping Reduce Accident Toll is My Concern

Commentary by Charles H. Cahill, Charles Cahill & Associates, Inc.

**T**HE CURRENT OFFICIAL FUROR over automobile safety will undoubtedly have positive results, and safer cars will be developed; but it is a mistake to draw attention too far from that all-important guidance and control mechanism that car manufacturers have nothing to do with — I mean the driver.

The difference between a poor driver, whose accident potential is high, and a good driver with low-accident potential, is usually good training.

A few years ago we became so interested in driver training films that we turned from the production of industrial motion pictures and TV material to concentrate on the training and safety education field.

### Two Films Based on Auto Collision Studies

In 1957 we received an assignment from UCLA's Institute of Transportation and Traffic Engineering to produce two films: *Impact* and *Safety Through Seat Belts*. Both were based on ITTE's famed auto collision studies.

When we realized how a filmed story on accident impact forces, natural laws at work in collisions, and such factors as human perception and reaction times could help change viewers' driving habits, we began to devote more and more of our attention to this field. Since then we have branched into other types of training subjects as well as curriculum school

films, but driving and related safety problems remain the prime concerns.

During the course of making 18 driving safety pictures, we have worked with such authorities as Derwyn Severy and Ted Brink of UCLA's ITTE; A. L. Mosely of Harvard Medical School; the U. S. Public Health Service; the California Highway Patrol; the Chicago Police Department; Northwestern University, and men like Howard Pyle and Alfred Finch of the National Safety Council.

### Poor Driving Caused Most of the Accidents

Through such experts we have been able to learn much that has helped us in the driver education field. If we look at accident statistics, we must still conclude that poor driving is at fault more often than the faulty manufacture or assembly of cars. With the increase of power and speed — and with the constantly increasing number of cars and drivers — it is amazing that the accident rate is as low as it is.

Perhaps much of this can be attributed to the increased use of intensive driver training programs in large fleet operations, with particular reference to utilities like the telephone companies and the armed forces.

There is no doubt that such large-scale educational efforts pay for themselves in the minimizing of wear and tear on rolling stock

alone. As driver training of teenage vehicle operators increases throughout the country and this trained generation takes over behind the wheel in America, perhaps the wear and tear on cars, passengers and drivers will also show a marked decrease. Many adults on the road today learned to drive, as the saying used to be, by "main strength and awkwardness." But if driver training in schools and industry continues at the current rate, it will not be many more years before virtually all drivers will be trained drivers.

### Films Must Hold the Viewer's Attention

Motion pictures are a vital part of driver education programs at any level, and we think

Helicopter drop of 68 feet approximates forces involved in a 10 MPH collision.

it is particularly important that they hold the viewer's attention effectively so that instructional factors can be retained. We always try to refrain from too much "generality," and we introduce memorable devices — "gimmicks" if you will — that help to combine entertainment with education so that the instructional essence of the film can be painlessly assimilated by the viewer.

Our eighteen current titles include *Broken Glass*, made with UCLA, and a classic in its field; also made with UCLA were *Fatal Meeting*, *Safety Belt for Susie*, *Red Light Return*, and *Safe on Impact* (the story of automobile safety glass).

In 1963 we were recognized by CINE, the Council on International Nontheatrical Events, which awarded a "Golden Eagle" to our film *Safety Belt for Susie*. This month we were pleased to receive word that *Red Light Return*, one of our most recently-produced films, has brought us our second "Golden Eagle."

At present we are at work on three films, including *Space Driver*, on the importance of maintaining driving space, and an untitled film utilizing the spectacular collisions staged by Derwyn Severy's ITTE group involving school buses and passenger cars.

After nearly nine years' experience with this absorbing subject, we are more than ever convinced that real automotive safety lies in "reel" driver training — that driver training programs can do a better job of education when they are based on the use of effective driver training motion pictures.

At the right: in the production of "L. V. O. C." a special camera rig was devised to visualize steering position in relation to skid forces. (Scene at top of front cover is from the film.) Below: anthropometric dummies are the drivers and passengers in the automobiles used by the University of California to study the impact forces involved in various types of collisions.

MEMBERS WHO DIRECT programs and projects for audiovisual communication among many of the nation's largest companies. Members of the Industrial Audio-Visual Association, held their annual meeting May 2-5 at the Sheraton-Chare Motor Hotel near Chicago. "Both Sides of the Coin" was the theme which guided three days of discussion and demonstration as these professional audiovisual executives examined the management and technical aspects of their work.

Lawrence B. Warnock, president-elect of IAVA, took up this theme in his acceptance address. He challenged his fellow members to "prove to our management and to the business community that we can and will develop and exercise our skills on both sides of the coin." Warnock, promotion manager for the Link-Belt company in Chicago. He succeeded Harold Daffer, staff film producer at Honeywell, Inc., as president of the association.

**"The Collapse of Time"**  
In his keynote talk on May 3, management consultant J. Lewis Powell told the association that the man's yardsticks of progress that speed he can travel. "From the year 1900 to 1945, that speed increased to 600 miles per hour. In 1945, the world turned a corner and it hasn't been the same since. Now speeds of 25,000 miles per hour are common." Powell's point of course, was that because of this acceleration of change, yesterday's solutions are no longer applicable to today's problems. The communication of these changes, Powell concluded, is the primary concern of these IAVA members.

Evid H. Curl, of the Industrial Relations Center at the University of Chicago, took up the question "A-V: Profession or Trade?" He compared the A-V executive to professionals in other fields and sought criteria to assure their status as such. The session drew a controversial comment on terms which describe the role of the audiovisual manager. Dr.

Members of the Industrial Audio-Visual Association during a typical session at the annual meeting in Chicago.

## Industrial A-V Executives Hold Annual Meeting

Members of Industrial Audio-Visual Association Look to "Both Sides of the Coin" as Meeting Theme Examines Management and Technical Aspects of AV Communication

President-elect Lawrence Warnock based his acceptance address on "the role of the communicator."

John W. Taylor, head of Chicago's two educational television stations, WTTW and WXXW, was the honored guest speaker at the annual banquet program.

### Revolution in Education

"Audio-visual methods of instruction may soon prove to be the only practical means for mass education," he said. "The entire teaching profession is undergoing a radical revolution, from the methods in use since the schools of ancient Greece to the ones that are needed today." Don Glasell, IAVA's program director for the

spring meeting (Montgomery Ward & Co.), presented Dr. Taylor with a modest contribution to help speed the work of educational tv. in Chicago during the banquet program.

The technical "side of the coin" was examined in several program events. Adam Kozma, co-developer of the new three-dimensional laser-beam photographic process at the University of Michigan, discussed and demonstrated that innovation. Dr. Hilda Fisher, of the Speech Department, Northwestern

Dr. Hilda Fisher, chairman of the Speech Correction Department at Northwestern University, at mike.

Social respite from busy program schedule: members and wives gathered in King's Court for president's reception which preceded annual banquet.

University, explored the use of the human voice as a communications tool. She gave the general capabilities of voices, told how to judge the voice for communications' effectiveness and described the

Keynote speaker J. Lewis Powell was animated and persuasive as he spoke on "The Collapse of Time"

speech therapists' growing use of audiovisual materials.

### New Product Demonstrations

At other technical sessions, demonstrations of the latest Ampex videotape recording equipment, of General Electric's inexpensive "Phono-Viewer" and a review of progress in 8mm projection shared the podium with programmed

**IAVA officers-elect** front row, l to r: Fred Woldt, exec. secty., Lawrence Warnock, president, J. T. Hawkinson, v.p. Ill.; Frank Stedronsky, secty. Center row: Gerry Hall, membership dir., G. L. Johnson, spring meeting dir., Harold Datter, past pres., Don Benjamin, asst. secty., James Craig, historian, Martin Broadwell, so. reg. director; Ken Morton, fall meeting dir. Top row, R. D. Fuller, no. reg. director, Jerry Cinto, tech. dir., Robert Doyle, central reg. director, Jack Hanson, publ. dir., William Walton, east reg. director, and Herbert McCutney, project chairman.

Walton, IBM, taking up various aspects of this key subject.

Johnson's role as a panelist was to discuss the subject "The Profile of an Audio-Visual Man." He was followed by Bill Buch's presentation on "Do You Know Your Company." William Walton's panel topic, which he visualized, was "Relating the Success Story to Management" and Don Benjamin, panel chairman, discussed the meaning of "Success" in the administration of corporate audio-visual programs.

Norman Salmons, manager of A-V Service at the Eastman Ko-

Past president Harold Daff, Homquell, Inc., finds a Unit A Lines' exhibit most absorbing.

"Communication, an Idea in Three Dimensions" was presented by Eastman Kodak's Norman Salmons, manager, a-v service. This wide-screen presentation employed motion pictures and slides to deal with new systems for microfilming literature, records, etc. Will delivery systems of future employ laser when modulation of beam has been conquered? A prophetic highlight.

dak Company, Rochester, N.Y., presented a widescreen motion picture and slide program on "Communications, an Idea in 3 Dimensions" in which he forecast the increasing role of microfilm for storage and study of literature and other corporate data.

**Introduction of New Officers**

Among the other new officers introduced to the membership at the annual meeting were first vice-president Bill Buch and a newly-appointed executive secretary, Frederick J. Woldt, recently retired from Illinois Bell Telephone Co. Frank Stedronsky (A. B. Dick Company) continues as IAVA's secretary and John Hawkinson (Illinois Central Railroad) again serves as the Illinois vice-president.

A new slate of regional directors was also named, Bill Walton will serve in the east; R. D. Fuller, for the northern region; Bob Doyle in the central states. Martin Broadwell is southern regional director.

The fall meeting program, scheduled for Tapoco Lodge,

Tapoco, North Carolina, will be handled by Ken Morton (AOC) as chairman, G. L. Johnson named chairman for IAVA's spring meeting in 1967.

**13 New Members Join Group**

13 new members were introduced during the annual meeting. The new officers who will serve the association during the coming year are pictured in these pages.

Larry Warnock (Link Belt) introduced with Ira Thatcher (Union Air Lines) during IAVA's fall meeting at that company's headquarters.

**IAVA'S ANNUAL MEETING:**

learning devices shown and discussed by Bruce Patte of Electronic Futures, Inc. Member film showings and topical go-arounds had their usual important roles in the well-filled agenda.

**Audiovisuals Abroad, at Home**

During one of these sessions, O. H. Coelln, of BUSINESS SCREEN, discussed European film production and distribution progress, reporting on his participation as a delegate to the International Industrial Film Festival in Rouen, France last fall. An outstanding program was devoted to the panel discussion of "You, Your Job and Your Company" with members Don Benjamin, Columbia Gas; G. L. Johnson, Panhandle Eastern Pipeline Co.; William H. Buch, Lederle Laboratories; and William

Dr. John W. Taylor, executive director of WITW WAAW, spoke of the growing needs of educational tv.

New members at Chicago (front row, l to r): Fred Barker, Calif. Packing, C. J. Connolly, B. J. Goodrich, C. P. Rice, Jr., Norton, Ronald Dice, Mead Container. 2nd row: J. R. Maud, Goodhear, Marshall Wayne, Armani, Richard Joy Burroughs, J. D. Bergman, Homquell, Richard Lichtenwalter, Penn P & L. Top row, J. L. Armstrong, Boeing, Harry Pancy, Athan Anderson, J. T. # IAVA VISITS UNITED AIR LINES "BLUE ROOM"

A well-conducted tour of United Air Lines' administrative complex, stewardess' school and Flight Planning Center near Chicago's O'Hare Field, gave members of the Industrial Audio-Visual Association an insight into modern communications at work. Member Ira Thatcher, of United's San Francisco-based staff, was the host for this tour event.

IAVA members arriving at United's executive offices, near O'Hare Field. They visited photo lab, stewardess' school and flight planning center.

At right: a graceful United Air Lines' DC-8 makes its final approach to Chicago's O'Hare Field, passing over IAVA members during the association's tour of the airline's headquarters facility.

At left: although training films are produced elsewhere, United maintains a well-equipped still photographic facility in the executive complex.

Below: United's Flight Planning Center, master console is in foreground. Reports from air terminals and depots across U.S. are shown each a.m.

Below: United's room with an 18,000 mile view of the center for flight planning. Management meets here each morning to review that past mileage of past 24 hours. The map outlines the company's 18,000 mile system. The center originated at the suggestion of the company's board chairman.

## Color & Glamour at a Fashion Awards Show

Film Widens Audience for Coty's "American Fashions" Program

**T**HE COTY American Fashion Critics Awards, established 23 years ago by the French perfume and cosmetic house, to honor and encourage American designers, is the most coveted prize in the fashion field. Winners are chosen each year by a jury of 60 top-ranking magazine and newspaper fashion editors, and the awards are made at the Metropolitan Museum of Art before a select but limited audience of exactly 703 fashion experts.

In an effort to broaden this audience in the past few years Coty has traveled the show—always the most elaborately staged fashion show in the United States—to four other cities, but at great, and mounting expense.

### Captures Excitement of Show

This year, for the first time, the fashion spectacle has been put on film with all the color and excitement of the original performance. Filmed as an on-the-spot documentary by Aegis Productions, Inc., New York, *The Coty American Fashion Critics' Awards* goes behind the scenes to show the two days of frantic preparation that go into producing this one night of glamour and glitter.

Gowns, shoes, jewelry, furs and hats arrive at the Museum and final selections are made. Models dress and undress. Hair is teased into gravity-defying molds. Fashion editors, designers, lighting technicians work around the clock in organized confusion. The air crackles with tension as everyone strives for perfection. In just two days the most significant fashion show of the year must be whipped into shape.

As the lights dim, the show gets under way with a close-up view of

high fashion that the public never sees. Against a background of "living scenery", provided by the Alwin Nikolais dancers, the film offers a fresh approach to the presentation of sparkingly original clothes by nine young designers, together with the work of such fashion greats as Norell, Trigere, Zuckerman, Galanos, and others.

### Used High-Speed Ektachrome

Producer Sid Milstein, working quietly and unobtrusively backstage with High-Speed Ektachrome and wide-open lenses, actually came up with almost three hours of exciting footage shot during the two 18-hour days of rehearsal. This has been edited into a 20-minute motion picture which has snowballed into one of the most popular films on the fashion scene in many years.

Previewed during American Designers Week on a snowy morning in January while New York was still gripped with a transit strike, the film drew a capacity audience, and within minutes it had been booked into such prestige locations as Saks Fifth Avenue (before 600 employees), the Gimbel's auditorium (where it played to public audiences every day for a month), and similar large stores across the country.

### Praised by Fashion Experts

Such fashion experts as Eugenia Sheppard, of the New York Herald Tribune, called it "a stunning film"; Juliette Reed, of the School of Fine Arts, Washington University, said it was "an inspiration... the best movie of its kind I've ever seen"; while Women's Wear Daily labeled it "absorbing, exciting."

Now available to public audiences through Sterling Movies, the

film, even though on such an easily dated subject as fashion, should have several good years of active distribution. The fashions pictured are frankly so far-out and "kooky" that they will hardly go out of fashion because they will never really be "in" in a truly wearable sense. But the design elements will undoubtedly influence women's clothing for some time to come.

### Relates Perfumes to Fashion

Another problem Coty faced up to with this film is that even after 23 years of sponsoring the Coty American Fashion Critics' Awards, not a few people in the fashion industry still wondered if "Coty" was related to Coty, the perfume. While still very soft sell, the film does identify the sponsor as the real perfume Coty. Wherever pos-

sible in public showings the company will also distribute samples of its newest scent, *Imprevu*.

In addition to general public audiences, Coty has developed such other techniques as screenings for "convention wives" women who accompany their husbands to trade conventions have their own programs during the day. Coty's trained beauty consultants are much in demand these groups to speak, demonstrate, and show the new film.

In Washington, special previews have been held, with much success, for Senators' wives and ambassadors' wives, and other distinguished groups.

Coty's film program is supervised by the company's Director of Public Relations, Janet Baird.

## The Cosmetics' Salesgirl and Her Job

Charles of the Ritz Inspires Trainees With "Gift of Beauty"

**C**HARLES OF THE RITZ, a leading cosmetics firm with outlets in major department stores across the country, brings all new retail sales trainees to New York City for a one-week course of instruction in the art of cosmetology and in the basics of selling.

Most of the women are not youngsters just out of high school or college. Many of them are returning to work after years of raising families. While the company has little trouble training them in the techniques of the job, some of the girls have a few misgivings—wonder whether they are really up to going out all on their own behind a Charles of the Ritz counter.

### A "Valedictory" to Training

To instill a brave spirit in the new graduates, and to show what the job is really like, the company is now using a new film, *The Gift of Beauty*, as a final valedictory to the training week. The 30-minute color film illustrates how other Ritz girls live and work, and shows

Counter customer: girls of this age trust their Ritz counselors.

the dignity, status and success are part of a career with Charles of the Ritz.

The highlights of the film indicate how much a part of the community these women are; the easy, friendly relationship to customers and the sincere concern. Ritz consultant develops for clientele. All of these elements were portrayed in "actuality" sequences in various locales, showing the girls in action.

### Camera Follows the Girls . . .

To achieve a film to which the women could really "relate" producer Scudder Boyd followed typical Ritz girls with camera the time they left their suburban homes through to their "on job" selling day.

This meant shooting in department stores at the Charles of the Ritz counter and recording sound with amateurs, none of whom had ever been on camera before.

Prior to undertaking production a test was proposed to see if "actuality" technique would work when Ritz girl and customer confronted by a camera.

### Senior Ritz Girls Approve!

The test was successful; women not only forgot the camera was on them, but on occasion came up with lines no script writer could have written.

The first screening was held a group of forty regional representatives of the company . . . senior Ritz girls. They knew the job the film was supposed to form, and would not hesitate

**T**he *LIGHT TOUCH*, leavened with laughs, provides a wel- come departure from traditional "hard-sell" of dealer-relations films in the Atlantic Refining Company's new 18-minute color motion picture, *The Lively New Look*, produced by Audio Productions, Inc.

Already viewed by some 10,000 Atlantic dealers in 16 states from Maine to Florida, the deft, humorous approach has evidently paid off. James Fagan, Supervisor of Motion Pictures and Displays for Atlantic Richfield, says, "it's definitely the most successful film we've ever had produced."

**Campaigns for Better Service**

The picture introduces a sales campaign built around the company's multimillion dollar sign program and features a soft-sell appeal for modern, spruced-up stations, openhanded customer service and pride in the operation among the dealers. To deliver the "message", Audio's producer-director Frank Burns teamed character actor Henry Jones and comedienne Mary Jo Catlett in a rollicking encounter between a horrible example of the outdated dealer and his unhappy customer.

After a quick montage of quick-cutting shots of the "Go-Go" aspect of today's America — frugging dancers, surfers, water and snow skiers and space walkers, racing horses and fast cars — accompanied by a rousing discotheque-style score, dealers saw Henry in his run-down, falling-apart station as he begins to break every commandment of the seller-customer relationship.

**Henry's a Horrible Example . . .**

Henry ignores the customer's needs in favor of his own — he is incompetent, gives little service and what he does give is more harmful than helpful. Meanwhile, Mary Jo, a harried-housewife-in-a-hurry, does a slow burn mindful of Edgar Kennedy. In an off-screen conversation with the narrator, Jones is sorely puzzled by the voice-over criticism of his operation.

As the disillusioned customer speeds off in a rage — sans her gas tank cap and with a grease-smear on her car (thanks to Henry's ministrations), the narrator proceeds to explain the error of his ways. Cars whiz by in speeded-up action as the narrator explains: "They're not going too fast to pull in. They just don't have a reason. And after seeing your service, I don't blame them."

The narration goes on to docu-

Perplexed Henry Jones absorbs hard facts about successful operation in a scene from Atlantic Refining Company's 18-minute dealer film.

**Atlantic's Dealers Get a "Lively New Look"**

**Saga of "Henry Jones" Uses Light Touch to Make Sales Points**

ment the increased business potential in America's expanding economy for the live-wire dealer. The promotable sales-aids introduced by Atlantic in recent years are demonstrated: Imperial gasoline, Clean Carburetor Test, Insured Starting, Clean Carburetor Club and Guarantee. Finally, the service message is delivered — in a sequence featuring a model Atlantic Red-Ball Station, spruce and crisp-looking. Its dealer, Joe Williams, demonstrates the *best* in customer service.

**Mary Jo Just Can't Believe It**

There's a happy finale as dealer-viewers return to the scene of Henry Jones' rejuvenated station. Harried housewife Mary Jo is back again, but this is definitely the "after" sequence as Jones bustles through every "perfect" service function in a series of speeded-up action scenes interspersed with close-ups of the woman customer

following his movements in awed wonder. As she pulls away, other cars roar in for service as "voice-over" winds up:

"I'll bet that she'll be back for that Red Ball service and that's what we want. It's happening all over the territory. A little thing called *"the lively, new look."* From Maine to Florida and west through Ohio, the old look is disappearing. The new Atlantic signs are going up, the company is going up, too. So come along with us, under the famous Red Ball symbol of service and the new Atlantic sign of progress into a future of ever-increasing profits."

**It's "Go Go" With Atlantic**

*The Lively New Look* closes on a montage from the opening sequences, interspersing some earlier "Go-Go" shots with scenes of cars being serviced in Atlantic stations and closing on the revolving sign the company features.

Surrealistic set for run-down service station where Henry Jones was going down-hill fast until he learned to smarten up to make sales.

# VIDEOTAPE AS A TRAINING MEDIUM

LOWER COST OF EQUIPMENT WIDENS BUSINESS USE

## Replays of Interviews Aid Sales Trainees

American Can's Future Salesmen Learn to Improve Technique

**V**IDEOTAPE "INSTANT" REPLAYS of sales trainees have proven their value in a growing number of U. S. companies. Present lower-cost video recorder-playback equipment appears to have widened use of this medium for role-playing "situation" tapes which enable future salesmen to "see themselves as others see them" and to improve both physical appearance and technique.

The American Can Company's Personnel and Industrial Relations Department as well as Canco's Sales Department are advocates of this approach. For instance, trainees for sales posts are informed their "sales interview" performances will be videotaped and are given the opportunity to study the results. After trainees have seen their performances, instructors from departments involved and "buyers" who appear in tapes are asked to study the material and to provide formal critiques.

In a final session, videotapes of all trainees are shown for review by the entire group.

"We've been more than pleased with the results," says Robert S. Shrewsbury, manager of the company's Organization Development & Planning Group. "Our sales trainees are their own harshest

critics when they see tapes replayed. They instantly spot where the interview was weakest, how they might have used a more effective approach . . . even how they should have worn a different tie for the occasion."

American Can is using the Sony Videocorder, a 75-pound unit which provides a full hour of tape presentation, plus replays. This setup is accompanied by a small, 10-pound camera and a 40-pound monitor. Its total cost is under \$1,500.

According to Shrewsbury, American Can has had the videotape units in operation since last December and the company feels that it has already paid its way. "We plan extensive use of videotapes for any of the many training techniques which involving, post-appraisal discussions, and other face-to-face situations," he concludes.

The company also plans to set up a network of videotape equipment throughout its 139 plants and office facilities. With such a network, spokesman points out that it would be a simple matter to tape a major policy decision at the company's New York headquarters and to send duplicate tapes throughout the country for instant replay.

Eastern Airlines' personnel are making videotapes of jet equipment to shown throughout its system for training of maintenance and flight operations personnel. Training system was installed by the Ampex Corporation.

## A Videotape System for Airline Maintenance

\$100,000 Ampex Installation to Serve Eastern Airlines Base

**T**ECHNICAL TRAINING of maintenance and flight operations personnel throughout Eastern Airlines' system will be facilitated by that company's recent purchase of a \$400,000 television training system. A completely outfitted master studio for the production of videotape training material has been set up at Eastern's maintenance and operations headquarters in Miami. Other major Eastern bases at Atlanta, Boston and J. F. Kennedy International Airport, New York, are being equipped with Ampex video camera/recorder units and all of the airline's 25 maintenance stations are getting videotape reproducers and monitors for playback.

### Medium Is Flexible, Fast

Both Eastern and Ampex describe the system as one of the most advanced in industry. It will rely heavily on videotape recording as a primary means of bringing detailed instruction to widely separated locations. The instantaneous erase-replace capability of magnetic tape gives the system the flexibility needed for this application. Sound-picture training tapes can be made and distributed quickly, and kept current with a minimum of cost and time.

Eastern will begin use of the new system with training materials on its new DC-9 twin-jet aircraft. Twenty-four of the new jets will be delivered early this year. The system will also help train personnel on the advanced DC-8 Model

61 jets and Boeing 727 "Quiet Change" "Whisperjets" which Eastern also has on order. Later tapes will be made to do recurrent training on other aircraft already in the fleet.

### Leasing of Tapes Planned

Eastern also plans to lease training tapes to other operators of similar aircraft and to make tapes for other companies on a contract basis.

Improved quality of training, the principal advantage Eastern expects from the new system. In addition, the airline will be able to train a larger number of employees in a shorter period of time; bring graphic demonstrations of highly technical mechanical operating functions into the classroom; and build an always-current standard training library.

### Will Produce at Four Bases

Training tapes can be made at the company's Miami headquarters and at the Atlanta, Boston and New York bases as well. Film preparation and editing will be accomplished in the Miami master studio for rapid distribution of tapes to all field maintenance stations for monitor viewing in training sessions.

Studio equipment in Miami will include a studio-size broadcast video recorder and electronic editor, time-lapse closed circuit cameras, a portable recorder, film chain, and associated equipment.

Part 1 of a continuing series.

American Can Company sales trainee's mock interview is being videotaped for later review and study of his technique. Fixed TV camera (right) serves the Sony Videocorder (background) with its built-in small monitor and also delivers taped images to larger 21-inch monitor (left) used for the playback.

TO MANY PEOPLE the computer is an arcane phenomenon of our times—a fascinating and mysterious product that in some undefined way seems to diminish the value of humanity. As the prime symbol of our technologically advanced society, the computer also attracts all the true anxieties and fears of people who are disturbed not only that “the old order changeth” but that it “changeth” at a pace bewilderingly fast. Tomorrow is here today while yesterday is faded almost beyond memory.

Whether or not the apprehension with which progress is viewed is warranted may well be the subject of a critical analysis of the social-psychological climate. After seeing *Small Miracle*, however, it is clear that the computer (and the term is used to include all related electronic data processing devices) lies at the heart of the modern world. It contains in its fabulous circuitry the key to the future, and that far more important than what it works is what it does.

### The Computer: a Fact of Life Today

The computer is, in short, a fact of life as we know it today—a fact to be known, appreciated, and understood.

*Small Miracle* is a 16mm, 13-minute color film about this fact. Produced for the International Business Machines Corporation by Henry Ratas & Co. of New York, the film concerns itself not only with a machine but with the context in which it functions. Civil engineers building a highway, a shoe retailer controlling inventory, airline pilots, manufacturers, medical researchers, school children, electrical engineers—these are just some of the people to whom the computer has become as everyday as pencil and paper. From the romance of space to the mundane business of business, the computer is seen for what it is: nothing more than a tool; nothing less than an extension of our limited senses and capabilities.

### Documents the Hopes of Its Creators

*Small Miracle*, though, is more than a promotional paean to the efficacy of electronics. The increasing sophistication of sponsored films is nowhere better evidenced than in this relatively brief cinematic experience.

By documenting the function of the computer, *Small Miracle* at the same time documents the ambitions, the hopes, the needs of its creators. As the narrator says at the very beginning of the film, “What is a universe? . . . To man the universe is an endless voyage. . . . We are a race of seekers. We unlock one secret and find ten others. . . . We must know. We must know. We are the animal of inward hunger, and knowledge is our food.”

### The Necessity of Knowledge-Hungry World

In this context, then, the computer is seen not as a luxury of the indolent, nor as a threat to the human spirit, but as a necessity of the knowledge-hungry modern world. As the axe was to the men of prehistory, so is the computer to man today: a tool, an extension of his power. And, opposable thumbs notwithstanding, man's power lies in the muscles of his intelligence, not in the reach of his arm.

The problem of stating visually what amounts to some profound observations about the seemingly prosaic is neatly resolved in *Small Miracle* by a judicious combination of abstract and

“What is a universe? To man the universe is an endless voyage . . . we search for we are a race of seekers . . .” Scene from “Small Miracle.”

## “SMALL MIRACLE”

. . . an imaginative new IBM Picture Makes an Eloquent Case for the Computer

documentary cinematography. Lovely Renaissance engravings, a shot of Stonehenge at dawn, the graceful symmetry of a suspension bridge, for examples, are blended effectively with sequences showing the urgent press of an industrial age.

The result is total eloquence, and the answer to the question “What's the hurry?” comes easily: “Life is the hurry. The restless moving here and now, with the new miracles waiting. Born of that endless desire which says, I know, therefore I want. And newer tools are added.

. . . Man says, I want—and creates new instruments to build the bridges, to extend the search, to call forth the dream.” If the computer ever really needed an apology, it has it now.

*Small Miracle* is in the film library of the IBM Corporation. In addition to its use in the basic orientation of the company's employees, the film is also available for public showing. As a tour of the philosophic basis underlying our rush toward the future, or, simply, as a fine motion picture, *Small Miracle* is eminently worth seeing.

It is a premise of “A Small Miracle” that . . . from groups of civil engineers like these men . . .

. . . to school children . . . the computer has become as “everyday” as pencils and paper.

“We unlock one secret and find ten others . . . for we must know. We are the animal of inward hunger and knowledge is our food . . .”

“Man says, ‘I want’ and creates new instruments to build the bridges, to extend the search, to call forth the dream . . .”

Coast surfers bring film viewers "A Touch of California"

## Films' Role in Promoting American Travel

Versatile Films of American Airlines Have Reached 22 Million

**A**MERICAN AIRLINES' EXTENSIVE SERIES OF TRAVEL PROMOTION FILMS have been notable not only for their consistent excellence but also for the versatility with which they have been used.

Groups of 4½-minute pictures on such subjects as the moods of cities, national parks, sports, and historic places have filled a great demand from television stations for films of this length. They have also been combined into groups of three to make 15-minute "trilogies" for 16mm audiences. Over a period of three or four years they have reached a total of 120,000,000 persons through TV showings, and over 2,000,000 in club bookings. Distribution has been through the airline's own sales offices, and the facilities of both Association Films and Modern Talking Picture Service.

A recent immediate need for a film to supplement a new sales campaign on travel to California serves as a good example of the flexibility possible in the American Airlines 4½-minute film format. Taking ten of the short films on California as raw material, Red Sutherland, Director of Public Relations Special Services, and in charge of the film program, called in Jean Oser, one of New York's most skillful film editors, to put together a new film ready to go on the firing line with only a one-month deadline. The result, *A Touch of California*, with a brand new narration and new music, is now doing yeoman service in telling prospective travelers of the attractions of the Golden State. It was put together from the original works of Larry Madison, John Peckham and Allendor, and represents the footage of a half-dozen different cameramen. But the Oser touch has given it an individual character of its own. It stands as a new film even to those familiar with its components. Cost is estimated at about a fifth of what a new production would have been—and a new film could not even have been made in the short time available.

Another example of how films can take on a new life, even after they have already paid their way many times over is *Operation Golden Eagle*, a 26-minute picture put together by the U. S. Bureau of Outdoor Recreation in cooperation with American Airlines. This film, which urges the purchase of a \$7 Golden Passport card good for a one-year family admission to over 7,000 Federal Recreation areas, was made from five short American Airlines' National Park films: Grand Canyon, Big Bend, Cape Cod, Point Lobos and Yosemite. Each of them has been seen by millions of viewers on TV and in 16mm showings, but is finding renewed life as a Federal film. The Airline has purchased 300 prints of *Operation Golden Eagle*, donated them to the Bureau, where 200 are being used for TV bookings and 100 for use with conservation groups. 127 TV bookings have already been made in the short time since the film was released, and it seems destined to be one of the most popular films on the air this summer. The film gives full credit to American Airlines for its part in the production.

American Airlines, which has long been a favorite of seasoned business travelers, is well aware that future success also depends

on attracting more and more vacation travel business. The film format is particularly effective in meeting the sales promotion needs of this market. If demand should require it, groups of existing film could be put together to make essentially new half-hour films on other areas well-served by the airline, such as New England or Texas. The Airline is continuing to augment its library of 1½-minute subjects at the rate of about six a year.

Scene from American Broadcasting Company's "Worldvision" presentation

## Global Television Bids for World Audience

ABC Previews "Worldvision" Concept on Film at Mexico City

**E**ARLY IN MAY, a world-wide group of advertising people meeting in Mexico City were shown what live global television transmission of the 1968 Olympic Games will be like. The simulation demonstrated the broad reach an advertiser might accomplish by participating in sponsorship of telecasts of the games—to an audience estimated at two billion.

This look of the future was part of a film presentation by ABC International Worldvision to the 18th World Congress of the International Advertising Association meeting in the Mexican capital.

Worldvision, a network of 62 independent television stations in 25 countries, was set up through ABC International Television, which, itself, was formed six years ago by the American Broadcasting Company.

### Worldwide Audience by 1968

According to Donald W. Coyle, ABC International president, "Global television is not something that we are going to have to wait for. It is upon us now. By the end of 1966, satellites will be capable of communicating with two-thirds of the world. By 1968, when the summer Olympics originate in Mexico City, television will be able to reach all of the world—live!"

Mexico is now preparing ground stations for the global Olympic coverage. One hundred and fifty hours of transmission of the games from Mexico City to the world are being planned.

☆ ABC International Worldvision's filmed simulation, produced by Visualscope, Inc., of New York showed how a 1500-meter race might appear, and how a commercial might then be picked up on Japan. The film depicted the ending of live commercials for airing and later broadcast in a particular country.

### Unity Through Understanding

One excerpt from the film is a theoretical conversation between a director in Mexico City and a director in Moscow. The Russian says, "Yes, we're receiving you, but we're only commercial one each now and we're not used to it. To which the voice in Mexico replies, "Don't worry, it'll grow on you."

Mr. Coyle, speaking to the advertising men, said that "global television, aside from its commercial value, would prove to be a tremendous force in uniting the peoples of the world through better understanding."

He said that although it is true that while television in its commercial aspect would make continuing, vital contribution in stimulating the flow of goods and services, that "trade, after a fashion, is communication."

"Products can carry messages," he said, "messages of progress, of the better life, of creativity, of a bountiful environment. Commercial television now reaching to every corner of the earth stimulates not only the best artistic talents of a society, but its business industry."

# BUSINESS SCREEN INTERNATIONAL

## Natural Gas: Power for British Industry

How International Cooperation Helped Assure a Vital Fuel

500,000 JOBS IN PERIL was the headline in British newspapers at the end of January, when Britain's auto industry, among others, shut down for a week owing to a breakdown in the gas supply system.

One after another industrial plants were closing, the head of Britain's nationalized gas industry called 500 newsmen in London — to give hope to the nation he headed the film *The Methane Story*.

### Relies on Coal to Make Gas

With no natural gas supplies of its own, Britain, for 150 years has relied on coal as its sole gas-making material. This is in contrast with the USA whose natural gas supplies provide more than 30% of the energy market.

The cumulative effect of a fall-off in coal production, war damage and obsolete gas-making plants all added up to a potential power crisis in Britain, when, in 1959, Mr. William Wood Prince, president of the Union Stockyards of Chicago, found a way of carrying liquefied natural gas up the Mississippi River in specially-designed barges.

### Methane Transported by Sea

In 1959, a joint US/British venture built a prototype methane barge to carry natural gas by sea. This brought the first 2,000 tons of liquefied methane from Lake Charles on the Gulf of Mexico to England.

This triumph was the beginning of the story told in two films—*The Methane Story* and *Saharan Venture*—sponsored by Britain's Gas Council. It is a story of international exploration, experiment and

*"Methane Princess" delivered first sea cargo of liquefied natural gas.*

Natural gas field at Hassi R'Mel in the Sahara where gas is piped to coast and shipped to Britain.

achievement harnessed to the driving force of business enterprise.

In the U.S., Continental Oil joined Union Stockyards — later joined by Shell — and the international company, Conch International Methane planned for the importation of natural gas from the newly-discovered oilfields in the Sahara Desert.

### New Supplies from Algeria

Further amalgamations, this time with the French owners of the oilfield formed a jointly owned company CAMEL — to supply 35,000 million cubic feet of natural gas from Algeria to England — a distance of 2,000 miles of land and sea.

Pipelines were built, jetties and harbours constructed in Algeria and England and a \$30 million gas pipeline cut through the heart of England's heavily populated areas to carry the gas from the coast to the industrial areas 200 miles away. Specially designed ships were built, to provide a continuous shuttle service.

In the films — *Saharan Venture* is the short, non-technical version (18 minutes) and *The Methane Story* is the full technical report (45 minutes)—the full story of

this great \$160 million international venture is told, for, Saharan natural gas is now burning to power British industry.

In Algeria the gas is a vital factor in the national economy—in Britain the use of natural gas forms part of an important diversification program for feedstocks — to stabilize costs and prices. And —

it is all due to the U.S. enterprise which inspired Mr. Prince to float that barge full of gas up the Mississippi!

In the films we see this great venture unfolding—as it happened, shot by British, American and French camera teams—its own example of international co-operation in film production.

Rank Short Films' director Joe Mendoza (left) explains point in "The Customer and You" to the salesman featured in film.

## Britain's New Sales Training Film Series

Premiere of "The Customer and You—Two Way Communication"

EVERYBODY IN SELLING knows how difficult it is to train salesmen really well. For many years the U.S. has supplied effective sales training films which are widely used in Britain, France, Germany, Holland and the Scandinavian countries — and many a European salesman owes the success of his career to U.S. training techniques.

Now, the Rank Organisation, world-famous for entertainment films and "commercials," has produced the first of a series of British-made sales training films, *The Customer and You — Two Way Communication*. This is a 16mm, 25-minute film, produced to appeal to every salesman, experienced or up-and-coming, whatever he sells. As it relates directly to the salesman's job and how to sell, it provides a valuable insight into European selling methods, which should be of special interest to U.S. export marketing men.

### Takes Up Five Basic Steps

The film is issued with a comprehensive meeting guide—and the action is divided into five basic operations. First—it demonstrates

how a salesman must ask questions and get the prospect talking. Second—he must listen to what he has to say—don't bother him with details—and get the facts straight. Third, prospects must be treated as people by ensuring that the sales arguments are in line with the prospects' personal needs. Fourth, speak the same language—don't talk above his head in terms of technical detail.

To drive home the five basic rules — a TV Commercial type "Presenter" breaks into the action of a wild boxing match intercut with a "punch-up" salesman overselling insurance. He says, "that's not *salesmanship*—that's just selling — wading in with one sales point after another . . ."

### Selling's Like a Judo Match

To emphasize that selling is an art where it is necessary to watch and feel the other man's every move, the action shifts to a judo match. Then back to the salesman selling insurance, this time correctly, asking questions to draw the prospect out. To allow discussion at the end of this, which is the first lesson, the Presenter asks the

# INTERNATIONAL

**THE CUSTOMER AND YOU:** leading question to start discussion and the screen goes blank as a cue to the projectionist to cut projection if required.

Lesson 3 — to Treat Prospects as People, a drug company's salesman is seen selling in a doctor's

*Presenter: "Selling isn't merely brute force—it's an art. A gentle art, like Judo . . ."* Scenes are from "The Customer and You."

*Here's a man who lives for two-way communication — an amateur radio buff a "ham" who asks questions, the first rule for communication . . .*

*By asking questions, the insurance salesman established two-way communication with his customer . . . got him talking . . .*

*Listen, and keep on listening . . . that's our second rule. This equipment salesman is far too busy thinking about what he's going to say next to pay attention to customer.*

office — he fails when he sells "straight," but succeeds when he shows understanding of the doctor's basic problems.

The final two lessons are illustrated by car salesmen, ham radio operators and in an electrical goods showroom. In each case the

*The personal approach between the drug salesman and the doctor makes all the difference . . . two-way communication is person-to-person . . .*

*This customer isn't interested in fuel economy and he shows it . . . this was a warning to the car salesman to keep tuned in, but he didn't.*

*Speak the same language, always making sure your prospect understands what you are saying . . .*

*The salesman could look like this for all he sense he makes . . . he wasn't speaking the same language as the housewife customer . . .*

presenter sums up and starts the discussion ready for the instructor to take over.

Four sales training advisers collaborated in the scripting and production of the film — foremost names in European sales circles. They are Stanley Oberman of Dexion Limited; Norman Taylor of Confederation Life Insurance Company; Martin Sterne of Bayer Products (Pharmaceuticals); and P. J. Nickolls of the Ford Motor Company.

The meeting guide issued with the film is in nine sections: Introduction, Synopsis of the Film, Objectives of the Film, Preparing to Use the Films, Uses for the Film, Techniques in Using the Film, Guide to Discussion After Showing, Role Playing After the Film, and Follow Up on the Job in the Field.

**Available from United World**

Distributed by United World Films in the USA, and the Rank Film Library in Britain, *Two Way*

*Communications* provides many useful aids to successful sales instruction and discussion leaders will appreciate the fact that teaching points are clearly illustrated by a number of different examples, selected to cover most sales situations.

The use of the "Presenter" link man contributes to the involvement of the students and their self-identification with the action. Mistakes, when presented, are not embellished but made in such a way as to encourage students to see both sides before discussion starts.

**Intuitive Knowledge Is Needed**

Discussing the film, Reg Hogg, of Rank Film Library, says "There is no way to selling successfully, but there are many ways by which a salesman can be trained to meet every difficulty, not by rule of thumb, but by intuitive knowledge. I am sure this film will prove to be one of the most successful ways."

## Film Helps Create Demand for U. S. Citrus

**F**OR TWO YEARS, John Haeseler, founder of John Haeseler Educational Films, carried out an in-depth audience research to evolve the ideal film for European housewives, teachers and homecraft students. Titled *California Sun Fruit* the 20 minute color film, sponsored by the California-Arizona Citrus League is being premiered in twelve European capitals at U.S. Embassy meetings.

Probably one of the most closely researched films yet planned for all-Europe distribution *California Sun Fruit* begins in the citrus groves of the Far West, bringing to Europe the sunshine and rich color of the fruit and trees — the gold of the oranges, and the bright yellow gleam of lemons and grapefruit.

**Citrus Exports Dropped 50%**

Prior to World War II California citrus fruits represented a big import item for many European countries, but postwar dollar spending restrictions developed citrus producers nearer home — in Southern Europe, Middle East and Africa. In particular, exports of California fruit to Britain dropped from 10% of the national citrus fruit consumption to the present figure of under 5%.

To recover lost European markets and develop new ones, the California-Arizona Citrus League, representing thousands of growers, has set up a marketing headquarter

in Brussels, Belgium. Spearheading an intensive marketing and promotion campaign to stimulate public demand for California citrus fruits, is the film "*California Sun Fruit*."

**Film Must Be Truly Useful**

It was realized that to gain maximum acceptance the film should be suitable as educational material in Europe's schools, accepted by teachers and enjoyed by students. In addition, housewives all over Europe should be encouraged to screen the film at home economics and general club meetings.

To establish his audience requirements, Haeseler set up operational headquarters in Paris in 1963, and, with a rough-out of the basic film, discussed its merits with hundreds of educational, film distribution and women's group specialists in twelve countries.

**Some Facts Behind Research**

Introducing the film in March at the U.S. Embassy in London, before an audience of over 100 British women's and educational press and user group representatives, Haeseler revealed some interesting facts from his research.

The ideal length of a film — to be acceptable in all European countries, in schools and for general audiences is 20 minutes, and to cover Europe seven language versions are required — English. (CONCLUDED ON PAGE 16)

## Now add **MOTION—** and slides tell your story more clearly, more completely, more dramatically than ever

Now, when your subject is complicated, you can add motion to your slides to explain what's happening in a machine or system. For example, a single slide now can tell more clearly than words what happens to air when the nose of a rocket hits it. Or how a heat-exchanger works. Or how steam moves through a turbine. Where once you needed a dozen slides for a complicated idea, a single slide now conveys it better.

You can show motion slides with your KODAK CAROUSEL Projector. All that's needed is a simple, inexpensive, easily attached KODAK Motion Adapter, along with slides specially prepared for use with the Motion Adapter.

The Motion Adapter is part of a complete projection system that lets you make more lifelike, more dramatic slide presentations. You can have color, sound, motion. You can add the excitement of dissolves, the drama of a change in pace.

This versatility revolves around the jamproof KODAK CAROUSEL Projector and its famous round tray. One tray holds 80 slides. You get instant editing, yet the tray is spillproof. You can even link up two projectors to give you an exciting 160-slide presentation with fades, dissolves, and coordinated taped sound. You can program for unattended operation. We can even show you how to build a control center that runs a whole bat-

tery of slide and motion-picture projectors to give you a presentation that keeps your audience on the edge of their seats. Want the story? Just use the coupon.

INVENTORY OF THE LATEST F&B/CECO FILM  
PRODUCTION RENTAL EQUIPMENT WILL BE  
PERMANENTLY LOCATED ON THE PREMISES OF

# Studio City

In keeping with our tradition of serving the world's finest film makers, we have stocked the Studio City stages with the latest camera, lighting, grip, sound and editing equipment—enough rental gear to shoot multi-million dollar features, TV series, commercials and industrials in black & white or color. Additional benefits for the producer are:

- ★ No transportation charges ever.
- ★ Immediate back-up equipment on premises—no need to over-order.
- ★ An F&B/Ceco supply store also on the premises—stocked with film, tape, electrical and all other production supplies.
- ★ An F&B/Ceco technician on the set—for immediate maintenance and additional equipment, if needed.

All this, in addition to our Hialeah branch—headquarters for all your South-Eastern production requirements—complete rental, sales & service facilities.

# BUSINESS SCREEN

## Florida for Film Production

WITH CLIMATE AND TERRAIN already staunch allies of the Southeast Florida region, business and civic leaders of Dade County (which embraces the greater Miami area) have shown considerable evidence of their interest and cooperation in helping create favorable economic and political conditions on behalf of the motion picture and television industries they want to see firmly established in the state.

New enthusiasm has been engendered on a statewide basis by the announcement of a Florida version of Disneyland in Orange and Osceola Counties; Roy Rogers' plans for a nearby "Western" attraction have brought further excitement. Film-minded Dick Pope, founder of the famed Cypress Gardens at Winter Haven, is a principal figure in state development activities.

But memories linger of previous ill-fated "movie" ventures in Florida and feeling is strong that "this time it has to be different." By different, the men who influence Florida affairs mean "well-financed, stable and permanent." And if their success in attracting industry of other types to Dade County can carry over to film and television production, the future can indeed become very bright.

Already extremely active in Florida are such veteran film makers as Van Praag

Productions, VPE, MPO Sarra, Inc. (of Chicago), Fletcher Smith and Reela Films, the home-based subsidiary of Wometco Enterprises. The considerable talents of Ivan Tors put a firm foundation on that studio's large facility in North Miami. Builder-developer Dave Brady, highly-regarded for his investment sagacity, offers the new Studio City, also in North Miami. This new film center has a great many economic advantages to offer the producer.

Dade County business leaders who comprise that area's influential "Committee of 21" have done yeoman work in advancing the regional economy by attracting many kinds of new industry. Its working committees include leaders in many fields.

The results are evident as industry and commercial groups move into the area. Dow Chemical Company has located its Latin American offices in Dade County. National Air Lines maintains its national headquarters here; Eastern Airlines has a very large maintenance base. New electronic, textile, furniture and other manufacturing establishments have created new job opportunities and brought Dade County high on the list of national industrial centers. By the close of 1964, there were 1,597 manufacturing plants in the county and Dade ranked 27th in the nation.

*In the pictures (at left): aerial view of a section of Miami Beach with its miles of hotels. Below: the fast-growing skyline of downtown Miami rims the city's famous Biscayne Boulevard.*

International Airport welcomes visitor.

South Florida's countless miles of palm-fringed beaches provide tropical settings for films of every description—including TV commercials!

Game fish abound in Gulf Stream waters and the sport fishermen can take some big ones or play the surf along this Golden Coast to get action.

## GOLDEN MECCA OF SUNSHINE & SCREEN

**S**CENIC COLOR, prime ingredient of today's films for theaters and television, is a Number One asset of Florida's coasts and inland parks and waterways. The nearby Caribbean islands and the Keys are dividends for the producer and sponsor. And the bright, smog-free sun assures bright images the year around.

Don Hudson, writing in the periodical "All-Florida" whets the appetites of film makers with these lines:

*"The camera would begin with a panoramic view of Florida — the two coasts with their beaches, next zoom down to the year-round shooting possibilities in climates varying from the sub-tropics of South Florida to such places as the caverns of Marianna, to the Amazon-like foliage of the St. John's River, to the islands of the Keys.*

*"Also brought into focus would be the sophisticated and ethnically diversified cities of the Gold Coast, the cattle ranches, orange groves, pine woods, rural settings, Africa-like plains of the Everglades, and the space-age glamour of Cape Kennedy."*

Numerous scenes in the *Flipper* color television film series have captured the sea and landscapes of this golden mecca of sunshine and sport. Manufacturers of sports and marine equipment regularly film their dealer presentations in Florida and make their television commercials here, as well. Outdoor sports clothes, swim apparel and winter vacation fashions have been lensed in Miami and other South Florida locations. Those new cars you've seen zooming along the beach on your television screen were photographed in the region.

Want something different in locations? There's an 800-year old Spanish monastery, a Monkey Jungle, a Japanese Garden, the famous Miami Seaquarium and a millionaire's former "pleasure dome" (the famed Vizcaya estate) all within a comparative few miles' reach of the center of downtown Miami! Oceanography has become an important part of the curriculum at the University of Miami — and a factor as this subject attains increasing world interest.

There's buried treasure, so they say, along the South Coast and the Keys but the real treasure lies in the many and varied locales.

Cooperative local authorities give evidence understanding that producers need traffic control and other types of cooperation who work within the city or Dade County.

And now that 35mm color film process is available in North Miami, "dailies" are checked on the spot. That single item is an important producer asset.

### Continental Cinema Corporation Will Produce Features Within Studio City

Milton H. Lehr and Lawrence S. Rapaport principals of International Video Productions of London, Lisbon, Madrid and San Juan announced that the company's North American affiliate, Continental Cinema Corporation, to be located on Stage One at Studio City.

IVP has created over 2,000 major spots for European and South American television; many of these are now in syndication through the BBC, Radio-Television of Portugal and Movierecord of Spain. Overseas executives assigned to IVP's new home in North Miami include production manager Gareth Daes, London; art and stage director Arnaldo Taborrelli, Madrid; and director Jon Soffel, Lisbon. All types of films will be lensed.

Dade County's industrial growth has been catalyzed by its Committee of 21. By the end of the county ranked 27th in national industrial production.

Night view of Miami's glowing and growing metropolitan skyline. This "young" city was born just 70 years ago.

# STUDIO CITY

## FILM CENTER: STUDIO CITY IN NORTH MIAMI

NORTHEAST FLORIDA'S ADVANTAGES as a burgeoning new center of U.S. film production are complemented in recent months by the opening of Studio City, a 30-acre producer service complex, located on a 65-acre site in North Miami, just off Biscayne Boulevard on Northeast 151st Street. The builders and developers of this all-embracing service center are Dave Brady, board chairman and president of Studio City, and his brother, vice-president Ray Brady.

Business and civic leaders of Dade County have high regard for this energetic and youthful group of entrepreneurs. Far-sighted projects of this kind are nothing new for the Bradys, who have extensive holdings in the area and are the developers of Interarama Industrial Park, the site of Studio

Dave Brady (left), board chairman and president, with vice-president Ray Brady, builders and developers of Studio City complex.

Above: this modern doorway leads into large sound stage now ready for producers using Studio City.

with modern, air-conditioned studios of the latest design, they have completed two mammoth sound stages, two smaller sound stages, a set and exhibit construction building, a film laboratory building and a convenient nearby producer office structure.

The cooperation of state and local authorities, fast learning the intricacies and special requirements of the film producer, has spurred nationwide interest in Studio City. There are positive economic advantages "built-in" to this development. Item: a million-dollar inventory of production gear made available on the site by Florman & Babb Cece, Inc. Item: studio rental costs are

City. Well aware of the tight situation on the West Coast and in other Eastern centers—and armed with the knowledge of the expanding need for production facilities which combine the all-season exterior bounties of Florida and of the nearby Caribbean,

Studio City's 65-acre complex at 151st St. and 19th Avenue, in North Miami, embraces the existing and planned structures shown right: 1. Studio City Construction Corp. for set construction. 2, 3. Large "twin" sound stages — (completed building in foreground). 4. The planned 800-seat theater. 5. Executive office building. 6. Capital Film Laboratories plant. 7. Proposed 100-room hotel-motel. 8. Small stages, special effects, animation, etc., optical depts. Present smaller sound stages are in background, behind the Capital Film Laboratory.

One of the two larger sound stages at Studio City. This huge stage has a 125-foot depth and is 80-feet wide, with a 40-foot high ceiling with its overhead catwalks. Each of these two stages is identical in every detail with the exception of a wet and dry pit. One stage has a dry pit (30-feet x 30-feet, with 10-foot depth) for use as a basement or for multi-story shots. The other stage has a wet pit, 18-foot square with a four-foot depth and can be used for miniature water sequences. Besides the stages, but well-separated, are four executive offices, conference room, a rehearsal room, four dressing rooms, a wardrobe room, make-up and hairdressing department, camera room and darkroom. Additional stages are already planned in a later development phase.

minimized by set construction in the adjacent special building for this purpose. Sets are easily moved into any of the sound

stages whenever shooting begins. Item: studio rental costs are minimized by set construction in the adjacent special building for

At right: David Spector, head of Dixie Displays & Exhibits, Inc., affiliate of Studio City Construction Corp. He's a widely-known specialist in exhibit and display design and construction. Below: this building houses the concurrent set construction facility, adjacent to large sound stages, and has completely equipped carpenter and set painting shops to handle all jobs.

this purpose. Sets are easily moved into any of the sound stages when the shooting schedule is ready to go. Item: 35mm sound "dailies" are available overnight from Capital Film Laboratories' new plant, just across the street from either of the two sound stage areas.

A helicopter port alongside the Capital Lab is serviced by another Studio City affiliate with long experience in filming aloft. Airline passengers arriving at the Miami International Airport are in business within hours of their departure from New York, Detroit or Los Angeles. Actually, both the airport and Miami Beach are only minutes away by either car or cab. Cooperating airlines promise "red carpet" service for talent, technicians, studio executives and sponsors.

Dave Brady calls the immense stages and other buildings already complete at Studio City "only a beginning." The second phase of this complex, already under way, includes the erection of a 600-800 seat theater (allowing producers the controlled conditions for taped television shows or for live telecasts). Also planned is a 10-story hotel-motel which

will house actors and technicians and a two-story administrative building.

The third phase of Studio City envisions the construction of a second sound stage area and the dredging of a lake on which to shoot water scenes. Sizeable acreage beyond the present sound stages and lab building includes the construction of historic buildings and an "outdoor lot."

Present facilities are, however, most adequate for almost any kind of indoor theatrical television or industrial production. Veteran motion picture executive Sam Segal, director of Studio City operations, points with pride to the nation's most modern sound stages, each 80-foot by 125-foot, with 40-foot high ceilings.

These buildings contain two-story dressing rooms, script director's office "banks" (a separate and private). One stage has a 30-foot square dry pit (10-foot deep); the other has an 18-foot square pit for water sequences.

Two smaller sound stage areas, forty-feet x 80-feet with 30-foot high ceilings, have permanent

Van Praag Productions, Inc. is the first of national film makers to take office quarters at Studio City and has long been active in the Florida scene. Says company president Bill Van Praag, "We were first to spot the potential of Studio City and the first to take production simply because the move made good sense both for us and our clients. Here, for the first time, we have a complete professional capability where our creative people can get the full scope of their talents on a job of making and completing outstanding films at a minimum cost to our clients." To record, Van Praag crews have shot 50 films of all lengths and descriptions for 56 of their clients on location and in Studio City stages.

and have been active for years for network television commercial production. Where heavy transport is required, Studio City officials point to the railroad siding on their premises and the immediate availability of truck rental facilities. Electric carts wheel film trailers through the lot, taking them from modern resident offices to sound stages in seconds. Making up Studio City Construction Corp., builder of sets and producers in the special shop being erected for this purpose, is an affiliate: Dixie Displays & Booths, Inc., headed by David Spector. Spector is best known for his work on the Spanish, Ha-

Sound Stage 5 at Studio City, one of the two smaller stages, measures 80-feet by 40-feet with a 30-foot ceiling. It includes a permanent "eye" as shown in the picture above taken during setup for a recent television commercial production. Note the large teapot set in the foreground above.

Segal, Studio City's director of operations and a veteran motion picture executive (left) with his associate, Harry LeVous, secretary of Studio City. They are the men behind-the-scenes of this complex.

waiian and IBM Pavilions at the New York World's Fair and is the former vice-president of Display Studios, Inc., of New York City.

How about talent? With the pick of stardom already well aware of Florida production potentials, many leading television and motion picture players have already worked in the area. Jet transport carries them from Hollywood or New York to this haven of sunshine and sea sports.

And what about technicians? IATSE officials in Southeast Florida are enthusiastic about the growth possibilities and their cooperation has been assured. Not

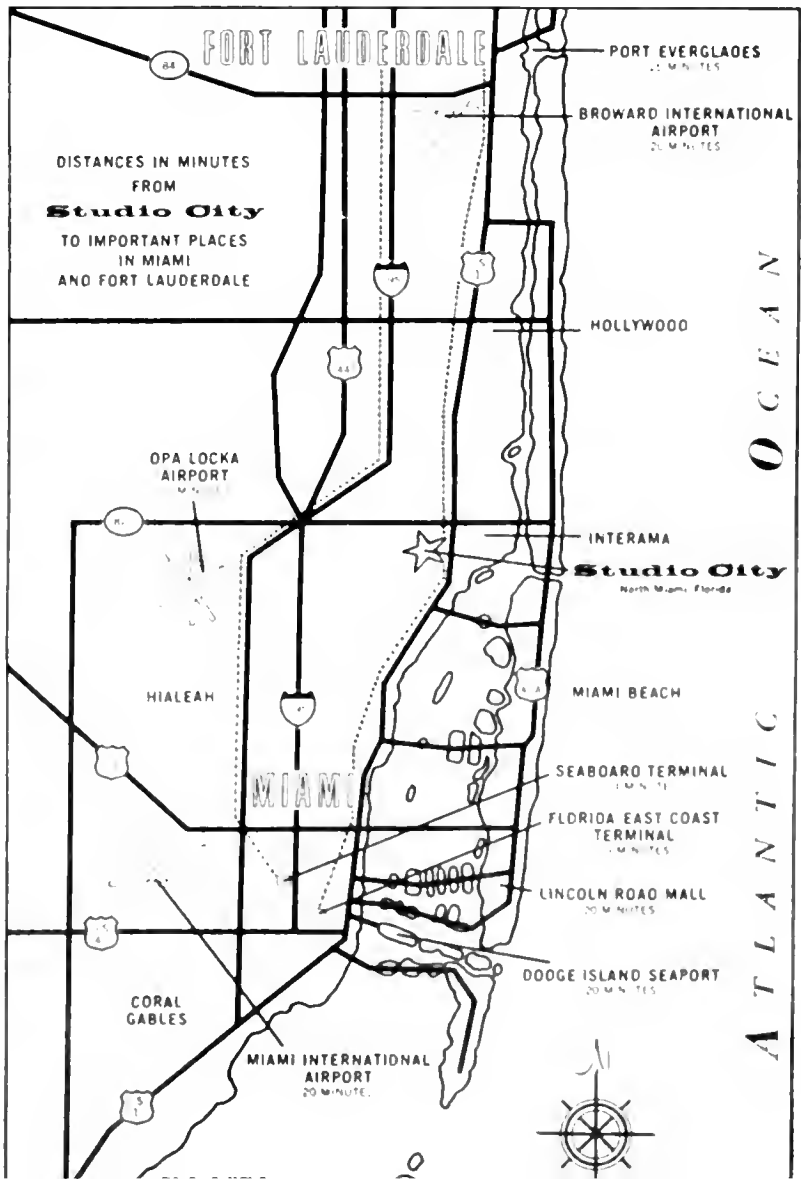

only are many skilled veterans already in the area, looking forward to continuous employment, but other film-making specialists receive the same "red carpet" treatment when arriving from production centers in the mid-east, far west or from abroad. •

re's action on this Studio City sound stage as production of a TV commercial takes shape on Stage 5, one of the two smaller facilities.

FILMING IN FLORIDA

#### YOUR CONVENIENT MAP OF STUDIO CITY'S LOCATION

## IVAN TORS STUDIOS

Filming a scene for Tors-MGM science-fiction picture "Around the World Under the Sea" on the Ivan Tors Studios' 10-acre lot in North Miami.

## TORS STUDIOS LEAD THE WAY

Producer of "Flipper" TV Series and Feature Films  
Believes Production in Florida Has Great Potential

WITHIN RECENT MONTHS, at the large and constantly-expanding Ivan Tors Studios in North Miami, one unit was shooting a segment of the nationally-telecast *Flipper* color series, while another unit filmed a theatrical feature for Columbia Pictures' release. The outdoor and underwater action scenes for the latest James Bond' thriller *Thunderball* were filmed in and around Miami.

Evidence of Tors Studios' growth are the two recently-completed sound stages which give this South Florida facility the capability to film a multi-million dollar theatrical feature, a television series and a TV commercial simultaneously. Both new sound stages have unencumbered interior measurements of 90 by 125 by 40-feet. They are fully sound-

Howard B. "Ben" Chapman, president of Ivan Tors Studios, in Miami.

proofed and supplied with 100 tons of air-conditioning.

### From Scripts to Production

Ivan Tors, who first came to Hollywood as a film writer and achieved screen credits on major films starring such varied per-

sonalities as Katherine Hepburn, Judy Garland, Greer Garson and Red Skelton, launched his career as a producer in 1951. From the outset he began to explore the fascinating realm of science-fiction feature films about astronauts, space stations and nuclear fission concepts. It was this same visionary spirit which led him to the opening in April, 1964, of the studios which bear his name on the 10-acre lot in North Miami.

sonalities as Katherine Hepburn, Judy Garland, Greer Garson and Red Skelton, launched his career as a producer in 1951. From the outset he began to explore the fascinating realm of science-fiction feature films about astronauts, space stations and nuclear fission concepts. It was this same visionary spirit which led him to the opening in April, 1964, of the studios which bear his name on the 10-acre lot in North Miami.

### Chapman Heads Florida Studio

Ben Chapman, associated in all of Ivan Tors' productions since they met in 1954, is president of the Florida operation. It is his responsibility to work out the physical logistics of transferring Tors' imaginative ideas from script to the finished product on film. He comes well qualified for his exacting assignment.

Beginning as a barnstorming stunt flyer, he was a fighter pilot in both World War II and the Korean conflict. In his movie career, he has handled the production logistics for such major films as *Bridge on the River Kwai*, *Sayonara*, *The Young Lions*, *The Egg and I*, and *Escapade*. His first movie credit was for *This Is My Love*, starring Linda Darnell. He also produced *Rhino!*, mainly on location in Africa.

### Hard Core of Professionals

Chapman's major accomplishment in Miami has been the building of a hard core, permanent crew of people skilled in all the motion picture arts — from set designers and dressers to camera techni-

cians, property men and directors who can act. He imported Hollywood experts to help train Floridians and found a favorable and cooperative labor situation in a state where the vital need for new job opportunities because of its population explosion, the highest percentage increase in the U.S.

### Florida's Advantages Needed

Chapman, a Miami area resident, is an ardent booster of production in Florida.

"We can turn out the same quality work for 25 to 30 percent less here, all factors considered," he says. "We not only have a friendly labor situation, but the state and local governments are very sympathetic to our particular problems, because everyone is trying to create new industries and new jobs in Florida."

"This attitude is helpful," Chapman continues, "but the real advantage of Florida and the adjacent Bahamas and Caribbean is the variety of locales — every kind of setting you can name and a climate that lets you schedule shooting around the weather with dependably clean water."

"We have more hours of sunshine to work in during a cycle than we would have anywhere else that, with the locales, is important to the type of picture becoming increasingly in demand with the expanding use of color."

Ivan Tors Studios spends more than \$10 million in salaries, services and supplies locally last year up from 1964 when the sum was in excess of \$3 million.

Below: checking over new Bell & Howell Model C Additive Printer at Capital Film Laboratories' Miami plant is general manager Bob Hutto.

# CAPITAL'S GOT COLOR

Miami Plant of Washington-Based Film Laboratory  
Has Installed Custom-Built 35mm Color Processor

FILM PRODUCERS throughout the Florida-Caribbean and Latin-American areas can now have one of the industry's most sought-after commodities: overnight 35mm color film "dailies." Set up to produce professional 35mm color film processing on the custom-built line equipment recently installed at its Miami branch is Capital Film Laboratories, Inc., Washington, D.C.

"It has been obvious for a long time that Miami is a growing market force" in the film industry. "Not only Hollywood and New York," says Capital president Alfred E. Bruch. "We expect our Miami laboratory there to contribute a substantial part toward making this growth a reality."

## Think Capital? Think Color!

Tom C. Gale, sales manager of the Miami facility and sales representative for the parent company, stresses the extensive film services at the new plant is now ready to provide:

"When you think of Capital-in-Miami," he says, "think 35mm color. Our services include: processing of 35mm color negative, printing of 'dailies,' composite and release prints with fades and dissolves, master positives, color negatives, film cleaning, Vacuum treatment, screening, scene timing and edge-numbering, to name just a few."

"It took some doing, but that 52 foot long custom-built color processor is now in operation at Miami and its output has drawn superlatives. The big

machine incorporates the latest in accurate temperature control and solution filtration. It runs at a speed of 90 feet of negative or 120 feet of print stock per minute. This computes out to a capacity of 5,400 feet of negative per hour or 7,200 feet of prints per hour.

### Daily Capacity of 96,000 Feet

Total two-shift output from the present equipment shows a capacity of 96,000 feet of color per day . . . more than adequate to cover present work loads.

The Miami lab features the latest Bell & Howell Model C ad-

Alfred E. Bruch, president of Capital Film Laboratories, Inc.

ditive color printer equipment. Of special interest to quality-conscious producers are its many Agnew Higgins Laminar Flow "clean room" air filters (the same kind used in space program "clean rooms" and these are installed in all film handling areas.

A special Cuematic cueing system has been integrated with the timing and printing portion of the laboratory's procedures. This system assures that no negative notching or any other "on film" cueing device is needed in order to print the customer's negative.

### Has a Stand-By Power Source

Installation of an Onan generator that starts up within five seconds if normal power fails due to a storm or other causes assures round-the-clock operation. The generator is capable of powering the processing and support equip-

**CAPITAL**  
FILM LABORATORIES INC.

This modern Studio City building houses Capital Film Laboratories new custom-built 35mm color processor; complete tape equipment for sound.

ment without loss of a single foot of film.

Recently added to the laboratories' full complement of sound equipment is a complete "daily" sound transfer capability. This equipment includes the latest type of Ampex quarter-inch tape playback machines and a new Westrex 35mm recorder which will transfer quarter-inch studio or location recordings to 35mm magnetic film and transfer 35 mm magnetic film to quarter-inch tape for protection.

The lab also "synes" and cues the picture and sound "daily" . . . ready for interlock screening. Screening facilities are available within the building.

In addition to these sound services, Capital will provide (on adequate advance notice), a complete

location recording crew, utilizing Nagra equipment. General manager Bob Hiltwine, who directs operations at the Miami facility, is enthusiastic about the tools at his command:

"We're set for top-quality output on film production schedules geared to modern-day producer requirements," he says. "Our processing, printing and sound equipment is justly famed for its precision and reliability and we have, here at Capital-in-Miami, one of the industry's most-needed service facilities. We can and will meet the most exacting demands, whether for theatrical, television or industrial color production."

Capital Film Laboratories in North Miami is located at 1998 N.E. 150th Street. Headquarters lab is in Washington, D. C.

Below: Capital's custom-built 35mm Filmline color processor is 52 feet long, incorporates the latest in accurate temperature control and solution filtration on its runs.

Tom C. Gale, sales manager of the new Miami-based lab.

# F&B/CECO SHARES FLORIDA'S GROWTH

Expert Staff, Large Inventory of Producer Equipment at Hialeah Branch

**P**ATIENCE AND PERSISTENCE have paid off for F&B Ceco, Inc., nationwide motion picture equipment firm. Considered at one time to be a minor offshoot of its New York headquarters, the wholly-owned and operated Miami branch, located in nearby Hialeah, has sprung into prominence with the upsurge of Florida film production.

Started in 1959, with a staff of three, it has since blossomed into a fully-equipped and staffed operation, with separate supervisors and rental departments for camera, lighting, sound, editing, and projection, as well as complete repair and sales facilities, all under the capable general management of the ex-New Yorker, Norman Zuckerman, with able assistance from camera rental head, Egon Stephen, and sales manager, Jack Ware.

### Permanent Inventory of Rental Equipment

The producer is serviced by a multi-million dollar permanent rental inventory, highlighted by the F&B Ceco Mitchell BNC Reflex Cameras; the Aero-Vision helicopter mounts; generators, including a 1500-amp truck, and enough lighting, grip, camera, sound, and editing equipment, to supply any type of film production.

Recent expansion includes the addition of a completely sound-proofed and air-condi-

tioned 80 x 50 foot sound stage which is available to all producers on a rental basis. Film veteran Jack Etra is permanently on the premises for free consultation with all producers.

### Has Equipped All Stages at Studio City

In its latest growth move, F&B Ceco has tied-in with the new Studio City complex to equip all their stages with the latest produc-

Manager Norman Zuckerman and secretary June Strickland coordinate a busy day's schedule.

tion rental gear, for the use of studio customers. Since the equipment is already on the Studio City premises, the producer saves on transportation charges, pays only for the equip-

F&B/Ceco's Hialeah branch is just 15 miles from Downtown Miami, Airport or Miami Beach.

ment he actually uses, and has the comfort and assurance that back-up equipment can be obtained immediately. To insure proper client service, F&B Ceco maintains a permanently staffed supply room right on the Studio City lot.

Arthur Florman, president of F&B Ceco and a leading innovator in the equipment supplier field, expresses his viewpoint on the Florida film production:

"Although it is extremely gratifying to see our Florida branch prosper, it does not mean the end of our expansion plans. We feel that while Florida is now a firmly entrenched major production center, it is growing by leaps and bounds, and we intend to grow right along with it, until its full potential has materialized."

Street level lighting department at Hialeah facilitates loading of heavy production gear.

Sales manager Jack Ware (having camera) records an editing supply sale at the branch.

Cameras receive thorough final check-out before their release to producers on location.

Inspecting a Moxiola before it is sent out on rental in the editing repair department.

Lighting Department prepares a 25,000 watt crane for use on a major area production.

Films' recent ground breaking ceremonies (left to right): F. F. Sack, vice-president and general manager of Reela; Robert Taylor; Ted Sack, vice-president and general manager of Metropolitan Dade County; Miss Elizabeth Juennas, "Hospitality" at recent beauty pageants; actress Geraldine Brooks.

## Reela's New Miami-Based Film Center

OF REELA FILMS' ground-breaking ceremonies, carried on pages last month, further mark the growth of Southeast Florida film production. Following the April 25th event, construction is well under way on the new, centrally-located new motion picture services and laboratory facilities in Miami. According to F. F. Sack, vice-president and general manager of this Wometex Enterprises' division:

The new Reela plant will provide the most complete service available in the Southeastern United States. The intent is to extend our current services to clients throughout this area and the U.S., Central and South America and the nearby Caribbean is-

land. The new laboratory will be able to handle everything from 10-second commercials to full-length feature films for theater and television. It will have equipment for tape transfer, sound recording, animation and titling and include six editing rooms, four

architect's sketch shows Reela Films' new producer services and laboratory facility being built in Miami.

Actor Robert Taylor and Ted Sack prepare to set off explosive for groundbreaking at Reela plant site.

of two latest film music libraries.

Two 500-square-foot screening and recording rooms and a fully-equipped "still" photographic lab are being built. The film processing equipment is being provided by the Hi-Speed Division of Artisan Industries: 16mm and 35mm for black and white film and 16mm for color — positive negative and reversal film types.

## VAN PRAAG FIRST AT STUDIO CITY

### MIAMI:

VAN PRAAG PRODUCTIONS, INC., first announced that it would move to STUDIO CITY in December, 1965 — when this sleek new film complex was a maze of bulldozers and man-made sand dunes.

On opening day, February 5th, President Bill Van Praag said "Obviously, we were not the first to shoot films in Florida — I believe Mack Sennett had that distinction. But we have been using South Florida locations since 1951 when we did a series of commercials for the Ed Sullivan Show — our first year in business. We opened our first office here in 1953.

"To date we have shot 596 films of every length and description for 56 of our clients. We were first to spot the potential of Studio City and the first to take space simply because the move made good sense both for us and our clients. Here, for the first time, we have a complete professional complex where our creative people can give the full scope of their talents to the job of making and completing outstanding films at a minimum of cost to our clients."

### Automated Coal Handling Shown in Dravo's "Stockmaster" Film

Overall capabilities and design features of a new concept in coal handling being employed at the Potomac Electric Company's Chalk Point generating station in Maryland are shown in a 20-minute, 16mm color film now available from the Dravo Corporation, Pittsburgh. The company's bucket wheel stocker-reclaimer, called a "key to an automated coal-handling system, is featured in *Dravo Stockmaster*.

The remote-controlled machine stocks coal from unit trains at 1,500 tons per hour; automatically reclaims 500 tons per hour to

feed the utility's boilers. The film is available to relevant groups through Dravo Corporation's Equipment Sales Dept., Neville Island, Pittsburgh, Pa. 15225. •

"Accelerated Service" Offered by Acme Film & Videotape Labs  
 Requests for "crash" delivery schedules on many of its services have brought a new "Accelerated Service" program at Acme Film & Videotape Laboratories, Hollywood. The service provides for undivided and uninterrupted attention from inception of an "Accelerated" order to delivery time.

Examples of the extra-expedited service on transfers, dupes and 16mm prints show that it can cut as much as days off normal lab delivery time. A 60-second tape-to-film black & white commercial on which Acme requires a full day for its regular service may be cut to four hours on the "Accelerated" basis. 50 high-band 60-second videotape color dubs, requiring three days, take only eight hours when service is expedited; "A" and "B" color original for answer print, a three-day Acme regular operation, is cut to two days on this special service program. •

#### Perfects New System to Make Optical Effects at Lower Cost

☆ What is called "a revolutionary method for making optical effects through A&B printing" has been perfected by Bob Richard, film editor for Don Feddersen Productions and is presently available in 35mm Eastman color but said to be adaptable to 16mm. A patent is being sought to cover the development.

A&B printing has been able to create lap dissolves and fades in TV color prints without the use of dupes but has been limited to these two types of effects. The new system, recently introduced by Richard, incorporates the use of black-and-white traveling mattes and is said to make possible all kinds of trick effects at small additional cost.

Richard credits Darrell Anderson of the Howard A. Anderson Company and Joseph Lee of Consolidated Film Industries on the project's development. "Without their help, cooperation and encouragement," he says, "this development would have taken infinitely longer." •

## Men and Events Along Production Lines

Architect's sketch of new Grandey-Mills' studio building in Burlingame.

Grandey, Mills Share New Studio Near San Francisco's Int'l Airport  
 Roy Grandey Productions, established in 1949, and Mills Animation, a recent development of veteran Bob Mills' activities, now share new facilities at 1881 Rollins Road, Burlingame, Calif., a few minutes from the San Francisco International Airport.

Occupying a separate building

in a lively industrial park, the two organizations have what may well be the largest studio in the Bay Area. The arched-ceiling, drive-in structure provides a total of 7,000 square feet of floor space. Included in the modern concrete building are a pillar-free staging area of more than 3,000 square feet; sound-recording and insert studio with interlock projection; screen-

ing room; animation studio equipped for both cartoon and animation from concept to camera, plus both animation and live action effects; other sound mixing, camera test and recording areas; office areas for research, writing and business affairs.

Grandey, who founded Grandey Public Affairs, Hollywood, is manager of Gene K. Walker Productions, San Francisco, while Roy Grandey Productions succeeded. Clients served include Standard Oil Company of California, Folger Coffee Division, Procter & Gamble, The Pillsbury Corporation, The Frouge Corporation, United States Steel and others.

Mills has been engaged in animation for over 20 years serving entertainment and TV commercial needs, as well as recording films for business. He is associated for a number of years with TV Cartoon Productions, Inc., selling his interest to Animation Graphics, now Mills Animation. His clients, many of them award-winners, include Standard Oil Company of California, Ortho Division of Beecham Chemical Company, Wells Fargo Bank, Pacific Telephone, and Sunbeam Bread.

Whether the finished product involves still photograph or filmstrip, animation or video or a combination of both, a motion picture, both modern staff capabilities which start with concept and carry through to completion.

Modern Sets Up "No-En" Service Facility at Los Angeles Office  
 ☆ The No-En film treatment, designed by the Vacuumation Corporation of New York City to provide trouble-free projection of continuous loop and cartridge films, is now available to West Coast producers, laboratories and film users as Modern Talking Picture Service, Inc. and Vacuumation have jointly announced national distributor's Los Angeles office at 2400 West 7th Street. The office has been equipped to serve West Coast accounts.

The move is of special interest to the 8mm and 16mm cartridge load film user as the industry that Western area now has direct local access to the technical "know-how" and trained personnel required for this specialized treatment service, noted as instrumental in trouble-free machine operation.

**Visualscope, Inc. Is Reorganized:  
Four Partners Assume Key Posts**

Visualscope, Inc., of New York, producer of a broad range of communications materials for business and industry, has been reorganized in order to offer its clients a wider spectrum of services and to provide for future expansion.

According to Robert G. Taylor, president, the rapid growth of the company in recent years has necessitated the addition of a full-time script department to the staff. Film writer Stanford Sobel, who has been associated with Visualscope on an informal basis for several years, has now joined the company as a partner.

The executive line-up at Visualscope now consists of four partners: Robert G. Taylor, president; Manuel Garcia Rey, executive vice-president and creative director; Marvin H. Green, Jr., vice-president in charge of sales; and Stanford Sobel, vice-president—scripts.

\* \* \*

**Head of Manhattan Sound Corp.  
Named V.P. of Parent Company**

Several corporate appointments have followed the absorption by Pellin Enterprises, Inc. of Manhattan Sound Company, New York City. Fred B. Adair, Jr., president of Manhattan, which is now a division of Pellin, has been elected a corporate vice-president of the parent firm.

Adair has confirmed the appointment of two vice-presidents at Manhattan: Gustave E. Mortensen has been named vice-president in charge of engineering and John J. Gordon is now vice-president in charge of sales.

\* \* \*

**Joseph Salzburg to Niles' Staff  
as Account Executive in New York**

A 30-year veteran in film production, Joseph S. Salzburg, has joined the New York staff of Fred A. Niles Communications Centers, Inc. He was formerly chief of production for the Commercial Films Division of United Press International.

According to Niles vp Charles Ticho, Salzburg will serve as an account executive for New York operations. He is a member of the Motion Picture Pioneers, a graduate of the RCA Institute videotape course, has traveled extensively.

Partners of newly-reorganized Visualscope, Inc., in New York City, are (left to right): Manuel Garcia Rey, executive vice-president; Robert G. Taylor, president; Marvin H. Green, Jr., vice-president for sales; and Stanford Sobel, vice-president for scripts. (see lead story on this page)

**Dear HFE:**

*You're told how processing control produces your color quality — now what's the story on prints?*

☆ ☆ ☆

**Dear Lab Customer:**

HFE Color Quality means prints must match the approved answer print in density and color balance. With the *personal* care given each customer's order, continuous tests are applied at every step, to meet this specification.

The color original is timed during line-up. For multiple prints an internegative is prepared and timing again assures balance for scene-to-scene color correction. Printing is done on new electronic, programmed Bell & Howell color additive printers.

Sensitometric strips are processed hourly with the production work to control proper density and consistent color balance. This control checks printer-performance and developing solution, assuring finest quality where it counts — in the finished product.

Technicians skilled in the use of the most modern equipment, plus constant watchfulness, are the keys to the satisfaction of the many critical print-buyers who have been customers for many years. A trial order probably will make you decide to join that list . . . or come by and see what we offer. Do it soon, won't you?

## TELEVISION'S ADVERTISING AWARDS

### Honors to 77 as Best of American TV Commercials

SIXTY-EIGHT CLIO STATUETTES were awarded May 5 at the 1966 Awards Dinner of the Seventh Annual American TV Commercials Festival, in the grand ballroom of the New York Hilton Hotel. The awards function climaxed a day of workshops and screenings of the outstanding commercials of the past year.

A capacity audience of 1500 advertising and production executives and many of their wives witnessed a program that combined the presentation of 38 Clios as "best" in their individual product categories, seven for special advertising challenges such as ID's and 20-second spots, six regional market awards, 16 citations for outstanding craftsmanship in such areas as cinematography, demonstration, design, etc. . . . with screenings of selected winners. Approximately 50 minutes of commercials were shown on the big screen of the grand ballroom.

#### 1,891 U. S. Entries; 221 from Overseas

Exactly 1891 entries were received by the Festival this year from advertisers, their agencies and production companies in the United States and Canada. An additional 221 entries were received from countries around the world, and 10 Clios were awarded to "bests" in international product areas as well.

Twenty-nine advertising agencies received Clio award citations this year. Leading the agency pack was Young & Rubicam with 11. Others with three or more awards were Doyle, Dane, Bernbach — 8, Benton & Bowles, McCann Erickson and Campbell-Ewald, all with 4, and J. Walter Thompson, with 3.

Thirty-three producers shared in the 68 Clios presented. The leader was VPI with 8, followed by EUE—6, Televideo—5, and Brillig, Freberg, and Rose-Magwood, all with 3.

#### Announces Program of New Foundation

In his remarks, Festival Director Wallace Ross announced the development of a Foundation to service schools and colleges with examples of fine advertising from the Festival's film and video tape library of over 10,000 commercials. Ross also mentioned the first Foundation project as a telecast on WOR-TV of a

Frito-Lay commercial won "Best Spokesman" honors for Bert Lahr. Agency: Young & Rubicam. Producer: MPO Videotronics, Inc.

Martini & Rossi Apertif spot "Sailing" best in International Category for the product. Producer: Cinema et Publicite, Paris.

selection of this year's award winner. Lahr pointed out that last year's initial telecast on WOR-TV, Channel 9, New York, had a rating of 9.0, far higher than any other program previously for that time period. He announced that WOR-TV was prepared to program an hour in color this summer providing the Festival sponsors would participate in the production cost. Details for this are being worked out at present.

Among the top award winners was Bert Lahr, winner of the Festival's "best spokesman" award, named this year for the first time in honor of Buster Keaton, who died the past year. Previous winners of the spokesman citation have included Edie Adams, Muriel Cigars and Alexander Scourby in the Johnson & Johnson commercials.

## Equipment Trade

HPI "Caritel" on the job.

(CONTINUED FROM PAGE 6) portfolio case. Within 15 seconds it sets up as a rigid, lightweight cabinet over the projector. The Caritel is 28 inches high and takes up less than a square foot of desk space.

The viewing screen is made of a newly-developed HPI "Durable Blue" plastic with a non-reflective surface. The Caritel is available from franchised dealers in the U.S. at under \$40 with an accessories portfolio carrying case also available at slight extra cost.

## ANIMATED PRODUCTIONS, INC.

1600 Broadway, New York 19

A revolution in photographic technology now makes it possible for you to bypass conventional laboratory processes and make your own slides and negatives instantly, conveniently, economically right at your own desk.

You can make sharp, crisp, brilliant B & W slides from any B & W or Agfacolor, Gevacolor or Fujicolor unmasked color negative, and make B & W negatives from color slides, microfilm aperture cards, strip film and movie clips.

Canon Kalvar film is exposed by Ultraviolet light (no darkroom), and developed by controlled heat (no chemicals).

Canon/Kalvar slides can be projected immediately, without fixing. This incredible new film never fades and has a hard, scratch-resistant image. Best of all, mounted slides cost under a nickel each (unmounted they're less than a penny!).

There's no faster or more economical way of previewing a positive image from a 35mm negative (B & W or color), making file copies of microfilm data or duplicating any 35mm material.

Write for free brochure and sample slide: Canon U.S.A., Inc., 554 Fifth Ave., N.Y. 10036.

**Instant slides. Without chemicals, in broad daylight, for less than 5¢ each. Canon/Kalvar System**

**Sylvania Introduces "ColorArc"**

**Lamp for TV and Film Lighting**

A new long-life ColorArc lamp, said to produce greater illumination but requiring less current input than conventional incandescent studio lamps of a similar color temperature was announced in May by Sylvania Electric Products, Inc.

The ColorArc, available initially in a 400-watt lamp, was designed for use in color television, motion picture production and commercial photographic applications requiring flood lighting. Color temperature, when operated vertically at rated input to its ballast, is in the range of 3200 to 3600 degrees K. When the lamp is operated horizontally, the range is 3400-3800-degrees K. The 400-watt ColorArc initially produces 85 lumens of light per watt.

In addition to offering increased lumen output efficiency, the ColorArc is expected to have an average rated life of 7500 hours in film studio applications, compared with

400-Watt Sylvania "ColorArc"

a 25 to 150 hour average rated life of incandescent lamps operating in a comparable color temperature range.

Use of the new lamp will require a possible change of adaptation of the socket and the addition of a ballast (which controls the applied power as in other arc-discharge lamps). The new ColorArc was developed at the Danvers, Mass., General Engineering Laboratories of Sylvania Lighting Products. •

\* \* \*

**Newest Mole-Richardson Light—**

**10,000-watt "Big Eye" Solarspot**

Latest addition to the Mole-Richardson Company's studio lighting line is a 10,000 watt "Big-Eye" Tener Solarspot, Type 4241, with a 24-inch fresnel condenser.

"Big Eye" Tener Solarspot

The new Tener is designed with back opening for easy access to the lamp. It has positive screw focusing. The "Big Eye" provides 450 ft. candles at 20 feet with 20-foot diameter spot. For complete details send for technical bulletin 301, Mole-Richardson Company, 937 No. Sycamore Ave., Hollywood, Calif. 90038, or request from our New Products Desk.

**SELLING CITRUS ABIDA**

(CONTINUED FROM PAGE 4) French, German, Dutch, Swedish, Danish and Norwegian, at accompanying literature for a fee can omit Norwegian as Swedish acceptable as a written language in Norway.

In three countries — Denmark and Austria — distribution to both schools and general audiences can be effected through a single non-theatrical film library — but in other countries, for example Sweden, Germany, Great Britain and Holland, it is necessary to select specialist distribution outlets for each main audience group to achieve optimum coverage. The print requirements for Europe is 1,000, of which 100 are in English and over 200 German. In addition in France it was found necessary to supply 1,500 sets of slides — as the French education system is centralized and on the day they are citrus in homecraft classes — nearly 1,500 schools participate.

## Capture 3 million people for 5 minutes.

Just give us an interesting and informative 5-minute film and we'll do the rest. We'll make sure that it's seen by people you want to interest and inform, people who want to know, people on the go: in airports, resorts, community groups, and in the home on TV.

With only 150 prints, we'll get you up to 7,000 showings: up to 2,500 showings per year in our free Skyport Cinemas; up to 2,000 resort showings during the summer months; 2,500 community shows (clubs, churches, schools and travel groups); and hundreds of telecasts.

Your film can be specially produced or a Digest "liftout" from a longer film already made. Either way, in the hands of Modern, it becomes a powerful, low-cost communications tool to tell your sales or corporate story to millions of people throughout the country... in only 5 minutes.

For information about Modern's markets and opportunities for your 5-minute Digests, contact your producer or write for "The Facts about 5 Minute Films." Modern Talking Picture Service, Inc., 1212 Ave. of the Americas, New York, N. Y. 10036.

### San Francisco's Festival Invites "Film as Communication" Entries

The San Francisco International Film Festival (Oct. 20-30) will feature a Competition Division for industrial and experimental films and for both TV documentary and entertainment films. According to Carson Magill, senior vice-president and general manager, McCann-Erickson, Inc., San Francisco, who is serving as chairman of the Festival's Competition Division, these films will be judged in non-public screenings and the winners presented to the public during the Festival.

Institutional, commercial and educational films are included in the Film as Communication category. Stewart Macondray, vice-president, W. A. Palmer Films, is chairman of this group and Richard Fowler, president, Vista Productions, is vice-chairman.

August 1 is the deadline for Film as Art and Film as Communication entries. If you need entry forms write: San Francisco International Film Festival, 420 Montgomery St., San Francisco, Cali-

forma 94104 or telephone (415) 392-4511.

### Mel London Joins Wolper Group as V.P. of Industrial Division

Mel London, former head of the International Division of Wilding, Inc., has been named to the newly-created post of vice-president of the Industrial Film Division of Wolper Productions. His appointment was confirmed on July 11 by M. J. (Bud) Rifkin, executive vice-president of Wolper and president of Wolper Television Sales.

London is credited with numerous award-winning motion pictures, produced for leading industrial firms in more than 35 countries. His film, *To Live Again*, was nominated for an Academy Award in 1963. Before joining Wilding, he was executive producer with Transfilm-Caravel in New York and held the same post at On Film, Inc. Born in New York City, he was educated at City College and Columbia University.

London's appointment emphasized the continued broadening of Wolper Productions' activity into television network programming, live and filmed television specials, syndication and industrial films.

### National Film Board Takes Top Honors at Canadian Film Awards

The 18th Annual Canadian Film Awards were presented at the Queen Elizabeth Hotel in Montreal on May 6th. A notable first included live television coverage by the Canadian Broadcasting Company for the full 9:30 to 11:00 P.M. time period.

Canada's "Film of the Year" honors went to a CBC film, *The Mills of the Gods: Viet Nam*, directed by Beryl Fox. A special award for combined color and black & white photography went to a National Film Board picture, *Un Jeu Si Simple*, directed by Giles Groulx. Two Moreland-Latchford Productions' (*Shell 4,000-1965* and *Canadian Industries Limited*) received top honors in the Sports and Recreation and Sales and Promotion categories.

Chetwynd Films Ltd. took top honors for Public Relations films for their picture, *Light for the Mind*. Sharing Training and Instruction category honors were *The Scribe*, produced by Film-Tele Productions and *Decision*, produced by Westminster Films Ltd.

Another National Film Board production, *The Railroad*, won first place for Travel and Tourism films and the Board also scored

top honors in Experimental Film with *Syrinx* and the Children's Film, *Above the Horizon*. Feature Film winner was so Film Board production, *Le est Des Morts*.

The Association of Motion Picture Producers and Labor of Canada was official host for these 18th annual awards.

### Calvin Officials Study 8mm Film Developments on Visit to Japan

President Leonard Keck of Calvin Productions, Kansas City, returned with vice-president B. Hedden from an extended trip to Japan. They carried with them briefcases detailing the current state of 8mm sound in that country. We hope to report on their findings in these columns the months ahead.

### Elect Graeme Fraser V.P. Canadian Public Relations Society

Graeme Fraser, long active in public relations and advertising affairs of Canada, has been elected first vice-president of the 30-member Canadian Public Relations Society. The vice-president of Crawley Films Limited is also president of the Federation of Canadian Advertising and Sales

## World's Best Industrial Pictures to Compete at Venice

**I**NDUSTRIAL FILMS selected by national juries throughout Europe and in the United States and other lands worldwide will compete for international honors September 13-18 when the 7th International Industrial Film Festival is held in Venice, Italy. Host for this year's events in that historic city by the sea is the Italian Confederation of Industry, serving on behalf of the Council of Industrial Federations of Europe under whose auspices the Festival is organized.

All films shown at Venice are presented through industrial federations of the entering lands (or similar organizations). U. S. entries, for example, are submitted by the National Association of Manufacturers. Each country may present a maximum of 15 entries but not more than four in any of the seven festival categories. These categories are defined below:

Sr. Giacomo Guiglia, of the Italian Confederation's secretariat (official host at Venice) has defined the festival's objectives:

(1) to furnish a panorama of industrial activities and of the progress made in production, research and management by industrial organizations;

(2) to show the position of industry in a free society and the social problems which are involved;

(3) to stimulate, through international competition, the production of industrial films of the highest quality, and

(4) to evoke closer collaboration between countries through showing of the industrial progress which each has achieved.

The working press of many countries covers this event. At last year's festival, in Rouen, France, both daily newspapers and business journals from throughout Europe were represented and an International Press Award was presented to one of the category winners: *The Lorth Road Bridge*. Representatives of major management were also present as well as the heads of European industrial federations.

Through the cooperation of our correspondents and friends abroad, **BUSINESS SCREENS** is privileged to present first lists of international entries from Belgium, Britain, Finland, France, the Netherlands, Sweden, and Spain

as well as U. S. entries. Here are the first entries for this important international competition at Venice:

### ENTRIES FROM BELGIUM

(Category designations not identified)

**Autocritique.** Sponsor: Ministry of Transport. Producer: Belgique Cine Publique.

**Puissance et Automatismes.** Sponsor: Ateliers de Constructions Electriques de Charleroi. Producer: SOFIDOC.

**Du Choix des Procédés a la Reception des Combustibles Irradiés.** Sponsor: Eurochemie. Producer: Promineom.

**Des Dangers et des Hommes (Of Danger and Men).** Sponsor: Protection Civile — Ministry of Interior Affairs. Producer: Belgique Cine Publique.

**Les Voyageurs (The Travelers);** Sponsor: BP-Antwerp. Producer: Art et Cinema.

### COMPLETE DESCRIPTION OF CATEGORIES FOR THIS INDUSTRIAL FILM FESTIVAL

**Category A: Industrial Subjects.** Films about industrial questions (Economic, social, technical or scientific) of general interest — for showing to public.

**Category B: Industrial Products.** Films about specific industrial products, materials or projects, intended for showing primarily to the general public.

**Category C: Industrial "Image" Films.** Films aiming less at information than do the films in Categories A and B, but which have the purpose of contributing to the prestige of the organization concerned, intended primarily for the general public.

**Category D: Technical Information.** Films about specific industrial products, materials or projects or about industrial techniques (management methods, measures for increasing productivity, efficiency and output, rationalization, automation, application of modern techniques, etc.) intended primarily for specialist audiences.

**Category E: Industrial Research.** Films on industrial application of scientific principles and research intended primarily for special audiences, including educational establishments, rather than for general showing.

**Category F: Manpower Training.** Films on management and manpower training (vocational guidance and training, training within the firm, etc.) and on manpower promotion and human relations within the firm. Intended for industrial audience, not the public.

**Category G: Safety Films.** Films on accident prevention, occupational diseases, health re-education and measures of social security, intended rather for an industrial audience than the general public.

### Britain Chooses Entries for Venice in National Film Awards Competition

**B**BRITAIN'S National Industrial Film Awards Competition, organized by The British Industrial Film Association and its members of audiovisual and film managers with special concerns in that country, was held in London on May 23-24 at the Shell Entertainment Theatre, S. E. 1.

Miles Pitts-Tucker, chairman of BIFA, announced the selection of the 15 motion pictures which will represent Britain in competition at the 7th International Industrial Film Festival to be held in Venice, September 13-18. The entries to this year's national competition total 152 motion pictures submitted by 89 governmental, business and industrial organizations in Britain. Mr. Pitts-Tucker noted that more industrial films were now being made in that country for specialized technical audiences than for general viewing.

The awards were presented to the winners by sponsors by Mr. Roy Mason, M. P., Minister of State, Board of Trade, at a luncheon held at the Savoy Hotel, Strand, London W. 2, on Wednesday, May 25th. This was an important occasion for the presentation of a new award — the Industrial Film Correspondents' Prize, presented by the vice-chairman of the group, Mr. Brian Watkinson.

Here are the titles, sponsors and producers of the 15 British entries which will compete for that country in Venice:

#### Category A: Business & Industrial Subjects

**Horizons Unlimited.** Sponsors: Foreign Office, Commonwealth Relations Office, Colonial Office and the Association of British Aeronautical Constructors. Producer: World Wide Pictures.

**Why Not Uncle Willy?** Sponsor: Midland Bank Executor & Trustee Company. Produced by Greenpark Productions in association with the Film Producers Guild and Charles Barrer Sons.

\* \* \*

#### Category B: Industrial Product Films

**The Tortoise and the Hare.** Sponsor: Pirelli Tyre Company (GB) Ltd. Producer: Cammel Laird & Brownjohn.

\* \* \*

#### Category C: Industrial & "Image" Films

**Design for Today.** Sponsors: Foreign Office, Commonwealth Relations Office and the Colonial Office. Producer: Associated British Industries.

\* \* \*

#### Category D: Technical Information Films

**Spat System.** Sponsor: GKN Screws and Fasteners. Producer: Rayant Pictures.

**Vauxhall Bedford England.** Sponsor: Vauxhall Motors. Producer: Arthur Wooster.

\* \* \*

#### Category E: Films on Industrial Research

**Distillation.** Sponsor: Shell International Petroleum. Producer: The Shell Film Unit.

**Power from Fusion. Part 2: The Problem of Containment.** Sponsor: United Kingdom Atomic Energy Authority. Producer: G. Buckland Smith, in association with the Film Producers Guild.

**Forward to First Principles.** Sponsor: British Railways Board. Producer: British Transport Film Unit.

There goes another one of our delivery trucks.

DE LUXE . GENERAL  
LABORATORIES INC . FILM LABORATORIES

Venice: La Basilica della Salute

**BRITISH NATIONAL FILM ENTRIES:**  
(CONTINUED FROM THE PRECEDING PAGE SIX)

**Physics & Chemistry of Water.** Sponsor: Unilever. Producer: World Wide Pictures.

**Category F: Manpower Training Films**  
**Work Study in Printing.** Sponsor: British Productivity Council, British Federation of Master Printers and Kindred Trades Federation. Producer: Basic Films.

**Instructional Technique, Part D: Visual Aids.** Sponsor: Ministry of Defence (British Navy). Producer: Stewart Films.

N.B. The director of this film, Richard Need, was awarded the British Industrial Film Correspondents Group Prize for the film which most imaginatively communicated its message.

**Category G: Safety Education Films**  
**The Stable Door.** Sponsor: British Insurance Association. Producer: Ronald H. Riley & Associates.

**The Nature of Fire.** Sponsor: Fire Protection Association. Producer: Kinocrat Films.

**And Then There Was One.** Sponsor: Allen & Hanbury. Producer: Verity Films, in association with the Film Producers Guild.

Other motion pictures which received either silver trophy awards, diplomas or awards of merit in the British National Industrial Film Awards Competition are noted. These were not included among the 15 entries being sent to Venice:

**Project Halton Fields.** Sponsors: Shell-Mex and B.P. Limited. Producer: Guild House Films Limited.

This informative sales promotion film shows the latest developments in domestic oil-fired central heating; the advantages of new systems; techniques and comprehensive facilities of the sponsor's "Designed Advisory Service." Distribution is by private invitational showings only to prospects for the service. Winner of a Silver Trophy.

**The Paper Machines.** Sponsor: Walmsley (Bury) Group Limited. Producer: The Film Producers Guild.

An impression of the men and machines that make a paper machine—the largest and most complex single manufacturing unit in any industry. Winner of a Diploma award.

**Air Age Marketing.** Sponsor: British European Airways. Producer: Verity Films Limited.

Film's aim is to persuade executives to analyse their distribution systems and to ask whether traditional methods of costing and the distribution of their products can be improved by air shipment. (Certificate of Merit Award)

**More Power from Water.** Sponsor: The Ministry of Technology. Producer: Film Workshops Limited.

This picture gives a broad picture of the past, present and future of water power; its special

concern is the method of finding the efficiency of turbines by the use of model testing at the Ministry of Technology's National Engineering Laboratory. (Certificate of Merit Award)

**A Family of Firms.** Sponsor: Thomas Telford Limited. Producer: Verity Limited.

Purpose is to inform people about a wide range of Tilling interests. (Certificate of Merit Award)

**One Man and His Bank.** Sponsor: The Industrial Bank Limited. Producer: David Cobham Productions for Charles Barker & Sons, agency. The film illustrates the various services applied to its farmer clientele by The Industrial Bank. (Certificate of Merit Award)

**ENTRIES FROM FINLAND**

(Category designations not identified)

**Textiles.** 14 min., color. Sponsor: Mevo Oy. Producer: Sektor-Filmi.

**Fazerila.** 14 min., color. Sponsor: Oy Kaikki AB. Producer: Fennada Junior.

**ENTRIES FROM FRANCE**

**Category A: Business & Industrial Subjects**  
**Sud Ouest.** Sponsor: Esso Standard. Produced by S. M. Productions.

**Category B: Industrial Product Films**  
**Exemple La Rochelle.** Sponsor: Simca Automobiles. Producer: Les Films Jean Leherissier.  
**Le Medicament.** Sponsor: Chambre Syndicale Fabricants de Produits Pharmaceutiques. Producer: Les Films du Cypres.

## ARRIFLEX® 16M **ONE CAMERA — CHOICE OF *THREE* MAGAZINES**

You're ready for any assignment with an Arriflex 16M. Just select the film load that's right for the job—big, little or in-between. **One camera—choice of three magazines.** Makes sense. Saves time. Saves money. Typically Arriflex.

**HERE'S HOW.** For short runs—hand-held grab shots and greatest mobility—there's the compact 200 ft. magazine. For runs of hundreds-of-feet, and most professional jobs, use the capable 400 ft. magazine. These magazines use 200 ft. and 400 ft. core-wound film and 100 ft. and 200 ft. daylight loading spools respectively. And for the really long run jobs, there's the big-capacity, 1200 ft. magazine. Co-axial design gives it excellent balance and handling ease. Locks onto the camera as easily and quickly as the other two. Uses 1200 ft. core wound film—33 minutes film running time.

**BEST OF ALL:** All three 16M magazines are gear driven, have a built-in sprocket and preformed film loop system. These advantages provide the sturdiest, most reliable quick-change system available today. The best system, because it locates the entire film gate (aperture, side pressure rail and rear pressure plate) all safely in the camera head for maximum precision and maximum reliability. In addition, this professional feature keeps the cost of the magazines low—important savings for you when your filming needs call for more than one magazine.

The Arriflex 16M wide choice-of-magazines concept and Quick-Change system are but two more proven professional features of this distinguished camera—in good company with its mirror-shutter reflex system, registration-pin movement and the many other famous Arri features. On your next assignment, shoot with an Arriflex 16M. You can't miss.

**YOU'D BE SURPRISED AT THE VARIETY** of filmstrips we make at CFI. Our customers don't wait for that special sales meeting—they find a well-planned filmstrip solves many a problem, most any day of the week. *New client to impress? Sales force to train? Introducing a new product? Pep talk to the staff? Is a filmstrip the answer to your particular problem?* Let the experts at CFI help you decide. Bring us your material, tell us your objectives, and we'll give you our honest opinion. If a filmstrip is called for, we'll help organize your existing material for best sequence and maximum impact. We'll shoot your maps, the president's picture or other flat art up to 24" x 32" (32 field). Our art department will design and execute original frames as needed. *Want your sales message to read over a special background?* Can do. We set type on cell overlays or even hand letter your logo. *Need a 3-dimensional product shot?* We'll photograph it on a color background right into your filmstrip. *Have some transparencies you'd like to use?* We shoot originals ranging from 35mm through 8 x 10 with no intermediate reduction step to cause loss of detail or color. And at CFI, no matter what the subject, you're always sure of the quality of your filmstrip. Special lighting insures faithful color rendition with minimum contrast gain. And our unique continuous-loop printing equipment assures you absolutely uniform filmstrip prints from scratch-free negatives. *How long for a top-notch filmstrip?* Normal delivery is one week at CFI, but on rush jobs we'll work with you to meet a tighter deadline. Don't keep your problems to yourself! Call Lou Livingston at HO 2-0881.

*Your filmstrip benefits from the superior facilities and technology that have been developed to meet the high standards of the motion picture industry.*

# Q: How would you advertise a brand-new camera?

at long last... a budget-priced 16mm  
**PROFESSIONAL  
MOTION PICTURE CAMERA**

**doiflex 16**

**F&B/CECO!**

Neat!... But the price tag is too small.

This is it! The dream camera!...  
A professional 16mm. motion picture  
camera at a fabulous price:

**\$ 895**

**doiflex 16**

**F&B/CECO!**

Not bad! It features the really low,  
low price, but is it too "bargain-  
basement?" Which comes first... a  
camera's quality or its price?

**IN MANY, MANY YEARS WITH THE BEST  
MOTION PICTURE EQUIPMENT... F&B/CECO  
HAS NEVER OFFERED A MORE IMPRESSIVE**

**doiflex 16**

**F&B/CECO!**

The only one who liked this ad was  
the boss. Overruled!

Attention, Professional  
Motion Picture  
Camera Men

Here at last is  
the Perfect  
"Second Camera!"

**doiflex 16 only... \$895**

**F&B/CECO!**

The Avis technique... people are get-  
ting tired of "second best"... besides,  
the Doiflex 16 is as good as the NUM-  
BER ONE camera!

those  
japanese engineers  
speak  
our language!

**doiflex 16**

**F&B/CECO!**

High class! Lots of white space! Soft  
sell!... But we can't afford it at these  
prices!

american  
know-how  
and  
japanese  
economy  
combined  
in a  
camera!

**doiflex 16**

**F&B/CECO!**

True enough! F&B/Ceco worked with  
the Doi company over a year in design  
and engineering... but the double  
cliché does sound corny.

No matter what layout you use, you can't fool a pro...and our pro customers insist on these features in any camera, regardless of price.

# **doiflex 16** at \$895

*includes:*

Thru-the-lens full reflex viewing.  Precision registration pin, pull-down claw movement.  Positive closing disc shutter with reciprocating reflex mirror. **If Plio-Magic can save you 65%  
on shipping one reel of film,**

**imagine how much you'll  
save with our new multiple-reel cases!**

Now you can ship 'em two, three or four at a time in handsome Plio-Magic molded cases. New improved Plio-Magic material makes them even more durable, lighter in weight than ever before. And you get moisture and dust-resistant protection, **without the need for cans**. What's more, Plio-Magic can't rust, crimp, bend, chip or discolor. And there's a new gentle-action to the exclusive Plio-Magic Positive Locking System. Just a twist of the wrist eliminates unwieldy belts and buckles forever.

Plio-Magic cases are supplied in 1, 2, 3, and 4-reel sizes for 1600 foot reels; 1 and 2 reel sizes for 1200 foot and 2000 foot reels; and in 1-reel size for 400, 600 and 800 foot reels.

Available in a wide range of colors, with custom imprinting, if desired. Write today to Dept. BS-7 612 Boulevard East, Weehawken, N.J., for money-saving PRC data kit.

**SECOND INTERNATIONAL  
CONFERENCE AND EXHIBIT**

— *Ask us for it.* It describes a new type of conference which is arousing great advance interest in industry, government and academic circles. Called The First Practicum in Educational Technology, it will take place August 9-12, 1966, at the Americana Hotel in New York City. Under the chairmanship of Dr. Ralph W. Tyler, an outstanding roster of authorities from all fields and applications will offer presentations, clinics, small-group discussions on such important and practical topics as:

- |   |  |
|---|--|
| <ul style="list-style-type: none"> <li>• Computer-Assisted Instruction</li> <li>• Training Teachers to Cope with Change</li> <li>• The 8mm Revolution</li> <li>• Instructional Television in Industry and School Workshops</li> <li>• New Directions for Programmed Instruction</li> <li>• The "Knowledge Industry" as a Business Investment</li> </ul> | <ul style="list-style-type: none"> <li>• Fundamental Requirement: A Business-Industry Partnership</li> <li>• Training Teachers for Retraining</li> <li>• The Need for Continuing Education for Engineers</li> <li>• How to Win Education's Campaigns</li> <li>• Dial "E" for Education — The Current Position of Audio-Visual Information Retrieval Systems</li> </ul> |
|---|--|

Concurrent with the Practicum (and closely integrated with it) will be an extensive Exhibit of Educational Technology, to run August 9-11. Here, over 80 leading innovators and manufacturers will show methods, tools and techniques available now for solving problems in education, training and retraining. Many new products will be exhibited for the first time.

We believe this will be an important and memorable event. You are invited to participate.

To make sure the booklet reaches you, write or call directly:

## Change films in 2 seconds flat!

Read how Fairchild's amazing new MoviePak cartridge multiplies the value of your entire sound film program

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play. In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training classes. In the boardroom. To switch instantly to another film, just snap out one cartridge, snap in another.

Every film you have can be easily converted to 8mm and threaded into the MoviePak cartridge. Duplicate prints are less expensive than 16mm, too. Now you can unleash the full power of your entire sound film program.

The Fairchild Mark IV projector is portable, weighs only 20 pounds and is always ready for action. No warm-up time required.

For display use, it will run without supervision, repeating automatically. It takes up to 22 minutes of film with a single MoviePak.

To see for yourself, just send in the coupon.

October 13-14, 1966 are the key dates for this 6th Annual INTERNATIONAL FILM & TV FESTIVAL, to be held at the Americana Hotel in New York City.

From its modest inaugural as an adjunct to the Industrial Film & Audio-Visual Exhibition, the Festival has blossomed into a hardy and healthy perennial during its amazing 5-year span—showcasing the finest in films for business, education and television.

In specially-designed categories, the Festival runs the full gamut—from divergent Industrial Films and TV Commercials—to Public Service Television Programs.

Film-making has long been a widely-recognized servant of entertainment, education and of industry. The advent of television has opened new vistas of worldwide communication. And now, among countless thousands of companies and trade groups, the use of films for selling, public relations, training and export promotion is rapidly expanding to help achieve new, resultful goals.

This is the purpose of the Festival: to encourage and reward those individuals and companies instrumental in further-

ing the development and progress of the filmed media.

The Film & TV Festival of New York has earned worldwide recognition—respected acclaim from city and state officials, representatives of governments abroad, advertising and public relations agencies—and of the "Fourth Estate" as well.

The Festival demonstrates its significance by the emergence of inter-changing views—praise and controversy—support and criticism—sharing of attitudes and beliefs. Each year, producers and sponsors, agencies and those who work in allied fields, as well as overseas personalities, are among the thousands who attend its screenings . . . workshop sessions . . . seminars . . . open forums and receptions.

A panel of prominent judges will evaluate all entries—and prize-winning films and commercials will be awarded medals which measure their merit.

This year's Festival will once again recognize and reward those individuals and companies whose continued efforts are helping to broaden the horizons of the film medium. Entries are now being invited for this 6th Annual event.

THE EDITORIAL VIEWPOINT

SHOWMANSHIP IS GOOD PROJECTOR

**B**USINESS PLANNING for strenuous fall and winter marketing and training programs involving a wide range of audiovisual projection equipment dictates the annual mid-summer preview of motion picture, video, slide, filmstrip and overhead projectors and their related accessories in this issue.

These Equipment Tradefair pages highlight machines featured at current exhibits, such as the National Audio-Visual Convention now in Washington, D.C. More than that, however, they provide focus on trends, perspectives on the ideas which motivate choice of equipment and put emphasis on the standards which guide the business-industry buyer.

What is the "State of 8?" What about the more than half-million 16mm sound projectors out in the field? New low-cost videotape recorder-playback units have proliferated in recent months. What are their advantages as well as their shortcomings?

Business will use those tools which meet specific meeting and training requirements. Business will insist on quality of manufacture: sturdiness as well as simplicity of operation. And business will take careful note of nationwide service facilities which assure continued field operation of projectors used by dealers, branches and distributors. Look to pages 56-61 for helpful guidance.

Associates, Friends Honor "Pete" Peterson on Retirement from American Oil Company

For more than three decades, Olive H. (Pete) Peterson has been a leading exponent of audio-visual communication in business and industry. On July 15, our good friend and fellow member of the Industrial Audio-Visual Association, began a new "career" as he commenced normal retirement after almost 33 years with the American Oil Company, leaving his position as production manager of sales promotion and merchandising services in the company's Chicago headquarters' organization. Professor Peterson and business friends honored Pete with "The Best of O.H.P." at a presentation on the evening of July 8 at the Pick-Congress Hotel.

A college professor in education and psychology and high school teacher of chemistry and physics, Pete joined American Oil in 1933 as a sales promotion supervisor. We first met him as program participants at one of the E.V.A. Corporation's famed Visual Education Forums in the late 30's, when BUSINESS SCREEN was a lusty but new-born infant publication. Pete, an outspoken advocate of the "best and the most" in audiovisuals was to become a fast friend.

Within a few years, luncheons and dinners with Pete and the late Bill Bastable, "ed" Hogan (Kraft Foods) and a few other av-

## SCREEN EXECUTIVE

### Du Pont Appoints Joseph Dallas General Manager, Photo Products

Joseph A. Dallas has been named general manager of the Du Pont Company's Photo Products Department. The former assistant general manager succeeded Harlan L. Graham in that post on June 9.

Dallas joined Du Pont as a chemist at the Repauno Works, Gibbstown, N. J., in 1934. In 1942 he became superintendent and later assistant manager of the Wabash River Ordnance Works, Newport, Ind. In 1944, following his transfer to Wilmington, Del., he filled a number of management posts until his appointment in January, 1964, as assistant general manager of the Photo Products Department.

Dr. Phillip J. Wingate, former assistant general manager of Du Pont's Elastomer Chemicals Department, was named to the same post in the Photo Products Department on June 21. Dr. Wingate has been with Du Pont since 1942 when he joined the company as a research chemist at the Jackson Laboratory, Deepwater, N. J. •

\* \* \*

### Elect Kurt Kanis, Albert Landers as Vice-Presidents of DeLuxe Lab

Kurt E. Kanis is now vice-president for New York Operations and Albert R. Landers a vice-president for West Coast Operations of DeLuxe Laboratories, Inc. Election of both men to these posts was confirmed by the company's board at its meeting in New York City on June 8.

According to DeLuxe president G. Carleton Hunt, both men will be responsible for production output, quality control, engineering, and research and development. Kanis was previously sales manager for the DeLuxe plant in New York. Landers was West Coast production manager in charge of the DeLuxe and General Film Laboratories' plants in Hollywood.

The board also confirmed the election of Norman Stein, controller for DeLuxe, as assistant secretary of the corporation. •

\* \* \*

### Bill Fernim Is Named Manager of TV Sales for Sarra-Chicago

Former artists' and photographic representative Bill Fernim has joined Sarra-Chicago, Inc., as sales manager of that company's expanding television commercial activities. He will service advertising agency clients. •

JHO director: Harold Dash

### Harold Dash Elected to the Board of The Jam Handy Organization

The election of Harold Dash to the board of directors of The Jam Handy Organization was confirmed at the company's recent annual meeting in Detroit. He is a vice-president of the Organization and is in charge of western operations from his Chicago office at 230 N. Michigan Avenue. His family residence is in Evanston, Illinois.

\* \* \*

### Berkey Appoints Joseph N. Tawil Lighting Specialist for ColorTran

The appointment of Joseph N. Tawil as eastern market manager for motion pictures and television specializing in the application of ColorTran lighting equipment was confirmed last month by Harold L. Parker, vice-president of Berkey Technical Corp., parent firm of the ColorTran company.

As a lighting specialist in the Eastern U. S., Tawil's services will be available for technical consultation as well as development and sales of lighting systems. A student of stage lighting at Carnegie Tech, Tawil has had extensive stage and television lighting experience. He can be reached at Berkey Technical Corp., headquarters in Woodside, N.Y.C.

## ARRIFLEX at work — ONE OF A SERIES \*

Photograph by Hella Hammid

Francis Thompson and Alexander Hammid Shooting "To Be Alive"

### ARRIFLEX<sup>®</sup> filmed Johnson's Wax World's Fair cinematic masterpiece "TO BE ALIVE"

Inside the Johnson's Wax "Golden Rondelle" at the World's Fair, is 17½ minutes of sheer delight... the extraordinary 3-projector, 3-screen color film, "To Be Alive,"... so sensitively and imaginatively produced by documentarians Francis Thompson and Alexander Hammid. Among Fair visitors, film critics and publications like Time Magazine, the opinion is unanimous... **there's nothing better to be seen at the Fair!**

Typical of the accolades given "To Be Alive" was Columnist Archie Winston's full column commendation in the New York Post, lauding the film as "a completely integrated work of art... a film masterpiece."

"The world of design, moving towards abstraction, is here," he wrote. "The world of personal intimate portrait is here. The photography is grand enough to make a melodrama out of the passage of a centipede, human enough to translate a boy's roller derby into a thrilling road race, or to understand the contemplative beauty of Walden's pond. From universe to frog, from stick-beating Africans to dancing American teenagers, to the world viewed in prism colors... it's all here, spilling over with

the life, emotion and happiness of existence."

"To Be Alive" encompassed 18 months of shooting in Europe, Africa and the United States. But long before the film makers set out on their cinematic safari, basic problems of the triple camera set up had to be solved. It was Mr. Hammid who designed the camera rig with the three Arriflex 35's mounted on a single pedestal. Each camera is driven by a standard Arriflex constant-speed motor.

Selection of equipment was an important factor. "We expected to travel a great deal for the production of our three-screen film," Producer Francis Thompson explained, "and to work in remote areas where the triple camera would have to be carried considerable distances and set up rapidly for unexpected opportunities. Our camera system had to be light, compact, rugged and reliable even in adverse climates because the precision matching of the three cameras prevented us from interchanging any one of them with a spare. Moreover," he added, "We wanted a camera with which cameramen the world over were familiar. We chose Arriflex."

THE AMERICAN MANAGEMENT ASSOCIATION ANNOUNCES

## A Practicum on Educational Technology

Discuss "Educational Realities" August 9-12 at Americana Hotel in New York

EDUCATION IS A MAJOR CONCERN of the U.S. and its neighbors abroad. Meeting the challenge of swiftly-advancing technologies and an increasing supply of manpower in an era of diminishing distances between the continents has placed new emphasis on both tools and techniques for educators and trainers.

A very broad "overview" of these problems and potentials will be provided from August 9th through the 12th when the American Management Association mounts its second international conference and exhibit on Education and Educational Technology. Sessions will be held at the Americana Hotel in New York City. Like the AMA's first conference, this year's event will feature a host of speakers — over 120 of them — for the benefit of its primary participants: managers, educators and trainers from industry, government and the academic community.

This year's conference is billed as a "practicum" and its theme is broadly defined as "Educational Realities — the Tools and Requirements for Progress." Featured speakers on the advance program include: Ralph W. Tyler, Chairman, Center for Advanced Study in Behavioral Sciences; Harold Howe II, U. S. Commissioner of Education; Lt. General Thomas S. Moorman, Superintendent, U.S. Air Force Academy; and Lee Deighton, Chairman of the Board, The MacMillan Company.

Last year's program attracted some 1,700 registrants — about half of them from industry; half from the school plant and a sprinkling of managers from government. An even larger registration is anticipated this year as such program topics as The Tools for Progress, Training Teachers to Cope With Change, The Quest for Leadership and Excellence, Tools and Requirements for Progress in Training, The New Look in Industrial Training, Training Executives to Manage Change, and The Fundamental Requirement: a Business-Education Partnership — are all to be discussed.

### Tools and Requirements for Progress

The subject, "Tools for Progress" is in the capable hands of such panelists as Michel Beilis, National Coordinator for Communications Systems for Education, TV and University Research at AT&T; Robert L. Hillard, Chief, Educational Broadcasting of the FCC; Jerrold Kemp and Richard Lewis, San Jose State College; Gordon Rhodes, Training Director, First National City Bank; and Adrian Terlouw, Coordinator of Educational Services at Eastman Kodak.

Each of these program subjects features a panel of authoritative leaders in their respective fields. Evening sessions will be devoted to "talk-back" discussions, where registrants will meet with speakers of day sessions and with other registrants. Audiovisuals are to play

a key role, both in program structure and content, throughout the sessions.

### Audiovisual Leadership Is Represented

Other participants with audio visual competence include: Philip Lewis, Director of Research, Development and Special Projects, Chicago Board of Education; and Charles B. ... President of Encyclopaedia Britannica. Charles F. Schwep, creator and designer of the first conference (and previous AMA sessions on programmed learning, was again retained to develop this year's event. More than any other individual, he is qualified to answer the many questions regarding structure and content which BUSINESS SCREEN readers would raise. We put these to him in a recent interview session which reveals many facts about what promises to be a most informative "overview" of modern education and its business industry relationships.

### Q. Why Are You Not Calling This a Conference?

Schwep: We prefer to think of it as a "practicum" — a dusty word from the archives of the academic community which implies an event or experience which is abundantly practical. We are trying to avoid generalities and get down to hard-core practicalities. We want to provide an effective learning experience for registrants so that when they return to their jobs they will have information, knowledge and insights which they can use at once.

### Q. Who Will Be Going to the Practicum?

Schwep: We are trying to bring together managers and trainers, policy makers and prime movers from industry, the academic community and government who must together develop effective and continuous communication and cooperation if indeed we are to solve pressing problems in education, training and retraining.

### Q. To What Kind of Communication Do You Refer?

Schwep: The exchange of practical experience between the three groups as it relates to knowledge about learning and learning theory; ... (CONTINUED ON THE FOLLOWING PAGE 28)

## The operation was a success... but the patient died

You, too, can lose "patients" through small detail . . . such as titles not up to the standard of the rest of your production. Guard against loss of clients by protecting your large investment in time and money by a very small investment in Knight titles.

EDUCATIONAL TECHNOLOGY UPDATED:

(CONTINUED FROM THE PRECEDING PAGE 26)  
relates to the use of new methods, techniques and tools; even as it relates to defining objectives.

This becomes increasingly important as research and development by industry relates directly to training and the requirement for the continuous education of management. In addition, every resource and capability must be put to work to more effectively and efficiently cope with the problems of the disadvantaged and the underdeveloped nations.

Q. To What "Pressing Problems" Do You Refer?

Schwep: Most fundamental is the problem of coping with change itself. The knowledge explosion has placed managers in the new and unfamiliar position of having to adapt themselves to new techniques and procedures as well as complex, new, decision-making processes, without advance understanding.

The ability to adapt swiftly and surely to new surroundings and change as it accelerates, is a major problem for all trainers — and executive officers as well. Training, retraining and/or continuing education have become fundamental requirements of corporate enterprises. In addition, communications itself is a new problem area; and solving this requires learning as well as new techniques.

Q. How Does All This Relate to Academicians — to the Teachers in our School Plant?

Schwep: Teachers face the same basic problems — and many more. The qualitative as well as quantitative need for more and better learning has created problems which can be solved in part only by the proper understanding and application of new tools, techniques and methods of learning. Especially, perhaps, teaching which is learner oriented, and individualized.

Q. You Are Discussing Lofty Ideas and Ideals . . . How Can You Develop This Material in Such a Way That it is Entirely Practical?

Schwep: That's a good question — and a tough one. First of all, we have attempted to select a hard core of professionals from the industrial and business community, from the academic community and from government able to deal with the range of practical problems which confront us — and individuals who have done so at a working level.

Secondly, we are structuring each program element so that we avoid philosophy and theory and concern ourselves with realities. Each presentation will generalize by means of specific case histories; and each presentation case history will be so developed and presented that its broad implications — in a pragmatic manner — can relate to a broad range of problems.

Finally, we will provide substantive material in the form of detailed papers, so that registrants will have ready access to specific information which they can adapt to their own needs.

Q. Tell Me More About Your Methodology — How You Propose to Communicate With Your Audiences?

Schwep: This year we are making detailed plans to use the tools of the technologies of education and communications throughout the entire event and with optimum benefit. In fact, we cannot succeed without the proper use of new technologies.

Accordingly, motion pictures, slides and other projectuals are now being designed especially for at least 30 program elements. In addition, we are preparing "position papers" for advance mailing

to registrants; supplementary materials for distribution during the event and we will be introducing new convenience copying devices for registrants may even copy transparencies of our material for their purposes.

Q. Your Program Appears to be Terribly Busy. You Have Important Program Elements Running Concurrently. Will You Not First Attend to the Manager Who Wishes to Attend Concurrent Sessions?

Schwep: No. We are planning a unique system whereby major concurrent sessions will be recorded on audio tape and played back with the benefit of compressed speech which will help comprehension while simultaneously substituting reducing playback time. Also, some program elements will be recorded on video tape and played back during an open period where registrants can tune in on that lost session.

Q. With an Audience as Large as You Anticipate, How Will it be Possible for Registrants to Actually Participate or Ask Questions?

Schwep: We are developing new uses of video recording for this purpose; planning to provide questions for overhead projection; and providing evening, informal "talk-back sessions" where small groups may meet and discuss their problems personally with the speakers.

Q. Are Your "Problem-Solving Clinics" Structured for Small Groups? I See You Have About Thirty-Five of Them Scheduled for Thursday Morning.

Schwep: These sessions will be limited to thirty registrants at the most. In the event registration requires it, in some cases, we will structure duplicate sessions.

Q. Do You Anticipate That Most Registrants Will Attend the Entire Three and a Half Days?

Schwep: Perhaps one-half. Many will examine the program and select one or two days which relate most directly to their needs. In some cases, I imagine, companies may send several individuals who together will cover the entire event yet no one will attend all four days.

Q. If I Had Responsibility For Training in a Large Industry, How Would You Suggest I Participate?

Schwep: This would depend upon your specific requirements. I would hope you would attend the first, general day. Certainly, the afternoon session's "Tools for Progress" would be important. It will be a dramatic, fast-moving, review of the present and future state of the art developed in

## EDUCATIONAL TECHNOLOGY UPDATED:

(CONTINUED FROM THE PRECEDING PAGE 28) a framework relating to systems design and based upon the pragmatics of learning and learning theory.

I would attend the Wednesday sessions, electing either "Tools and Requirements for Progress in Training", which will detail five specific case histories, or "The Quest for Leadership and Excellence"; Wednesday afternoon, "The New Look in Industrial Training" or "Training Executives to Manage Change." Of course, visit all the exhibits, which are very much a part of this event.

On Thursday morning, I would elect one of the fourteen clinics and that afternoon "The 8mm Revolution" and "Improving Learning in the Industrial Program" or "Continuing Education for Engineers" or "Broadcast Communications."

And that evening I would either arrange informal discussion with my peers or attend one of the ten workshops — probably Jacques Parent's single concept film workshop. If I were involved with public affairs and or the requirement for practical politics, I would attend the Friday morning, half-day session devoted to practical politics.

**Q. I Note Your Speakers Include the Commissioner of Education, a Number of Outstanding Educators and Government Officials. Whom Do You Have From Business and Industry Who Can Provide the Hard-Core Content You Refer To?**

**Schweg:** Dugan Laird of United Air Lines is Chairman of one session; "Cap" Palmer of Parthenon Pictures; William Smith of Xerox; Lawrence O'Donnel of Dupont; Michel Beilis of A.T.&T.; Ralph Grubb of IBM; John Guy of State Farm Insurance; Gordon Rhodes of First National City Bank; Virgil Day of General Electric; L. W. A. Campbell of Tennessee Gas Company; Nat Myers of Fairchild; a whole team from TWA; and many others.

**Q. What Will There Be That Is Really New?**

**Schweg:** A whole gamut of methods, techniques and tools including new films, the first public demonstration of the Ampex 6000 videotape recorder, the Olivetti Cippia II, multiple use of compressed speech, new audiovisual devices, an exposition of new dimensions for home study — and much else, including the premier introduction and use of a 4¢ teaching machine or audience response device. And I believe that a number of major exhibitors are planning to introduce totally new products and services at this event.

**Q. How Many Exhibitors Will You Have?**

**Schweg:** Just about 30,000 square feet of them. More companies will display more material than they did last year and we are integrating the exhibit into the Conference proper. And this year, also film producers.

**Q. Does AMA Plan to Follow up this Conference? Regionally or with Special Events for Particular Audiences? In Other Words, How Will AMA Implement its Own Activities in This Field?**

**Schweg:** Since AMA recognizes that modern technological advances in today's business and industrial atmosphere pose new problems for management, dissimilar to previous times; and since AMA recognizes the responsibility of management in education for the future as well as training for tomorrow, an entire plan of activities is being developed, and I believe that the first phase of new and important activities will be made known at the Conference itself.

## Slides made while you wait. 55¢.

While you wait 10 seconds or 2 minutes.

10 seconds for a line copy slide.

2 minutes for a continuous tone slide.

It's done, as you might expect, with a Polaroid Land camera and Polaroid Land transparency film.

And it's about as easy as taking Polaroid Land snapshots. So, anybody can do it.

All you do is snap the shutter. Pull

the tab. Wait for your picture. Dip it in a hardening solution. Slip it into a snap-together plastic frame. And you've got a slide ready for immediate projection.

The type of film you use depends on the particular kind of slide you're making. To make a line copy slide like you see here, you want to use PolarLine Type 146-L transparency film. It's especially for line copy work.

For continuous tone work, there is

Type 46-L Polaroid Land Projection Film.

Both kinds of film make slides that fit any standard lantern slide projector. Both can be used in any Polaroid Land camera that takes Series 40 film, except for the J-65.

Both films make slides that are sharp, brilliant, and free of grain.

And they do it for less than what you pay for conventional slides.

Or just about 55¢.

**Polaroid Land Transparency Film**

General Offers Awards  
 Technical Development Papers  
 technical developments in  
 pictures have had the most  
 effect on the growth of  
 motion picture industry? The  
 answers to that question can  
 be found in one of three cash  
 prizes offered by DeLuxe and  
 Technical Film Laboratories. De-  
 Luxe is offering \$500, \$300 and  
 \$100 for the three best lists of the  
 outstanding developments in  
 the history of motion pictures and  
 technical developments — in 100 words or less —  
 the selection of each develop-  
 ment.

Lists may include develop-  
 ments from any area of motion pic-  
 ture photography, editing, spec-  
 ials, effects, etc. and may be tech-  
 nical innovations or developments  
 introduced to the industry during  
 any period of its history. Winning  
 entries, according to DeLuxe, will be  
 selected from entries which are the  
 most complete and significant and  
 accompanied by the best reasons  
 why the developments chosen  
 are significant. The contest, which  
 closes August 15, is open to any-  
 one in or out of the motion picture  
 industry (excluding DeLuxe em-  
 ployees). Complete rules and  
 entry details may be obtained by  
 writing Technical Developments  
 Contest, P. O. Box 3226, Holly-  
 wood, Calif. 90028.

Directors Approve Acquisition of  
 Sawyer's by General Aniline Co.  
 J. Jesse Werner, chairman  
 and president of General Aniline  
 & Film Corporation and Robert  
 J. Frost, president of Sawyer's  
 announced (in mid-July) that  
 the boards of both companies have  
 approved in principle the proposed  
 acquisition of Sawyer's by GAF.  
 Contingent upon the approval of  
 a final agreement by the share-  
 holders of Sawyer's, that company  
 will be operated as a wholly-  
 owned subsidiary, headquartered  
 in Portland, Oregon.

Free Loan Titles Listed in  
 Modern's 1966-67 Film Catalog  
 A new 1966-67 catalog listing  
 16 16mm motion pictures avail-  
 able to schools, plants and offices,  
 and religious, civic and social  
 organizations, has been issued by  
 Modern Talking Picture Service,

**Perspective on Race Relations:  
 Lutheran's "A Time for Burning"**

☆ A new motion picture on race  
 relations, commissioned by the  
 Lutheran Churches of the United  
 States, has just been completed  
 by Quest Productions, of New  
 York. The one-hour dramatic  
 documentary was filmed in Omaha  
 and reveals various communities  
 within the Nebraska city, both Ne-  
 gro and white, reacting to contem-  
 porary social pressures and  
 changes. The scenes in the film  
 were neither scripted nor staged.  
 No professional actors were em-  
 ployed. All of the incidents were  
 photographed as they actually oc-  
 curred, with the knowledge and  
 consent of the participants.

*A Time for Burning* was offi-  
 cially approved and accepted on  
 June 10th by the executive com-  
 mittee of Lutheran Film As-  
 sociates, the production agency  
 representing the three major U.S.  
 Lutheran branches and the Na-  
 tional Lutheran Council.

The setting for most of the  
 film's action was Augustana  
 Lutheran Church in Omaha, a  
 congregation of the Nebraska  
 Synod of the Lutheran Church in  
 America. Other Omaha churches  
 cooperating in the filming were  
 two with predominantly Negro  
 membership: Calvin Memorial  
 Presbyterian Church and Hope  
 Lutheran Church.

A cinema verite technique was  
 utilized by producer-director-cam-  
 eraman William C. Jersey to de-  
 pict the real happenings in Omaha  
 on film. Mr. Jersey explains that  
 the individuals being filmed tend  
 to lose their shyness before the  
 hand-held camera and portable  
 recorder when they get involved.

According to Robert E. A. Lee,  
 executive producer and IFA offi-  
 cial, *A Time for Burning* is the  
 "actual portrayal of a community  
 in struggle to establish meaningful  
 communication amidst tension —  
 not that wrought by violence and  
 exploding emotions, but rather the  
 clash of ideas, the anguish between  
 doubt and conviction, inaction and  
 action." Distribution is being set.

# the news perspective

Surveyor Carried Bell & Howell-Designed Lens to Moon's Surface

PROJECT SURVEYOR, which soft-  
 landed the unmanned space-  
 craft on the moon and has suc-  
 cessfully transmitted many close-up  
 photographs of the lunar surface,  
 has won photographic design hon-  
 ors for one of the nation's leading  
 audiovisual equipment makers.  
 A zoom lens designed and built  
 by Bell & Howell enabled detailed  
 close-ups of the lunar surface as  
 close as four feet, providing visual  
 data never before possible.

As the Surveyor touched down  
 on the surface of the moon, the  
 "eye" of the system was activated  
 —with a zoom lens scanning in  
 all directions by means of a re-  
 volving and tilting mirror. A 360-  
 degree circle was made with an  
 additional sweep both above and  
 below the lunar horizon.

Slave motors controlled from  
 earth were able to focus, zoom and  
 adjust the iris of the lens as well  
 as a multi-colored filter wheel.  
 This provided critical focus on  
 the surface and permitted greater  
 detail in the transmitted photos.  
 Surveyor proved to be surpris-  
 ingly durable, resuming picture  
 transmission after a delay which  
 seemed to restore power and was  
 unaffected by extreme temperatures.

Everett F. Wagner, president of  
 Bell & Howell's Photo Products  
 Group and Frank W. Mellberg,  
 Surveyor program manager for the  
 company, cited some of the prob-

 ell's program manager for Project  
 Surveyor, with project engineer  
 Carcin Ellman and scale model of  
 lunar spacecraft. Mellberg's hand is  
 pointing to the camera's special lens.

lems that were overcome. The  
 lens' systems were designed to per-  
 form with maximum efficiency de-  
 spite shock, vibration, radiation  
 and extremes of heat and cold,  
 ranging from 250 degrees Fahren-  
 heit to 250 degrees below zero.  
 Surveyor's ability to resume pic-  
 ture transmission was added testi-  
 mony to the photographic design  
 and engineering skills.

Representatives of B & H work-  
 ed closely with the Hughes Air-  
 craft Company, which designed  
 and built the lunar vehicle, as sub-  
 contractor to the Jet Propulsion  
 Laboratory.

Here is Surveyor: counterpart of spacecraft which successfully transmitted  
 close-up pictures of moon's surface, is pictured near Hughes Aircraft Com-  
 pany plant in Culver City, Cal. where it was built. White turret at left  
 of mast houses television camera with special zoom lens designed by Bell  
 and Howell. The lens operated perfectly despite extremes of heat and cold.

SUMMER, 1966

## Family Relations, Marriage and Sex Education Films 'Most' Needed, Say Home Economists

### New Film on Menopause Available to Groups

National magazines and newspapers have recently called attention to new medical attitudes toward the female menopause. Now, an authoritative motion picture, "A Changing View of the Change of Life," is available to women's organizations, industries, schools and clubs.

The 28-minute color film is presented as a public service of the Wilson Research Foundation. Its purpose is to inform women that the menopause is not "inevitable" but a recognizable deficiency disease brought about by an imbalance in hormone production. The film is based entirely on information reported in leading medical journals.

*(Continued on Page 4)*

There is a most important need for more films and filmstrips on family relations, marriage counseling and sex education, according to the nation's home economics teachers.

The results are published in a nationwide survey of home economists in education just completed by Association Films. The purpose of the survey was to find out in which areas of the curriculum more business-sponsored films and filmstrips are needed.

Family relations films were cited by 46.3 per cent of the respondents as "most important." Following, in order of importance, are: Marriage counseling, 35 per cent; sex education, 33.9 per cent; money management, 32.6 per cent; etiquette good manners (tied with nutrition), 28.6 per cent; food and meal planning, 18.8 per cent; and sewing and dress design, 18.5 per cent.

Next in importance came: Health and hygiene, 15.2 per cent; table decorations, 13.4 per cent; cooking, 9.8 per cent and party planning 7.6 per cent.

Ninety-eight per cent of the teachers responding to Association Films' survey use business-sponsored films, as teaching aids. Ninety-one per cent use filmstrips, of whom 57.1 per cent prefer sound filmstrips. Almost 27 per cent indicated a preference for silent filmstrips.

Twenty-six per cent felt that "most" business-sponsored films are "sufficiently curriculum-oriented." According to 46.5 per cent, "some" are sufficiently oriented, while 26.3 per cent felt that "too few" are. The vast majority, 95.3 per cent, said they would "like supplemental materials" to use with films and filmstrips.

On utilization of teacher's guides, 52.7 per cent answered that they "always" use them, 42.9 per cent "frequently" and .2 per cent "never."

*(Continued on Page 4)*

### New Mailing Service Offered by Association

Association Films has formed a Materials Mailing Service for the storage, shipping and handling of printed materials, premium fulfillment specialties and other direct-mail items. The division is headquartered in Association's new eastern area film center in Fairfield, N. J.

Announcing the additional service, Robert Mitchell, president of Association Films, said "We are uniquely qualified for the processing of educational, sales and promotional materials. We have the personnel, facilities and, most important of all, more than 15 years' experience in shipping, scheduling and mailing of educational and other visual materials."

The service will be available not only to Association's clients but to advertisers, agencies and others with bulk or individualized mailing requirements. Among the clients using the company's Materials Mailing Service

## Home Economics And The Young Marrieds

As the survey published in this issue of "Audiences" indicates, today's home economics teachers are increasingly aware of the need for educating the *whole student*. The distorted cooking-canning-cake-baking image has been laid to rest for good and all.

When asked in which areas of the curriculum they felt sponsored films and filmstrips were needed most, 46.3 per cent chose family relations. Significantly, the three next "most needed" categories are marriage counseling, sex education and money management.

To many, these results will come as no surprise. After all, 40 per cent of all brides are teenagers and more wives have their first child in their 19th year than in any other. And shocking as it may seem to those "over 21," 40 per cent of the total U. S. population will be under 20 years of age within a year!

For industry the opportunity to provide teachers and their young charges with motion pictures and filmstrips that come to grips with the facts of life, so to speak, has never been greater.

A film in wide distribution to parent-teacher groups, guidance counselors and home economists, "Keys for the Homes of Tomorrow," provides an excellent insight into the *new* home economics. Produced by the Sears-Roebuck Foundation (in consultation with the American Home Economics Association and specialists from the Office of Education), it shows how many schools are broadening and revitalizing the home economics curriculum.

And, as borne out in the survey, the emphasis is on family living, marriage, parenthood and interpersonal relations. In a way the Sears-Roebuck Foundation film is a guide to areas of need. Interested sponsors might do well to view it.

## "Woolf" In The House

And, speaking of family relations films, we wonder if "Who's Afraid of Virginia Woolf?" qualifies. Edward Albee's corrosive study of conjugal cannibalism shows *in extremis* what can happen when misbegotten mates get together. As Elizabeth Taylor and Richard Burton played out their love-hate ritual on screen we were reminded of a "New Yorker" cartoon of a few years back: Two suburban-type matrons are shown leaving a movie theater where "Cleopatra" is playing. One matron is saying to the other, "Well, frankly, I liked her better in 'National Velvet'."

"My mother lives in Philadelphia. If you want the lady of the house, you're speaking to her."

## VOICE OVER

### The Sponsored Screen Screen

Newcomers: "Eighth Annual Daytona 500," NASCAR sized from Dynamic racked up more than 200 TV Plays during last 90 days in distribution via Association Telefilms' telephone campaign and poster-size direct-mail broadside (Send for your free copy) . . . "Parties That Soar," fun-and-sun stuff with stunning views of surfing, soaring, skydiving and other sports of the sixties, courtesy U. S. Brewers Association . . . Reprint available from AF of "Journal of Commerce" story on industrial film field. One of the best . . . American Airlines' "A Touch of California" proof, if such were necessary, why so many Americans are taking Greeley's advice to heart. It's a swinging tour of the great State from San Simeon to San Diego. Winners: "It's Your Decision—Clean Water" (League of Women Voters and the Soap and Detergent Association) and "A Changing View of the Change of Life" (Wilson Research Foundation) have received special awards from the National Visual Presentation Association . . . Expertise: "Thousands of Experts" (which could be called "How to Run a Successful Airline") tells how Alitalia keeps its big fleet operating and relations with the public so good (Ah those *signorinas!*) . . . Why doesn't someone make a film on the importance of reading? We're at the American Library Association, NEA and just about every educational group would be happy to cooperate.

# The Hand of Friendship: Welcome Wagon Style

Back in the days when families were crossing the continent in conestoga wagons they were often met at journey's end by the families with wagons filled with food and supplies. This gesture of friendship and hospitality was the inspiration for a unique service organization, Welcome Wagon International, founded in 1928.

Today Welcome Wagon extends the hand of friendship to a new breed of "settler," the 15 million Americans who change communities every year. Like their pioneer predecessors the 5,000 women of Welcome Wagon, who serve 2,000 communities in the USA, Canada and other countries, meet and greet

newcomers, offering them friendship, advice and symbolic baskets of gifts. The baskets represent the goodwill of the community and its local merchants and businesses.

A 28-minute Technicolor film "The Welcome Wagon" tells the story of this international service organization through the eyes of several Hostesses on their daily visits to newcomers and families celebrating a special occasion (such as the birth of a baby).

The film, produced and directed by Mel London for Wilding, is in distribution to women's organizations, churches, community service groups and television stations.

GOOD NUTRITION has helped America become the healthiest of all nations. This scene, from an original engraving, is featured in National Dairy Council's color film, "Food, the Color of Life."

"A NEW ART IN COOKING"—the reason's in the seasoning, might very well be the subtitle of this new 13½-minute color film from Lary's Foods, Inc. It compares the seasoning of foods with the subtle blending of pigments in painting. Both achieve effects that brighten and enhance the senses.

## A Pot That Sings In the Kitchen!

### Hearing is Believing!

*Ingredients:* one young bride, a singing pot, some imaginative cooking hints and a dash of whimsy. *Results:* "The Enchanted Pot," a charming fantasy that teaches with tunes how to prepare sauces, marinades, glazes and dessert toppings.

Corn Products Company is the sponsor and, not unexpectedly, the "enchanted pot's" advice involves creative uses of Karo corn syrup. The popularity of the film can best be realized by a quick look at the distribution results to date: 20,672 classroom and group showings to an audience of almost 810,000 persons. All this in less than 30 months!

The TV audience is mighty impressive, too: seven million viewers. With the quick-cook easy-to-serve foods part and parcel of the sixties there is a lesson in this film: pique a woman's imagination and cooking becomes fun. (Maybe some husbands would find themselves to be latent *Escoffiers* too!)

## Free-Loan Filmstrip Gets Wide Usage

Can a filmstrip and record be distributed as successfully as a motion picture? The answer is a resounding "yes," as attested to by "The Fabulous World of Food," from the Grocery Manufacturers of America.

This 14-minute sound filmstrip has been shown more than 5,000 times in home economics classes to some 158,381 students.

The filmstrip is excellent for pre-marrieds as it gives them many useful tips on budget stretching, especially when it comes to buying convenience foods. There's even a cue

## Dairy Council Shows The Milky Way

Among home economists and other educators the National Dairy Council is held in highest regards for its sensible, sound nutrition education program.

For many years a sponsor of classroom motion pictures, NDC has earned a reputation for developing films, booklets, nutrition charts and other materials, that present the case for balanced meals and proper diet with great effectiveness.

The Council's films are always in heavy demand. Little wonder, because they present health information in terms that students can easily grasp.

The newest NDC film, "Food, the Color of Life," tells how man during the past 50 years has learned to combat starvation and malnutrition through nutritional science.

"Uncle Jim's Dairy Farm," takes two city-bred youngsters on a tour of a modern, mechanized dairy farm, where everything is automated except possibly the bovine beauties themselves.

"Visa to Dairyland, USA" tells of a young exchange student who learns about farming American-style. Popular with school audiences the film has been widely shown on TV, through Association Telefilms' series, "Your Neighbor—the World."

To date, the three films have been seen by a cumulative audience of more than 100 million persons.

### CORRECTION!

We reported in error in our Spring, 1966 "Audiences" that the J. C. Penney Company had a limited edition album on its films "Mexican Watercolor" and "One Peseta, Two Peseta." The album was, in fact, privately produced only by the Producer of the film, Show Associates. It is not available for distribution.

as to separating edible from non-edible items on a check-out tape. The GMA filmstrip, like the many films we distribute to home-economists, will be offered in our four-page insert in the September issue of "Practical Forecast for Home Economists."

## Financial Happiness: Financial Planning

The National Consumer Finance Association, with its financial planning program, is right on-target with home economists. As our survey shows "money management" is rated as "most important" by 32.6 per cent of the teachers.

To orient students to the economic facts of life, the Association has packaged two 11-minute color films with teachers study guides, to be used in a single class period or on consecutive days.

"Personal Financial Planning" emphasizes the importance of prudent financial habits and sound money management. (With disposable income at an all-time high this one could hardly be more pertinent to today's young people).

The complementary film, "The Wise Use of Credit," acquaints students with consumer credit, how it originated, is established, the types of credit, cost factors and the amount of credit a family can afford.

## 'Come Catch a Rainbow' Colorful PPG Program

Pittsburgh Plate Glass Company is offering women's groups all over the country a most unusual 30-minute interior-decorating "program." We say program because that's just what it is.

Instead of relying solely on "canned" materials, i.e. a film or filmstrip, PPG gives program chairmen the opportunity to become active participants. The program, originally conceived for the General Federation of Women's Clubs, consists of a set of ninety 2 x 2 slides, an 18-page script, a program guide, a program evaluation record, a press release for use with local club editors announcing the decorating program, and quantities of a four-color, 24-page booklet called "Come Catch a Rainbow."

The color slides are designed to show homemakers the many colors currently available for use in home decoration and to illustrate a variety of color schemes and unusual ways to use color. This Fall the "Come Catch a Rainbow" program goes into high school distribution through Association Films' Materials Mailing Service.

## Consumer Protection Theme of FDA Film

Are we being adequately protected against dangerous drugs? Dishonest labeling? Pesticide residues? Chemical additives? Fraudulent packaging? Medical quackery?

Yes, according to the Food and Drug Administration in the informative new color film, "A Reason for Confidence." This 28-minute dramatic-documentary tells of the FDA's "invisible circle of protection" that surrounds almost everything we buy from foodstuffs to pharmaceuticals.

The film will be released to schools, colleges and community groups this Fall. During the Summer months it's being shown in selected resort areas, Travel Cinema airport theaters, and on television.

## Menopause Film

(Continued from Page 1)

"A Changing View of the Change of Life" was prepared under the supervision of Dr. Robert A. Wilson, president of the Wilson Research Foundation, Consulting Obstetrician and Gynecologist, Methodist Hospital of Brooklyn, N. Y., and author of the book "Feminine Forever," and Dr. Edmund R. Marmo, Director of the Laboratory, Carson C. Peck Memorial Hospital, Brooklyn.

The Wilson Research Foundation provides copies of a free booklet, "Feminine For Life," to all organizations ordering the film.

## 'Twentieth Century' Series Continues In Distribution

WALTER CRONKITE

The widely-acclaimed CBS-TV series "The Twentieth Century," which ends nine-year television and free-loan 16mm in this Summer, will continue to be seen in the Nation's schools and organizations, Association Films announced.

Association has acquired rental and sales rights to the vast library from CBS Film, Inc. More than 215 subjects will be offered starting September 1. Of these, more than 160 subjects will be available for sales within the United States and Canada.

The series, narrated by newscaster Walter Cronkite, has won every major television award including Emmy, Peabody, Sylvia and several blue ribbons from the American Film Festival. In all, the series has won 5 national and international awards.

Many outstanding subjects, some of which have been out of free-loan distribution for several years, will be offered, including "Churchill: Man of the Century," "Paris in the Twenties" (rare footage of Hemingway, Fitzgerald and other expatriates) and "From Kaiser to Fuehrer" (considered by many to be the best "Twentieth Century" program ever produced.)

Among the more recent programs to be offered include: "Norman Thomas: The Great Dissenter," "Synanon in Prison," "Plots Against Hitler," "Operation Gwam" (an animal rescue mission), "Majestic, Illinted Hudson," and "Moscow U" (educational Communist-style).

## Home Ec Survey

(Continued from Page 1)

The average number of films shown a year is 17, the survey showed. For best classroom utilization, 51.2 per cent preferred films that occupy "most" of the class period, 40.4 per cent "part," and 4.0 per cent "all" of the class period.

Thirty-minutes' running time was indicated as most desirable by 36.6 per cent. Twenty minutes by 10.3 per cent, 25 minutes by 9.8 per cent and 35 minutes by another 9.8 per cent. Only 10.7 per cent of the teachers surveyed have closed-circuit TV systems in their schools. Of these respondents, 58.3 per cent said home economics programs are "never" televised.

Almost 78 per cent of the teachers order films from commercial distributors. Of this percentage 34.6 per cent order them "frequently"; 25.2 per cent "usually"; 18.1 per cent "seldom."

Copies of the survey may be had by writing Association Films, Inc., 600 Madison Avenue, New York, N. Y. 10022.

## Avon Calling Audiences In Clubs And Homes

"Avon calling" has become a household expression. Complementing the cosmetic company's unique way of marketing—directly to the consumer in her home—is Avon's film program. The three films are in wide distribution to women's audiences in clubs, resorts, country clubs, community centers and on television.

They offer women some basic ingredients: fresh, glossy production values; beautiful high-style models and hints on the proper application of cosmetics and discreet use of fragrances. The titles are good, too: "Joy of Living with Fragrance," "Lessons in Loveliness" and "Beauty in the Making."

## Mailing Service

(Continued from Page 1)

Services are: Sears, Roebuck and Co., the Institute of Life Insurance, Armour & Company, Grocery Manufacturers of America, Corn Products, Pittsburgh Plate Glass Company, Soap and Detergent Association, Metropolitan Life Insurance Company, and Schering Corp.

The Materials Mailing Service can store, package and ship: filmstrips and tapes; kits; booklets, brochures and folders; teachers' guides; premiums, prizes and give-aways; catalogs, directories and manuals; TV newsclips, scripts and transcriptions; slides and transparencies; and many other specialties.

A brochure, "Materials Mailing Services," will be available shortly.

Gold and Silver "Cindys" Presented to Three Best Pictures  
General Bernard Schriever Gets Jay Gordon Memorial Award

"Challenge" Is Key Word for Film Makers  
at IFPA's Seventh National Conference

**P**LACASANTO, SUN-FILLED DAYS greeted members of the Industry Film Producers Association as they participated in a most successful, well-attended Seventh Annual Conference, climaxed by Cindy Awards ceremonies at the Miramar Hotel in Santa Monica, California on June 2-4. "Warmth" characterized these sessions as professionals in industry film-making gathered to exchange ideas, view one another's films in open competition and to get re-acquainted.

The "keynote" of the conference was in the frequent re-statements of challenge expressed by speakers and within special messages to IFPA from such old friends as Senator George Murphy (Rep. Calif.) and General Bernard Schriever, USAF. General Schriever was this year's recipient of the association's Jay Gordon Memorial Award, given him for his "outstanding contributions toward the advancement and promotion of the use of film." In his response, delivered by his long-time friend, General Osmond J. Ritland, USAF Ret. (now a vice-president of Douglas Aircraft Corp.), General Schriever said:

"It would be impossible to evaluate the total impact your contributions have made upon our national achievements over the past years of research and development effort. However I am certain

Neal Keehn (left) presented Jay Gordon Memorial Award to General Osmond J. Ritland, who accepted on behalf of General Schriever.

Senator George Murphy's message to IFPA was read to delegates by our past-president Robert Scott.

IFPA Officers-Elect (left to right): Ralph Hall, Financial Vice-President, Gene Huggens, President, Llano Dolnick, Executive Secretary, Raymond Jaeger, Executive Vice-President, and Michael Reese, Chapters' V. P.

that the unprecedented task would have been much more difficult to accomplish without the steady flow of audiovisual information that you produced and communicated."

"Films Hold Great Promise"

Senator Murphy's message, delivered by IFPA past-president Bob Scott, contained this expression of faith in films:

"I believe that the motion picture medium holds the greatest promise for communicating reliable information and creating genuine understanding of any means yet developed by man's inventive mind.

"This means to me that your specialized profession is very important to the nation's progress and security. You can help us become better informed, to make wiser decisions, if you will continue to develop your techniques, to define your goals, to refine your skills and improve your products — then see to it that they reach your audiences."

Equipment Better Than Image?

A further note of challenge was struck at the "kick-off luncheon" by guest speaker Joseph Mascelli, ASC. This author of "The 5-C's of Cinematography" noted "our equipment is constantly improving but I'm afraid I can't say as much for the images . . . Place yourself in the audience. Think in terms of what they would like to see. You should realize that motion pictures are more than a sharp image, with good color, and that the action moves. It should be a picture that says something, that means something, that involves the audience. The forgotten man is that man in the audience.

"Instruct and inspire in your industrial and business films. Not just instruct. Make them want to do the job right. It's not easy. It's a challenge — and I'm throwing that challenge to you," Mascelli concluded.

New Officers Are Introduced

A new slate of National and Chapter officers was introduced at the National Conference. The association's incoming president is Gene M. Huggens, General Dynamics Convair. Financial vice-president elect is Ralph Hall, Ralph Hall Productions and chapters vice-president is Michael Reese, former San Diego chapter chairman. Roy L. Deets was re-elected to his post as IFPA's editorial vice-president.

New chapter chairmen present-

Dr. Harold Dyrenforth, former president, welcomed members and guests at the first open session.

ed at Santa Monica were: L. "Scott" Robertson, Eastman Kodak Co., heading the Los Angeles Chapter; Larry Filby, Air General Corp., heading the Northern California Chapter; and Star Follis, Naval Electronics Laboratory leader of the San Diego Chapter.

Other officers-elect of the Los Angeles Chapter are: J. "Jack" Barlow, treasurer; Ed Rinke and Verne Vihlene, program co-chairmen; and Jim Newcom, QM Productions, as publicity chairman. Northern California's Chapter has Jim Goldner, San Francisco State College, as vice-chairman; Fraser, Fraser Productions, program chairman; John Corcoran, A. Palmer Films, Inc., membership chairman; Stan Ahlborn, Lin Peach Association, publicity chairman and Bill Murray, U.S. Department of Agriculture, as secretary.

They Keep Chapters Active

San Diego's Chapter chairman will be aided by Del Gay, KIEB-TV, vice-chairman (and in charge of program arrangements); and

Joseph Mascelli, ASC, delivered the "kick-off luncheon" address, challenge to business film makers.

Arjan Productions, publicity chairman; Ray Ussery, General Dynamics/Convair, the secretary-treasurer; and Frank Willey, Copy Productions, will be membership chairman.

Moderator of the Seventh Annual Conference was Frank Carroll. His superb handling of introductions and program detail was the high spot of the sessions.

**News and Closed-Circuit TV**  
The note of "challenge" continued during other program sessions, reminding film-makers to "catch up with today's advances in equipment technology" was Robert Roy, Space & Information Systems Division at North American Aviation. He demonstrated that your use of close-circuit television for employee indoctrination and training. Later in the program, Roy was joined by Cal Reed of the Division's motion picture unit. The two men discussed the

Conference moderator Frank Carroll (at podium) introduces head table at "kick-off luncheon." Left to right: Roy Deets, Harley Townley, Joe Mascelli, Harald Dyrenforth, Paul DeMello, Ray Jaeger and Elaine Dolnick.

Robert Engle, of Lookout Mountain Unit, USAF, took part in program on Air Force audio-visual plans.

Robert Murray, Air Force Space Systems Division, was companion speaker on Air Force program.

The Saturday morning session was concluded with a panel presentation, introduced by Bob Scott, assistant director government relations for audio-visual requirements at the Aerospace Corporation. Robert "Bob" Engle, of the Air Force Lookout Mountain post and Robert P. Murray, audio-visual staff officer for the Air Force Space Systems Division, discussed the use of audiovisuals in the Air Force. The growing requirements in South Viet Nam were outlined.

The regular program was con-

lems facing script writers of business and industrial films. Joining moderator Roy Deets in this session were Robert Hecker, Ed Lyons and Ray Ussery. Aquanaut Jay Skidmore, who participated in the recent Sealab II experiment off San Diego, gave an informative talk as did Daniel McGovern, chief of the Photography Division of the Air Force Flight Test Center at Edwards Air Force Base.

#### Forthright Look to Future

In his usual fiery and forthright manner, Charles "Cap" Palmer, executive producer for Parthenon Pictures, talked about the future of the non-theatrical film. He discussed both potentials and shortcomings which must be met by those who will help shape the future of this medium.

Another thought-provoking discussion was delivered by Albert Amateau, noted foreign language translator of films. His disclosure of the philosophy of thinking by peoples of other lands not only stimulated his listeners but also clearly highlighted the necessity of employing highly-skilled experts for translations used in overseas film versions. "Do it right if you expect success," Amateau concluded.

#### New Methods of Film Editing

An excellent review of new methods of film editing was presented by Frederick Y. Smith, ACE, of Walter Lantz Studios. He

also presented several demonstration films illustrating some of the new techniques now being used in motion picture editing rooms.

The final day's session began with a re-enactment demonstration of Lawrence Schwab's noted "Cineposium" television program, which appears on the Los Angeles area educational television station, KCET. During this Channel 28 program several young film-makers (and some not so young) present a film for viewing and constructive criticism by panelists. These films range from in-plant media to the latest in avante garde subject matter.

Schwab invited IFPA members and guests to submit their material for future "Cineposium" programs. He can be contacted at KCET, Vine Street, in Hollywood.

Panel on "Understanding Script Problems" was moderated by Roy Deets (left). Panelists (left to right) Robert Hecker, Ed Lyons and Ray Ussery

## IFPA'S 7TH NATIONAL CONFERENCE

challenge as he reviewed experiences at the Sixth International Industrial Film Festival in Rouen, France.

"We are reminded by this picture," Coelhn said, "that craftsmanship and quality are hallmarks of Europe's film industry. As the nations compete for economic markets, let us remember that America's prospects for our goods and services will sit in judgment of overseas films as they extend this friendly competition." He noted that the U.S. had only a single prize winner at Rouen and that small countries, like Belgium and Holland, showed to better advantage than did the 15 entries from the United States.

### Keelhn Presents Gordon Award

Neal Keelhn, vice-president of Deluxe General Labs and a former recipient of the Jay Gordon Memorial Award, made the presentation of this year's trophy to General Schriever at the annual Cindy Awards banquet. It was received on the General's behalf by General Ritland.

Elaine Dolnick, the association's dedicated executive secretary, earned the thunderous applause of conference delegates and guests when she received an honorary life membership in the organization.

Conference exhibit area, well-attended between all program sessions, featured 21 booths which displayed over 65 useful products for industry film makers.

and was cited by retiring president Harald Dyrenforth "for her self-sacrificing and unstinting service . . . for giving so much of herself and her time on behalf of the film people she loves so much." This year's conference program and hotel arrangements at the Miramar were arranged by Mrs. Dolnick.

### 21 Exhibitors Show Products

Adjoining the meeting rooms at the Miramar was IFPA's annual exhibit of relevant equipment and services. At this year's conference, some 21 exhibitors showed more than 65 products during the three day program.

The list of this year's exhibitors included the Amega Corp. of America, Arriflex Corporation of America, Bach-Auricon, Inc., Beckman Whitley, Inc., Cinema Center, Cinema Beaulieu, Inc., Delphi Films, Eclair Corporation of America, Foreign Language Service Co., Hollywood Film Company, Mole-Richardson, Pailard Corporation, Photo & Sound, Plastic Reel Corporation, Jack Pills Camera Equipment Co., Ralke Company, Televue and Vidifilm, Inc.

The latest in camera, lighting and other relevant accessories for industry film production and pro-

Charles "Cap" Palmer discussed potentials and pitfalls in "The Future of the Non-Theatrical Film."

Fredrick Y. Smith, ACE, described "New Methods in Film Editing" and showed some fine examples.

jection was shown to Conference delegates and exhibits were well attended at every interval during the program.

### Sustaining IFPA Membership

In addition to the above, IFPA owes special gratitude to other firms in the industry who are sustaining members of the association. Of these, Arriflex and Mole-Richardson were among the 1966 exhibitors. Other sustaining members are: Birns & Sawyer Co., Byron Motion Pictures, Cinema Research Corporation, The Cine-

sound Corporation, Color Reproduction Company, Consolidated Film Industries, Filmservice Laboratories, Inc., DeLuxe/General Film Laboratories, Hollywood Film Company, Magnasyn Corporation, W. A. Palmer Film Company, Pathe Labs, and S. C. S. Photo-Cine-Optics.

In retrospect, this 7th National Conference stands out as one of the best in many years, perhaps the best. Certainly the spirit of challenge was coherently expressed throughout the sessions. The "warmth" expressed in opening lines of this report was exemplified in the many exchange of viewpoint and the renewing of acquaintances as long inactive members returned to the annual gathering of the membership.

And the Conference had its emotional high spots as well. You will soon forget the happiness registered by IFPA's devoted executive secretary, Mrs. Elaine Dolnick, when she received that old honorary life membership from retiring president Dr. Harald Dyrenforth. Cry she did, too, with tears of expressive joy!

Useful technical knowledge gained from productive working ses-

Ott Coelhn, of Business Screen, talked on overseas film markets and presented a prize picture.

past-president Bob Scott gave members an inspiring talk on "The Image of IFPA" and the future outlook.

on scripts, editing, and production techniques will serve management's interest as well when executives perform their duties in the year ahead. Chapter activity through the months ahead will carry on the work of member education and information, improving both abilities and status. Retiring officers received well-earned plaudits from the membership. Their hard work in building the association and in taking part in new programs (such as the MPTE joint project) has revived the spirit of IFPA.

**"The Image of IFPA"**

Et past president Bob Scott summed it all up in his inspiring talk on "The Image of IFPA." The words of challenge and of encouragement will instill greater spirit and infuse new leaders and members with "go-ahead" enthusiasm as another new association year begins this fall. Well done, and we hope to reprint your talk together with the full messages of Senator Murphy and General Schriever in these pages. •

elvis: latest Arriflex camera is demonstrated in the exhibit area.

**IFPA Presents "Cindys" and Special Awards**

**T**HE SEVENTH ANNUAL Industry Film Producers Association Conference was concluded on Saturday evening, June 4, with the presentation of "Cindy" awards to outstanding business, informational and industrial motion pictures produced by members during the preceding year. The "Cindy" awards and other special honor presentations were witnessed by more than 300. This year's competition was conducted by member Ray Jaeger of San Francisco, aided by a panel of judges for the three official categories.

The traditional Jay Gordon Memorial Award, donated by Gordon Enterprises, was bestowed on General Bernard Schriever, USAF and received on his behalf by General Osmond Ritland, vice-president of Douglas Aircraft Corporation. The plaque was presented to General Ritland by last year's winner of this honor: Neal Keehn, vice-president of Deluxe/General Film Laboratories.

In an emotional ceremony at the close of the evening's activities, Mrs. Elaine Dolnick, executive secretary of IFPA, received an honorary life membership in the association as a token of "her self-sacrificing and unstinting services on behalf of all in IFPA."

Following the awards banquet, short clips from each of finalists were projected and the judges' decisions were then announced by retiring president Harald Dyrenforth. The winners in each category were as follows:

**FILMS FOR INTERNAL USE**

**Silver Cindy Winner (Best in Class): "Pilot Vertigo"**  
 Produced by Technical Communications, Inc.  
 for the 1350th Motion Picture Squadron of the  
 U. S. Air Force  
 Director: Leon Vickman. Cinematographers:  
 Frank Murphy, Bill Curtis.

Chartres' famed cathedral looms above the town along the banks of Seine.

## "Wings to France" a Soaring Travel Idyll

Pan American World Airways Film a Study in Mood and Color

Wings to France is the latest in Pan American World Airways' extensive series of travel promotion films. It is a truly unusual treatment of a much-photographed subject, and is receiving an impressive reception all over the world.

Edited as a mood piece, the film captures the interior quality of each major province of France using the visual images and the music of the particular section. After an introduction featuring a flash frame collage of all of France, the film begins with Paris visualized in seven distinct moods. Each mood is edited against Clara Haskell's variation on the French theme, *Ah, vous dirai-je, Maman*. Each variation sets a different mood and becomes a different way to look at Paris.

### Chartres Out of a Morning Mist

Following this, we move by car along the valley of the Seine for a dramatic early morning view of the great cathedral of Chartres. We have incredibly lovely detailed close-ups of the Cathedral in the early morning mist. The close ups alternate with spectacular long shots. The sound track here is simply a tintinabulation of the bells of Chartres.

The mood again changes as the film takes us through Normandy — "the gentle land" — accompanied by a beautiful rendition of the French folk song, *Ma Normandie*. We see the lush green coun-

tryside, the interiors of inns of Normandy, and finally a fantastic climax of a sunset shot of Mont Saint-Michel.

From Normandy, the film takes us to the valley of the Loire. Here, too, cinematic experience is new and vital. With fifteenth century music from the court of French kings, the film gives us brilliant exterior views of the great chateaux of the French renaissance — Azay, Chambord and Chenonceau, alternating with Fragonard and Watteau paintings of life inside the chateaux. This almost pastoral mood is broken by the sound of a lusty sea chant that introduces us to Brittany. Here we enjoy the rustic interior of a Breton inn watching the great wood sculptor of Locronan at work, and finally we go out with a fishing boat from the port of Douarnenez accompanied by a selection from Bizet's *L'Arlesienne Suite*.

### South to Bordeaux and Provence

The film takes us south through the wine country of Bordeaux. Here the unique ceremony at the Maisin du Vin was filmed. The viewer is treated to rare scenes of wine tasting in the Chateau Haut Brion. In the Pyrenees, the lovely village of St. Jean de Luz deserves special attention. The Basque province is brought to a stunning climax with a wild Basque Festival.

Following this we see the old walled city of Carcassonne with the

starkly beautiful ramparts edited to contrast against the crashing of snare and timpani. The film moves at a more leisurely pace through Provence pausing at the world famous inn, L'Oustau de Baumaniere.

We hear actual live sound sequences at the music festival at Aix starring Theresa Berganza in *Così fan Tutte* and Georges Wilson in Corneille's *L'Illusion Comique* at the drama festival in Avignon.

### Scenes of Pure Joy on the Beach

All of this artistic splendor is followed by a wildly funny sequence of joining together all the beaches of France to the tune of *La Sorella*, played by Georges Feyer. These are two and a half minutes of pure joy.

The film comes to an exciting and romantic ending with a final

look at Paris. The camera moves through the streets of the city to give us views of the lovers and of the city itself. The final score is *Les Belles Amourettes* composed by Francis I in tribute to the lovers of Paris. The folk music was recorded by the singers of Le Caveau des Oubliettes in Paris.

*Wings to France* is considered an outstanding addition to an American's notable series on his shrinking world. Vision Associates produced the half hour color film. Lee Bobker wrote and directed it. Helen Kristt was executive producer, Morty Fuchselid a particularly creative editing job with the images and music and Herbert Raditschnig, Vision's overseas cameraman, contributed an outstanding camera job.

## Seagram Film Aims to Keep 7 Crown on Top

WHEN YOU'RE SELLING the most popular whiskey in the world, and your sales are still going up, why not take it easy? This is the dilemma regularly confronting the sales force of Seagram Distillers Company, makers of 7 Crown whiskey, which sell nearly eight and a half million cases a year. In a market where 15,000 brands of distilled spirits are competing, this is one of the most remarkable of any brand name success in the country for any type of product; it might seem that, if any product can be said to, 7 Crown, indeed, sells itself.

But perhaps the most important reason for 7 Crown's success is that it not only sells itself on quality, but it is regularly sold by an enthusiastic sales force, as well. Seagram salesmen have 35 good reasons why 7 Crown is a top value, and a top seller, and it is their practice to mention at least one or more of these reasons during every call on taverns and package store retailers.

### Meetings Discourage Complacency

Part of the campaign to encourage the continuance of this enthusiastic selling and to discourage any complacency which might set in with success has been a series of meetings held this spring for distributors' salesmen featuring a new motion picture which documents some of the reasons for 7 Crown's rising popularity among consumers of all types of distilled spirits.

Titled *Quality of Demand*, the 10-minute sales film is based on a recent \$100,000 survey of 2100 representative American drinkers in 153 areas across the country.

The survey shows that right now in 1966, more than one-third of all liquor consumers in the U.S. are current 7 Crown drinkers; 7 Crown is far and away the favorite of the great middle class which accounts for 82 per cent of the entire market; and 7 Crown's popularity is no geographical, social or economic limitations — it is rated first by consumers for quality and prestige by a ratio of better than two to one over the next competing brand in its class.

### Scripted by Dominick Albi

*Quality of Demand* was written by Dominick Albi, Seagram Merchandising Manager, and produced under the supervision of Fry Luntz, Director of Trade Relations. It was produced, in the Flo-tation technique, by Animated Productions, of New York. Flo-tation brings action — zoetrope pans and kindred other special effects — into such static materials as stock photographs, ads, newspaper graphs and brochures. 25 pieces of still material were used in this lively film.

*Quality of Demand* is the second in a series of motion pictures for 7 Crown. A previous film was *Quality of Product*. Future subjects will be on turnover, advertising and promotion, and the future of the brand.

### Clairol Introduces "Great Day to Trade with Musical Revue on Im"

Automobile lights weave a festive pattern in Paris' Place de la Concorde.

## Now add MOTION— and slides tell your story more clearly, more completely, more dramatically than ever

Now, when your subject is complicated, you can add motion to your slides to explain what's happening in a machine or system. For example, a single slide now can tell more clearly than words what happens to air when the nose of a rocket hits it. Or how a heat-exchanger works. Or how steam moves through a turbine. Where once you needed a dozen slides for a complicated idea, a single slide now conveys it better.

You can show motion slides with your KODAK CAROUSEL Projector. All that's needed is a simple, inexpensive, easily attached KODAK Motion Adapter, along with slides specially prepared for use with the Motion Adapter.

The Motion Adapter is part of a complete projection system that lets you make more lifelike, more dramatic slide presentations. You can have color, sound, motion. You can add the excitement of dissolves, the drama of a change in pace.

This versatility revolves around the jamproof KODAK CAROUSEL Projector and its famous round tray. One tray holds 80 slides. You get instant editing, yet the tray is spillproof. You can even link up two projectors to give you an exciting 160-slide presentation with fades, dissolves, and coordinated taped sound. You can program for unattended operation. We can even show you how to build a control center that runs a whole bat-

tery of slide and motion-picture projectors to give you a presentation that keeps your audience on the edge of their seats. Want the story? Just use the coupon.

#### Fastest Long-Distance Auto Race in "Eighth Annual Daytona 500"

☆ A new stock car race film, *Eighth Annual Daytona 500*, is being made available to clubs, schools, sports and drag-car clubs and TV stations through Association Films, Inc. The quarter-hour color film shows highlights of the 1966 NASCAR classic which has gone down in the record books as the fastest long-distance race in history. The film is presented by Daytona International Speedway and was produced by Dynamic Films, Inc.

Over 90,000 people, the largest crowd in the history of the Daytona International Speedway, were on hand to see Richard Petty set a searing average speed record of 160.672 miles per hour to finish first in a specially prepared, hemi-powered '66 Plymouth.

Twelve cameras capture all the excitement of the race as one by one his competitors drop behind leaving just Petty and Cale Yarborough in his Ford to fight it out for first place after 198 grueling laps. Petty took the race and also set a record of 176.817 miles per hour for the fastest lap ever run.

#### Army's Film "Those Who Lead" Aids College R.O.T.C. Program

☆ *Those Who Lead*, a U.S. Army film on the R.O.T.C. program, has been released for intensive use in college recruitment programs this Fall.

Featuring Chet Huntley, NBC-TV news commentator, both on camera and as narrator, the film was shot on college campuses and military installations around the country, shows how college students training for a specialized career can become officers through the R.O.T.C. and serve in the Army in their field of specialization. R.O.T.C. students studying for degrees in Electrical Engineering, Architecture, Accounting, Computer Programming, Nuclear Physics and Forestry are featured in the picture.

The 30-minute color film was placed through Ketchum, MacLeod and Grove, Inc. and was produced by Gerald Productions, N.Y.

## New Audiovisuals for Business & Education

### Bache & Co. Uses Overhead Slides for Investment Seminars

Use of visuals as the "core" of a presentation, rather than as an adjunct, has neatly solved a complicated problem faced by Bache & Co., one of the country's larger stock brokerage houses, in developing a unique "Advance Investment Seminar" for use coast to coast.

Many thousands of investors across the country are now participating in the three-session seminars, arranged by Bache representatives in offices in dozens of cities.

In planning the seminars, Bache

sought a form of presentation that could be used by any of hundreds of representatives, few of them used to public speaking. It wanted each seminar leader to be "himself," able to project his own personality and use his own words. Yet of necessity the material covered had to be controlled and kept basically uniform. In addition, while planned for use over a long period, it had to permit use of figures and facts drawn from news and market reports only a couple of hours old.

Bache's producer, Admaster

Helicopter air lift of "M-U-S-T" package demonstrates mobility . . .

Corpsmen carry wounded into the hospital after 30-minute setup.

#### Garrett Corporation Film Shows Air-Transported Field Hospital

☆ Structures which rise rapidly as air pours into them, and which retain their shape and usefulness through nothing more than the support of air, are a fascinating concept to most laymen, and little more than that, so far. To men in the U. S. Army Medical Service, and to some men in the field who have been housed in them, the structures are quite real, and immensely practical.

The "buildings" are field hospitals, the "inflatable" portion of *M-U-S-T*, *Medical Unit Self-Contained Transportable*, developed and produced by The Garrett Corporation, of Los Angeles and Phoenix.

The new sound and color film, processed by Hollywood Film Enterprises, describes the problem of

Medical unit is being inflated, ready for service in the field.

Here's interior view of Garrett self-contained portable field hospital.

hospitals which must go into action quickly in literally "impossible" surroundings, and the Garrett-AiResearch solution which applies to areas with as wide a temperature range as  $-65^{\circ}\text{F}$  to  $+140^{\circ}\text{F}$ . Air-transportable, the field hospital includes a "utility element" containing a needed power package; an "expandable element", collapsible, with rigid panels which can be opened and made ready in 30 minutes for surgery, pharmacy and other components of a field hospital; and the exotic-seeming air-inflatable free-space unit useful as a ward, surgical section, dispensary, or related purpose.

The film was lensed by Les Meek and Bill Remington of The Garrett Corporation and produced by Arco Enterprises, North Hollywood, California.

Bache representative conducts seminar using overhead slides.

Prints, Inc., of New York, and the solution to these problems by creating a structure for the material to be presented, in the form of a series of 125 10" by 10" cu-ram-framed, full color overhead projector slides, designed for use with the new 17 lb. Beseler "Intra-Scribe."

A fresh, simple cartoon plus charts, tables and diagrams illustrates each point or subject the presenter is to cover. Many of the slides are designed to let him bring in the latest data, as the slide being shown. The visuals keep the seminar moving briskly, "on the track," while helping the speaker.

Since the seminar series is being given not only in Bache offices, but will also be taken out to groups, Admaster completely "packed" the presentations for each session. Special "attache cases" carry each session's slides and all supplies. One man can easily assemble the Porta-Scribe and set it up quickly, and give the presentation.

Bache's satisfaction with the solution, as proved in advance testing, was shown by the success of the announcement advertisement which used half a dozen magazines and scores of local newspapers. "Opening Night", May 19th saw the seminars begin simultaneously in many cities. Heavy reliance on visuals makes a hit with viewers as much as with presenters.

SIEMENS 2000 16/16 projector  
 from 16mm magnetic deck side.

## SIEMENS SIXTEEN/SIXTEEN

Yes! The Siemens 2000 16 16 is a portable projector that can provide your training program with all the flexibility and capability of double-system sound. It's a fine optical magnetic sound projector, mechanically interlocked with a 16mm magnetic deck. Whether used as a single-system or a double-system, this unique machine provides theatre-impact performance. For training programs, the versatility of the Siemens 2000 16 16 is practically unlimited—it makes single-system or adaptable double-system sound, fast, easy and inexpensive.

Record, re-record, playback—make effective sound tracks for workprints, or original camera footage—make one sound track or several—you can do them all on the same machine. For instance—you can have a sound track for Engineering and another for Production—one for the old timers and another for student beginners. And, because changes are quick and easy, your sound track can be as up-to-date as "tomorrow."

Because the Siemens 2000 16 16 is portable, you can put it to work in your studio—or on the run—in office, plant, classroom or wherever. Whether it's to be your only projector or supplement to existing equipment, this versatile machine is the time saving, money saving answer to dozens of training film problems. # The Anatomy of a Motion Picture

A Step-by-Step Analysis of the Planning and Preparation Which Helped Make "The Paper Forest" a Successful Film

WHEN THE SOUTHERN PULPWOOD Conservation Association arrived at a decision to make an informative new film, the individuals designated with responsibility for the project began a painstaking job of planning and action which bids fair to win a high mark in the annals of business film productions.

Since the SPCA represents and is supported by pulp and paper companies and independent suppliers of pulpwood in 12 Southern states, the Association's Public Relations Committee had one obvious fact on which to kick off: This would be a communications effort to tell certain audiences what the Southern pulp and paper industry is and how it operates, and how and where it gets its raw material.

## Choosing a Committee Leader

From there, the committee moved to select from its membership an individual to lead the effort to get the project first on then off the pad. The man chosen was John Harvey, general public relations manager of Bowaters Southern Paper Corporation, Calhoun, Tenn., who subsequently was named and currently is chairman of the volunteer committee.

Working closely with him were SPCA staffers H. J. Malsberger, general manager, and John C. Witherspoon, assistant general manager; various other members of the committee, and account executives of Liller Neal Battle & Lindsey, Inc., the Association's public relations counsel.

## These Questions Were Raised

When things began to move, among the questions brought up and answered — in many days,

weeks and months of work — were these:

What message or messages do we wish to convey in this movie?

Should it be in black and white, or color, with or without sound, and how long?

Who will want to see it, and who will we want to see it?

Who will write the script, and who will do the filming?

What will we title it?

How will we get the greatest possible exposure to the particular audience or audiences we decide we want?

## Select Producer, Distributor

The first moves, made almost simultaneously, were to select a producer and a distributor.

The former involved visits by Mr. Harvey and others to studios, previously investigated, of various producers of business motion pictures, and reviews of films that each producer under consideration had made. After the results of these investigations had been evaluated, Frank Willard, of Frank Willard Productions, Atlanta, Ga., was commissioned to write a preliminary script. Before starting the script, Mr. Willard visited operations of companies represented on the Public Relations Committee to gather ideas from forestry and mill personnel about what should be included in the film.

Meanwhile, also after careful investigation and direct contact with officials, Modern Talking Picture Service Inc., headquartered in New York, was chosen to handle all aspects of distribution of copies of the film to the selected audiences.

Thus, at the very beginning of the development of the script, SPCA had the benefit of the highly

Seeds from superior trees, planted in special nurseries maintained by pulp and paper companies, are checked in the field.

experienced distributor who gave counsel to help determine the audience for the film.

## Audience Determined Content

Following evaluation of existing SPCA public information materials, including results of an opinion survey, and a study of communications needs in the light of current and anticipated socio-economic developments, the decision was made that the film would be a high quality, imaginative and informative production, in color and sound, designed primarily for high school students in science, social studies, and vocational education and guidance classes. This was influenced by the distributor's advice that schools would likely provide 80 percent of the market.

It was determined further that such a movie would also be of interest to diverse adult groups which could be a vast secondary audience. This influenced another decision that the film would be 28½ minutes long to make it suitable for television showings.

## Planning the Teacher's Guide

Another project germinated in conjunction with the primary audience decided upon was that a teacher's guide, written by a competent educator, be prepared to accompany the film for each school showing. Research into this matter resulted in the designation of

Dr. Jonathon C. McLendon, professor of social science at Florida Atlantic University, to head up preparation of the proposed idea. All of this activity was backed up by the fact that at the time a decision was made to pursue the project, SPCA member companies had given approval for a sufficient appropriation of funds not only to produce a movie, but also for purchases of prints and for promotion and distribution costs for an estimated two years' operation of the film.

Actual production of the movie on location at various pulp and paper mills in the South, was begun early in 1965, with Frank Willard handling both the script writing and the filming.

## Blueprint for PR Campaign

At the same time, personnel of SPCA's agency was preparing a comprehensive blueprint for a public information campaign about the film which would literally blanket the 12-state Southern region. This ultimately involved preparation of tailored news releases for approximately 75 periodical publications in nine categories; release to newspapers and broadcast media; letters describing the film to executive directors of every local chamber of commerce; special preview of film for invited groups in area. (CONTINUED ON PAGE 12)

Above: continuous operation of this machine converts wood pulp into paper. At left: a Willard cameraman "on location" at one of the several Southern pulp and paper mills where sequences were filmed for "The Paper Forest." A machine for testing paper strength is the subject of this film scene.

## The completely new 16mm Sound Projector

Until yesterday, you had to settle for good 16mm sound projectors. Now there's a great one—the RCA 1600. Before you settle for any projector, ask your Audio-Visual Distributor to demonstrate the 1600. See these new features in action:

**Extra brightness makes it ideal for auditorium as well as classroom use.** New optical design makes the RCA 1600 screen picture the most brilliant ever.

**Full-time fidelity.** All-transistor 12-watt amplifier and new super-sensitive speaker, built right into the projector case, reproduce the finest sound in 16mm.

**Improved operating convenience.** Reel arms you can position with one hand, instant sound, fast focus, reverse with automatic sound cut-off, 1200-foot take-up reel stored in case, and stop-on-frame option, make the 1600 the most convenient-to-use projector ever.

**Self-threading that's carefree for you and safe for films.** Optimal RCA "Safe-Threader" works the film loader through automatically and then is disengaged so that it never touches the film.

The Most Trusted Name in Electronics

## Anatomy of a Film:

(CONTINUED FROM PAGE 50) ous states; previews for editors and or columnists of selected major publications, preparation of special informational brochures about the film and plans to reprint favorable reviews of the movie for use in follow-up publicity.

Plans also were made to submit the production for entrance into all possible appropriate film events which might lead to an award that would give SPCA's offering further prestige and recognition.

### Program "Go" At Release Date

All of this massive, continuous and coordinated effort resulted, as planned, in all the components of the project ultimately coming together virtually at once to form a whole; and when copies of the finished film (which underwent repeated revisions and refinements over a period of months) became available in the late Fall of 1965, the whole package was triggered into successful orbit. The very fitting name that had been chosen, after a welter of suggestions were considered, was *The Paper Forest*.

The whole pattern followed Mr. Harvey's firm concept of maintaining steady, concurrent progress on all fronts.

AS SPCA General Manager Malsberger put it: "I have had experience in the production and use of all SPCA's previous films but never have I experienced the degree of advanced planning which Chairman Harvey of the PR Committee and his members performed for the production and promotion of this film."

### Dedicated Corps of Volunteers

Mr. Willard, who ended up working with dozens of people on the project, said that never in his experience had he seen such dedicated work, all volunteer, on a project of this sort. "Mr. Harvey was in almost constant communication with us every step of the way," he declared, and "nothing was left to chance. We are proud of our part in it and extremely pleased with the results. In fact, we already have sold more prints of *The Paper Forest* than of any of our previous production." Prints are sold at only the cost of making copies.

Dr. Melendon was strong in his praise of the fact that a distributor had been selected, and all the groundwork for circulating the film had been laid, long before the movie had become a fact. "The whole thing," he added, "was about the finest coordinated effort I've ever experienced. The deci-

sion to have a Teacher's Guide was also a vital move which adds great strength and value to the movie and the message it carries."

### "A Most Satisfying Experience"

Mr. Harvey, whose sustained enthusiasm spanned months and months of work, declared: "Helping to put together on film the story of the pulp and paper industry in the South has been one of the most satisfying association experiences I have ever participated in."

"It is a rare situation," he continued, "where in association work any given major project does not become literally 'chewed up' in the committee process. In this light, our film *The Paper Forest* is an unusual, if not unique, project."

"Oh," he admitted, "there were

times this film project nearly went off the path. While there were times we skirted close to the edge, on balance, the team that put this job together recognized that the creative process should not be bogged down by whims of the casual kibitzer. There were cross-roads when bold decisions had to be taken; where a high degree of risk, that important people might be offended, had to be assumed.

"The proof of the pudding, however, is in the eating. We commend this effort to the viewer," Mr. Harvey concluded, "to determine if we succeeded. In the final analysis, it will be the viewer who will determine if we truly succeeded in building a product to meet an important need among high school students and the public in general

who, according to our survey, wanted to know more about the pulp and paper industry in the South."

### No Letup in Audience Demand

Reports from the distributor show that in the November, 1965 through March 1966, period *The Paper Forest* was shown 883 times directly to audiences totaling 688 people. These were largely student groups.

During the same period the film was shown 60 times on television stations, mostly in the South, to an aggregate audience estimated at 2.4 million persons.

Further, the distributor estimated originally that a library of 70 copies of the movie would be sufficient to meet anticipated bookings for the first year, but demand has been so great that it has been necessary to add 11 more copies. As of this writing, there is no sign of a let-up in demand, and bookings already are set months ahead.

Besides the extensive newspaper coverage of the film resulting from the blanket of releases to newspapers, periodicals and broadcast media, favorable reviews also appeared and will be reprinted for further promotional purposes.

### Selected for Forestry Festival

The cream on top of this to date is that *The Paper Forest* has been chosen, from among 38 movies considered, as one of the four outstanding forestry films produced in the United States in 1965. As a result, the film is to be screened at the International Festival of Forestry Films in the 10th World Forestry Congress to be held in Madrid this month.

The film may be borrowed free (with priority given to audiences in the 12 Southern states) by writing to Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N.Y. 10020.

\* \* \*

### Agricultural Chemicals' Pieter Sponsored by Sherritt Gordon

Wheat growers and grain dealers and distributors in Canada are the audience for *The Sherritt Gordon Agricultural Chemicals Story: From Mine to Market*, shown by that company's representatives. Sherritt Gordon Mines Ltd. are producers of nickel-cobalt and chemical fertilizers.

U. S. showings will be made through facilities of International Minerals and Chemical Corporation. The 21-minute color film was produced by Mirabelle Enterprises for the sponsor's agency, Harry P. Bridge Company, Philadelphia.

## Dear HFE:

You've talked about HFE Quality color originals and prints, quite convincingly. What else should we know?

☆ ☆ ☆

## Dear Lab Customer:

You should know that *HFE Quality* comes from personalized service, and this doesn't mean limited capacity, but simply precision *care* applied at every point in a large operation.

HFE develops each type of film according to its own individual requirements, with accurate control of speed and temperature as it travels through the various processing stages until it emerges from the impingement drying cabinets. Temperatures of solutions are maintained by the finest thermal regulators within one-tenth of 1 degree.

As new films are developed to yield ever-better results—such color improvements and wider exposure latitude as are provided by the new 16mm Ektachrome EF Daylight Type (7211) Ektachrome EF Type B (7242), for example—HFE moves immediately to provide safe and rapid processing, with the same one-day service of processing original and furnishing color daily print.

And capacity is broad: With modern high-speed facilities, HFE is able to process color and black-and-white film at the rate of hundreds of thousands of feet per day. You're assured prompt delivery of release prints in any quantity desired.

Test inspect HFE capabilities and you'll know what it is that satisfies the many critical print-buyers who have been customers for many years. Do it soon, won't you?

**Sometimes a single cameraman has to do the work of ten. He needs a singular camera: The Bolex H-16 Rex-4.**

**Compact and Portable—even for double-system sound!**

- New Constant-Speed motor (24 FPS) weighs only 2 lbs. Has sync pulse output for perfect lip sync with light-weight 1/4" tape recorders.
- Rechargeable Power Pack drives hundreds of feet of film per charge. Small enough to fit your pocket.

**The Rex-4 Camera can eliminate expensive re-takes!**

- Full-time flicker free reflex viewing and focusing on ground glass; 10X image.
- Continuously variable shutter for fades, dissolves, and for greater exposure control. Unlimited film rewind.
- Filter slot. Super-accurate automatic dual-frame counters.
- Registrator claw for professional steadiness.
- Fast automatic threading—camera forms its own loops!

**The Rex-4 System is the most complete in the world!**

- Prime lenses from 10mm to 150 mm: macro-telephotos, full range of zooms (5-1, 10-1), including world's most compact 5-1 zoom and exclusive automatic electric-eye zoom.
- Rexofader for precise in-camera fades, dissolves.
- Matte box, titler/animation stand, underwater housing, wild motor, camera cases, camera grips—you name it!

**The Rex-4 Camera is world-famous for precision workmanship!**

- It's the result of 30 years' development and refinement of one great design.
- It's built by Swiss craftsmen to handle the roughest treatment. It has traveled from the Amazon to the Himalayas. No complaints from the cameraman or the camera.

In spite of its tremendous precision and versatility, a complete Rex-4 System costs 1/4 to 1/3 less than other professional 16mm systems. Send for a free 16-page booklet describing the use of motion picture equipment in industrial photography and the Bolex catalog. Write: Paillard Incorporated, 1900 Lower Road, Linden, New Jersey, 07036.

**BOLEX**

Four motion picture processors serve MSC's Technical Laboratory Branch. Three black and white machines are in the foreground. Over 400,000 feet of color and monochrome motion picture film is processed on these machines each month for the Engineering and Public Affairs Branches at the Center.

## "Faultless" Quality Standards Are Vital at Manned Spacecraft Center Laboratory

**W**EEKS BEFORE a recovery mission plucks astronauts and their Gemini spacecraft from a watery landing, technicians in the Photographic Laboratory, Manned Spacecraft Center (MSC), Houston, Texas, begin a motion picture processing cycle unlike any other in the world.

Designated officially as the Technical Laboratory Branch, they are responsible for developing, duplicating and storing the originals of all MSC film, including on-board material — 16mm, 70mm and 35mm — exposed during orbital flight. The Branch is divided into two sections, motion picture printing and processing and the still laboratory that processes black and white and color film.

### 90 Employees on Two Shifts

Just over three years ago, what is now a two-shift operation with some 90 civil service and contractor supplied employees, was a

three man operation. Processing facilities were installed in a converted Air Force commissary building at Ellington Field, Houston, and meat lockers were used for film and paper storage. During 1963, approximately 3,000,000 feet of 16mm color motion picture film was processed.

"Today we are averaging around 400,000 feet of 16mm color motion picture film per month plus substantial amounts of 35mm and 70mm color film and black and white," says John Holland, chief of the Technical Laboratory Branch. "The volume of MSC's operation and the quality control procedures used, make this laboratory unique."

"Quality" is a daily by-word in handling all of MSC's film work, but especially where flight film is involved. Since these are in the truest sense one-of-a-kind photographs, technicians are constantly

*With No Leeway for "Retakes" of Space Exploration Film Processing Must Achieve Technical Perfection at This La*

on the alert to avoid errors — even a slight one — that could damage or destroy the film's latent image.

"One of the most anxious assignments so far," says Holland, "was the processing of two reels of 16mm thin base color motion picture film (Eastman Kodak SO 217) showing Ed White's Extra Vehicular Activity. We knew everyone in the world was waiting to see these highly publicized motion pictures that proved as fact, what America claimed as her first 'walk in space'. There were a lot of nervous men in the department before that film threaded its way into the drying cabinet."

### Taking Care to Avoid Error

Everything possible is done to prevent mistakes in the handling and processing of space film. A continuing chemical analysis is checked against a standard furnished by Kodak, cameras are examined and test runs are made in the motion picture section to keep technicians proficient.

Each phase of pre-launch and post-launch activity is carefully scrutinized for possible trouble areas. Manufacturer-supplied films are opened and samples taken to verify that each box is labeled correctly as to contents. Part of the sample is exposed with a standard color patch. This is processed and a sensitometry graph is plotted for comparison against the returning footage exposed by the astronauts.

### Handling Spacecraft Films

"On-board film is spooled and loaded into magazines in MSC's photographic laboratory," says Fred Southard, quality control chief. "One room is cleared except for a table and the necessary winding equipment, the walls and floors are scrubbed, all light bulbs removed — even from halls and adjoining rooms — and finally a technician and I lock ourselves in and seal the door with black tape.

As a last safeguard, a spool number and magazine number are assigned as cross reference to exposure information, film batch and pre-developed sensitometric strips. This number is perforated into the film and written on the magazine."

### Triple Duty 75-Degree Machine

Actual development of color motion picture film is done on a triple-duty, 75-degree processor specially built to MSC specifi-

cations by Hi-Speed Equipment Company. It processes 35mm and 70mm (standard thin base) all in the same machine at the same time. By pumping holding tanks and replacing ME 2-A solution, the machine also switch from Kodak chrome Commercial to chrome ER.

"We operate processing equipment on auxiliary power as standard procedure to anticipate electrical failure," says Holland. "This is done as a safety precaution during processing of flight film. If the auxiliary generator fail, a flick of the switch puts plant back on house power, operating the other way it might take hours to get generators started and running properly. We just don't take any chances."

The entire center is put on a while processing original flight film. For example, no construction or repair work which might cause a utility failure is done.

### Precautions Have Paid Off

Precautions such as this have paid off for Holland and his staff. No flight film has been damaged or destroyed since the laboratory's creation in 1962. But it is a flight film that MSC considers irreplaceable. Of the two areas created by the Technical Laboratory, Engineering and Public Affairs Office, Engineering accounts for the bulk of the film work. "We must be able to process the film quickly and accurately to give engineers the best data to a job. It is sometimes the smallest portion of the film which will give clues to malfunctions and we can't afford to miss anything. We can't firm or deny suspicions," Holland explained.

MSC is justly proud of the standard of work turned out at the laboratory. Participating in a quality assurance program, MSC

Below: Three sizes of color motion picture film—16mm, 35mm, and 70mm, can be processed simultaneously on this 75-degree processor built specially for the Manned Spacecraft Center and modified to handle thin-base color films. It was on this machine that the famous motion pictures of Ed White's historic "walk in space" were developed after GT space flight.

Quality control chief Fred Southard plots sensitometry graph, an important tool in the quality assurance program at the laboratory.

After processing, the film and its work order are delivered to the workbenches where motion picture film is cut to match order, canned, and routed on to Production Control for distribution. During peak seasons, three film technicians are kept busy matching films to orders.

regularly delivers chemical samples and sensitometric charts to the Eastman Kodak Company for testing and recommendations. The Space-Flight Center's processing quality has been consistently rated on the same level as that of the film manufacturer.

"It is important to stress that there are no secrets, no special formulas for chemicals or other 'tricks' in our film handling," says Southard. "MSC mixes pre-

Heater unit mounted atop color processor was among modifications made to handle thin base color film. Using woman's hair dryer, heat and metal flexible tubing, technicians solved problem of fogging underside of thin base film.

aged Kodak chemicals and brought right by the book in using them. We feel that any independent laboratory could get top results by doing the same as we do — stick to manufacturer instructions and always be on the lookout for trouble spots."

#### But Handling to a Minimum

Chemicals are only half the story according to Southard; the efficient operation of equipment and technicians is the other half. "Too many cooks spoil the broth," is an old adage Holland

considers worthwhile when processing flight film. To cut handling down to a minimum, one technician and one assistant are assigned to follow in-coming Gemini material each time a launch is scheduled. Routines are practiced over and over again by these already skilled men — the average MSC technician has between 15 and 25 years of experience. Stock is fed through the processor and sensitometric graphs are made on the results; chemicals are tested as to PH, specific gravity, total alkalinity and other factors, and sample strips of film are examined for waterspots and scratches.

"It could take as long as 20 hours to develop flight film," says Southard. "Even after preparing (CONTINUED ON PAGE 70)

Chemical analysis of all material used in MSC's photographic laboratory "leads off" possible trouble in processing. Terry Slezak, quality control assistant, checks samples for PH in the quality lab.

## From the pioneers of rear-screen projection Advanced audio-visual film projection systems

### SLIDES

BUSCH Cine-Slide Projectors have many special features, including: Big 14" x 14" built-in Daylight Screen; 80-slide capacity; automatic or manual operation with Kodak Carousel projector. Available with or without sound unit. The Busch Cine-Slide Projector is versatile, dependable, portable and lightweight.

### 16 MM

BUSCH Cinesalesman self-contained, continuous 16mm projectors are dependable, portable, versatile. Available in variety of models to meet any requirement for continuous or rear-screen projection. Unit has 20 years of proven performance with many patented, exclusive features found only on world-famous Busch Cinesalesman projectors.

### BIG SCREEN

The Big Screen 16mm continuous BUSCH Cine-Educator Projector is dependable, self-contained, mobile and beautifully finished in Walnut Formica. Special features are: push-button start; automatic cycling stop; auxiliary cooling system, and high-quality sound. Heavy-duty projector units with many exclusive features. This unit can also be supplied with Slide Projector in place of the 16mm Projector.

### SPECIAL UNITS

We have 25 years of experience in the design and manufacture of complete Audio-Visual systems for schools, business and government. We can engineer and manufacture any requirement you may have for Special Projection devices or systems such as multi-screen projection systems, synchronized projection, complete remote control or projectors and many others.

BUSCH FILM AND EQUIPMENT CO.

214 S. HAMILTON ST. SAGINAW, MICHIGAN

# AudioVisual Equipment TradeFair

these pages provide a "trade show in print" of the latest audio visual projection equipment and related accessories especially useful for today's varied business and industrial programs. the right choice of equipment for each medium has been enhanced by engineering and design work that is evident in today's lighter, brighter, and more dependable projectors of every type. but the buyer should also look for field service capability, for recognized standards that are met by the manufacturer. electronic developments have moved swiftly in recent years and these are reflected in modern audio visual equipment for professional use. new trends, like 8mm sound and video tape, are also reflected in this review. but standards, like the inventory of 16mm sound prints and existing 16mm sound projectors owned by hundreds of thousands of groups must be considered. when the final choice is made, the buyer will make it after careful consideration of both technical and end-use factors noted. heavy demand from the nation's schools may slow deliveries of some of this equipment in months ahead, but quality and dependability are worth waiting for. finally, the buyer will heed the physical problems of field use in terms of weight, maintenance and service in making his choice.

## 16mm Motion Picture Projectors

16MM SOUND remains the standard for group showings of films throughout the world, fortified by hundreds of thousands of 16mm sound-on-film prints in business, educational and religious film libraries. More than 700,000 16mm sound projectors owned by such groups also build markets for new films and provide audiences.

Today's portable 16mm sound projector features simplicity of threading, faster warm-up of amplifiers through wider use of transistors, some improvement in weight and greater durability in the field: all important to the industrial buyer. For auditorium-size groups there are such machines as the Kodak 25B (either incandescent or arc); the Siemens 2000 has special appeal with its optical-magnetic features. As ever, reliability of the manufacturer and service in the field are important factors to remember when you buy.

Eastman Kodak "Pageant" Sound Projectors have fully transistorized sound systems. These engineered "AV" models also have single-lever operation. Write Eastman Kodak Motion Picture & Education Markets Division for complete literature.

Movie-Mate Convertible Model CV-4 is a 26 lb. portable 16mm repeater sound projector also fully equipped for conventional showings on its 2000 detachable arms. For continuous use pop-out 9" x 12" Polacoat screen; 50 to 500 repeater magazine capacity. Available on Rental Lease. Write Movie-Mate Corp. Listed on p. 61.

Kalart/Victor Series 75 Sound Projectors (and the 70MC3) are the latest from this pioneer equipment maker. Series 75, with built-in film protection, features snap-out reel arms, exclusive safety film trips, air-conditioned film gate. Model 75-15 lists at \$620; 75-25 @ \$725. The 70MC uses new GE Marc 300 lamp in a lightweight, compact unit to produce up to four times the screen brightness of standard incandescent projector lamps. Available in two models: 70-15 MCR at \$1,225; 70-25 MCR at \$1,330.

Bell & Howell's Model 552 Special load Filmsound provides automatic threading of 16mm sound films. A guide system permits insertion of top within 3 seconds; it glides into position, completely threaded. Weighs 13 oz.; it has f. 1.4 lens. Write Bell & Howell see p. 61.

Graflex 16, 800 Series Sound Projector is the company's latest in this field. It features automatic 2-3 blade shutter to make possible extra screen brightness or sound (2 blades); minimum flicker at silent (3 blades). Hi-fi sound is provided by woofer and 4" capacitor coupled speaker system in lift-off side cover. easy loading film drops in slot over head; master control lever forms it; head; sets perfect loop automatically. Write Graflex, Inc. See page 61.

RCA's new "1600" Sound Projector offers auto threading as optional on purchase to be installed at later date. The "Safe-Threader" automatically carries film leader through the projector, without damage. It never touches the film. Other features: advanced optical system; fully transistorized sound (speaker mounted in case); top-mounted reel arms; plus exclusive fluid clutch overwind tension on any size reel. It is standard step-on-frame model. Weighs 32 pounds. Write RCA Instructional Electronic Products.

## 8mm Motion Picture Projectors

THE 8MM FILMS for both cartridge-type sound and 8mm silent-type equipment as well as extreme simplicity and portability of machines now available are adding momentum to this dimension. For internal networks within business and industry, 8mm has definite advantages. Super-8, the new dimension introduced by Eastman-Kodak, has been adopted by equipment makers as Techni-

Red Mark V 8mm cartridge-load sound projector, this company's latest model, is designed to show speaker in rear.

color and this maker has also recently built a catalog of the growing number of "single-concept" machines available for 8mm silent projection. Sound on 8 was largely neglected until the introduction of the new Jewlex Optical 8.

Design and engineering studies for optical-8 are now underway on the part of Kodak so a further trend can be expected in that direction. Recent reports from abroad indicate worldwide international interest in 8mm sound. For international machine use, companies have acquired both 8mm silent and sound machines and realize impressive savings. When a sufficient number of machines is in the field, markets have been developed for print and rentals.

A clear picture of the "State of the art" awaits the future of optical v.s. magnetic sound; standardization of the dimension and a steady increase in the number of film subjects for this equipment. Such factors need not affect any internal of such excellent machines as Fairchild (cartridge sound) or Technicolor (cartridge silent). •

8mm Optical Sound Projector was designed to use this principle of optical sound film. Amplifier has solid-state circuitry; automatic control via keyboard panel. Forward and reverse operation. Single case contains all components.

Fairchild's Mark IV 8mm projector has a trade trade load cartridge film projector with Movie Pak cartridge film and built-in front sight. When lever is depressed, the viewing beam is directed to screen. Auto stop circuit and other features provide continuous program. Weights 20 lbs. Capacity up to 22' of film at a time. Write Fairchild Industrial Products (see p. 61).

Technicolor "Instant Movie" Projector, the Deluxe 810, is a Super 8 silent film projector with a new Super Brilliant Light System using a low voltage lamp and dual output transformer to allow choice of normal brilliance with 500% increase in lamp life or 40% increase in light output with normal lamp life. Deluxe 810 also has still picture clutch and cartridge-loading.

Technicolor "Instant Movie" Projector, Model 260: expert version of the Model 510, is a Super 8 silent film projector designed for operation on 110-120 volt, 220-230 volt and 240-250 volt 50 cycle electrical systems.

## The Right Screen Makes the Show!

PICTURE QUALITY finally depends on the right screen to display the excellent color images from today's motion picture, film-strip, slide or overhead projectors. Fortunately, the user has a wide choice of models, ranging from electrically-operated ceiling screens to quick-opening tripods and handy wall type screens. Both beaded and matte-white as well as silver finishes are available.

Rear-projection screens merit special consideration because of the growing number of projectors and the trend toward "built-in" training and presentation centers.

At least one material maker (Polacoat) has given special attention to this material and their "Len-screen" is being specified by manufacturers as well as builders of rear-screen presentation facilities.

Handy table-top screens, such as those created by Hudson Photographic Industries and Richard Mfg. Co., are worthy of note where office and plant showings demand quick set-up. At the opposite end of the projection line are "built-ins" for standard projection such as Da-Lite's Executive Electrol where the touch of a button brings a fine surface into view.

Hudson Photographic Industries "Super 8" Editron was designed to serve as both a film editing workshop for this new dimension and as a table-top projection viewer which does not require any room darkening. It has a 3 x 4 inch viewing screen for viewing contact film, notches for timing frames and scene timing scale. Use it on either 110 or 240 volts. Write HPI for data, see p. 61.

Da-Lite Screen Company, featuring the Executive Electrol, is a fully automated electrically-operated screen which is completely portable with built-in carrying case. Features include screen with screen size of 50 x 50 inches, 12 inch depth. Da-Lite White Magic Screen Co. also has beaded and matte white screen with built-in carrying case. 50" x 50" size at \$55. Write Da-Lite Screen for data, see p. 61.

Radiant Mfg. Corp. has an Audio-Visual Line of projection screens which includes the Clearmaster (two different models) or the Educator (both are wall models). Educator's screen surface is silver-ventricular Optiglow; Clearmaster has matte white surface. Write Radiant. See page 61.

Richard Portfolio Screen comes in a plastic zipper case for quick set-up. Screen size of 11 x 2 1/2 feet. Matte white screen surface; flap protects screen when closed. Navy blue flats at \$5.95. Write Richard Mfg. Co. for data. See page 61.

Below: Polacoat Incorporated manufactures the widely applied Len-screen rear projection screen material used in many current projects of this type. The material is also available in larger dimensions for "built-in" rear projection installations. For data, see the publication "Wall Lenses and Fronts for Training" available from Polacoat Inc. See page 61.

# AudioVisual Equipment TradeFair

# Filmstrip and Slide Projectors

## Sound Slidefilm Projectors

DuKane's "A-V Matic" Model 4A285D is a self-contained sound filmstrip projector that features a new program and control start button at any time. Automatic operation when the arm is placed in the program operation. A-V Matic also has remote control, bright images, fine-tuning and Red-White which automatically reverses the filmstrip for reverse screen size 9 x 7. Weight: 17 lbs. Write: DuKane Corporation. See page 61.

DuKane's "Micromatic" is a big-screen sound filmstrip projector or can be used for group shows or a desk-top. Also features program "Hold Control" and now projects 2 x 2 slides as well as strips. Write DuKane Corporation. See page 61.

Elco Corporation's "Mastermatic I" is a low-cost sound filmstrip projector. It features Uni-pack cartridge filmstrips with magnetic sound (tape) in single snap-in, neither blowing. Synchronized 14" sound tape can be changed at will. A featured "repeat" control for operation as an exhibit. Control panel projection for rear projection. It can be changed to front screen use up to 25" film frame and 15" motor film and in the Uni-pack cartridge. Priced at \$350. Write: Elco Corp. See page 61.

Beseler Company's "Salesmatic" filmstrip projectors have Flipmat front and rear projection, uses 35mm film cartridge and sound is on magnetic tape. Weighs 19 lbs. and can be taken away in 10 mins. Available in 16mm and 35mm. Picture Partner / or Long Play models. Write: Beseler Co. See p. 61.

automotive dealers has long been "standard" for sound slidefilms.

Rear-screen projection is popular for counter demonstration and desk-top showings and there are several excellent machines with this key feature, quick to setup and ready to show on their own built-in screens. Conventional showings for larger groups may require larger units with increased sound output and larger lamp voltages. Year after year, manufacturers of this type of equipment have steadily improved their models. Simplified threading, "automatic" rewinding of strips, cartridge-loading are all useful recent features.

Service through reliable local dealer facilities remains important to the buyer. In addition to representative models on this page, check the McClure Projectors' line. It's worth noting that this medium has important advantages for education and training.

LaBelle's "Courier" sound filmstrip projector is a battery-powered, lightweight, self-contained size, uses 1.5 volt dry nickel cadmium batteries, power source pack will run for 10 shows per day. Has built-in cut-out, tape cartridge and film can run 15 minutes of sound; up to 150 feet of picture. Write LaBelle Industries, Inc. See page 61.

TRAY-LOADING and simplicity of operation are key factors in the design of the latest 2 x 2 slide and 35mm filmstrip projectors. Variations in design have brought vertical and horizontal models but the common denominator is screen brightness, safe transport of material and either manual or semi-automatic operation, as you prefer.

New models being displayed at current trade shows are featured on this page; capacities vary but the principle of reliability should be paramount for the business user of this medium. Bell & Howell's new "Monitor 960" slide projector has its own built-in preview screen plus automatic electric-eye focusing and 100-slide capacity on its upright rotary tray. Kodak's widely-popular Carousel offers a new "AV" model (see illustration) and the company has introduced several useful accessories (see other pages) such as the Motion Adapter and a Sound Synchronizer.

The business user will do well to avoid the lower-cost, amateur slide projectors in plentiful supply. These won't hold up under field conditions and, more important, *won't deliver the kind of image quality you'll want* for sales or service demonstrations and meetings.

Where slides are the medium for your presentation, you can choose from small group models all the way to the "giants" such as Genarco's 3,000-watt 3 1/2 x 4-inch slide projector with its electric changing system or Strong Electric's brilliant Xenon slide projector, for this larger-size slide. These latter machines are for *permanent booth installation*. In the field you'll want *portability and durability*.

The Honeywell Rondalle 100 is a self focusing slide projector of vertical design; has 100 slide capacity; fast setup. Magnetic action slide changing rapid but handles fragile slides with care. Has self focus. Edit Preview gate makes tray loading or manual projection easy. Write Honeywell. See page 61.

Bell & Howell's "Monitor 960" slide projector has a built-in preview screen, see your slide before you project; slide rotary tray; electric-eye auto focus; instant editing; automatic slide film remote control. Bright 500-watt lamp. Bell & Howell quality. Write BBH.

Kodak's Carousel AV-900 is the latest model of this widely-popular slide projector. It has control buttons on the front as well as remote control cord; weighs less than 11 lbs. Use it for continuous, extended display operation, too! Two-hour sand-hour motor will run eight months continuously eight hours per day. Write Kodak. See page 61.

Bell & Howell "Specialist Autoload" slide projectors feature cartridge loading; you never touch the film; it advances by push-button remote control. Powerful jet stream eliminates dust.

Below: for big screen slide projection 3 1/2 x 4" slides, industry turns to permanent like the Strong Xenon light projector shown here. Osram 900-watt Xenon bulb delivers up to 9,000 lumens through slides. Write to Strong Electric Corp. See page 61.

## Rear-Screen Slide Projection

ASUAL DISPLAYS as well as training classroom use may rear-screen projection of slides. There's been marked improvement in image brilliance and operation when designers combined good new cabinet with today's better slide projector or motion picture equipment. Several are presented on this page.

The Busch Cine-Slide Projector (built from built-in Kodak Carousel slide projector) on built-in 14 x 14 TV type screen. Operates manually, remotely, automatically, or continuously. Also useable for standard projection on external screen. Weighs only 30 lbs.; a 5' lens is optional for rear-screen, conventional projection. Write Busch Film & Equipment. See page 61.

The HPI Caritel is a rear-projection cabinet with a 14" square screen that converts a slide, filmstrip or motion picture into desktop, daylight viewer for individual or small group use. It has great portability; folds up to one-inch thick in 15 seconds. Uses HPI's "Daylight Be" plastic screen which helps carry-away effect of projector lamps. Write HPI Photographic Ind. See page 61.

and you have automatic visual displays operating continuously. Or use them for demonstration by manual control, showing charts, machine operations, etc. Good choices for this section are the Busch Film & Equipment's Motiva's "Projection Theater" and the Roto-Slide, which employs a Sawyer mechanism. Also worthy of mention are the favored Admatic (a Harwald product) and custom cabinet modeled by Busch.

You can have these machines housed as well as slide images on continuous filmstrips, motion pictures, etc. Cartridge-type tape readers are accessories for this purpose and can be adopted to a number of rear-screen cabinets.

**Projection Theaters** (Model RPT-50 is pictured) handle slide, animated slide, film and sound presentations in fully-enclosed, compact, self-contained cabinet which will house Kodak Carousel, Technicalor 8mm, Instant Movie Projectors and the Cousino Audio Synchron-Repeater sound (tape) system. An 18 x 18 glass Polacoat screen has special anti-glare coating (show at wide angle in normal room light). Single-piece aluminum construction weighs under 20 lbs. Choice of pedestal bases as accessories. Write Projection Theaters. See page 61.

Roto-Slide has a 14 x 14 rear projection screen, 100 slide capacity, built-in 4 x 4 speaker, is ready for connection to a tape recorder for sound with pictures. Takes only 17" of counter space and has a life (200-hour) projection lamp with steady, 400-watt illumination. Write John A. Grant & Associates. See page 61.

Admatic, cabinet-type rear-screen slide projectors, are available in either continuous silent or with sound. This manufacturer (the Harwald Company) provides Admatics on lease or outright sale basis. Call or write Harwald for data.

## Special Lenses & Accessories

OPTIONAL LENSES provide for extreme wide-angle showings; help meet other projection problems such as long rooms, rear-screen showings. Other accessories worthy of recent note are Kodak's Sound Synchronizer to combine Carousel slide projection with taped sound and the Motion Adapter pictured (right). They're worthy of consideration.

Buhl Optical Company specializes in making special lenses. The ECU (pictured) is for extreme close-up projection; other models aid in long and short throws.

## AudioVisual Equipment TradeFair

Kodak's Motion Adapter, an accessory for the company's Carousel slide projectors, makes it possible to introduce animated images into slide presentations. System is comprised of specially-prepared slides and a rotating spinner. Each slide carries several polarized images, each with a different polarity. Selectivity polarizer spinner allows each image to be projected in sequence to provide illusion of a single image in motion. Good for showing flowing liquids or rotating gears, distinct movements, hand-shaking, etc. System is based on techniques developed by Technicolor Animations (trademarked Technimation) and a source of motion slides. The adapter is available from Kodak Audiovisual dealers. Write Eastman Kodak. See page 6.

## Program Control & Random Access

MULTI-SCREEN presentation is a trend in today's business film use. Helping meet that need are tape-control devices such as the DuKane Electronic Programmed picture below. Another need in industry and government is for random-access to growing slide libraries. Both Decision Systems and Spindler & Sauppe offer these items.

DuKane Custom Electronic Programmer, a new tool which provides organized, extremely accurate way of operating multi-screen combinations of film strips, slides, motion pictures, and tapes, all operated from the Programmer. Fully automatic sequences can be set up to run by themselves at touch of start button. Uses 8-track punch-tape reader that will also organize and control lights, curtains, room light, and screen as well as projectors. Produces rapid picture advance when required. For data ask DuKane Corporation. See page 61.

Below: Dial-A-Slide Random Slide Projector gives instantaneous random access to as many as 160 slides (in less than average of 2.5 seconds). Model 60 utilizes exclusive random access selector and automatic device by company and includes two models and Kodak Carousel AV 900, and a fade-dissolve control unit. 14 mm. and later film projector which slides will be projected from a slide with up to 160 slides. Write Decision Systems. See page 6.

Selectroslide random-access equipment widely used by industry and government where this application is required. The maker, Spindler & Sauppe, of Gardale, California, furnish complete technical literature on various models and on the Selectroslide standard machines. Write the manufacturer's source on page 6.

Overhead Transparency Projectors

INVESTORS LEARN market facts, industrial trainees get data on new processes and architects show builders and buyers their new designs—all via overhead transparencies. This flexible medium has gained momentum from new preparation materials; it has won stability and presentation quality through steady design and engineering improvement (especially in screen brightness).

Current models being shown by leading manufacturers of overhead projectors are featured on this page. The user will find that such features as coolness, lamp and screen brilliance, portability and convenience are the key factors to consider in making his choice.

"Standards" among the makers are such companies, listed alphabetically, as American Optical, Beseler, Buhl, Graflex and Wilson. The training director knows the value of overhead transparencies; so do financial officers who use this medium for factual displays of company trends. Within recent months we've seen a variety of applications ranging from the Bache & Co. "Investment Seminars" to a railroad's program featuring signals for training brakemen and engineers. Industrial, medical and commercial uses are growing. •

Apollo 6 Overhead Projector from American Optical Company delivers 2,200 lumens of screen brightness for transparent illumination. Has 0.4:10 aperture and 5.5" light path for true distance. Tilting head is mounted on convenient corner post. Quiet-power control system keeps platen cool. Apollo 6 has 8 1/2" x 11" built-in transparency holder supplied with 600-watt Quartz Iodine lamp. Write American Optical Co. See page 61.

Graflex OH-2000 is a new model from Graflex Inc. with Photo White picture brilliance at low operating temperature. Features focusing touch-tilt control of mirror mount and portability. Provides up to 2,000 lumens with 25-hour DVY lamp. Designed to accept Graflex four-way Roll-Away attachment. Write Graflex. See p. 61.

Graflex 3000 Overhead Projector—earlier model—has same features of "2000" above. Write Graflex Inc. for data. See page 61.

Wilson Model 2200 Overhead Projector takes its name from the 22" picture brightness. True optical picture magnification for all lenses and angles. Features constant coolness and 16 1/2" picture portability. Light is spread over 22" screen with no hot spots. Write Wilson Corp. See page 61.

Buhl Model 80 Overhead Projector has an adjustable variable frame lens. Delivers 2,000 lumens on screen; features extra cooling from dual fans. Write Buhl Optical Company for data. See page 61.

VIDEO TAPE RECORDERS have come into size and price range suited to wider application in business and industry. Where internal training programs make this tool appropriate, top-quality manufacturers like Ampex, etc., now have portable VTR units. Also striving for a market tied in with home television sets, video tape equipment companies are making progress toward lower-cost tapes. It's still a black and white medium, with color promised in a year or so.

The Sony Videocorder is typical of low-cost monitor-recorder combinations now available. Added accessories such as a video camera and microphone complete your "TV Production" studio for limited internal use. But larger installations, such as Eastern Air Lines, have also made news in recent months. All maintenance bases of that air transport company were equipped for video training production.

In addition to the representative models shown on this page, other makers like General Electric and RCA, have video equipment for closed-circuit installations. Start a file on video tape and keep it active. Developments are moving fast in this medium and as tape and machine cost goes down, applications in business will increase. Key factors to note: quality of the recording head; service facilities in the field; cost of tapes and their capacity in running time. •

Ampex VR-7000 priced at \$3,150 professional videotape recorder for circuit use in education and business. 78-lb. unit records at tape speed of 1 1/2 inches per second, using one-inch Ampex Series 147 video tape. Horizontal resolution of 310 lines for high picture quality. Records up to 63 minutes picture and sound on a 3,000-foot video tape. Write Ampex. See page 61.

Wollensak VTR-150 Video Tape Recorder is a 3M Company product available in two package concepts. Recorder is priced at \$1,495; mobile console package which includes recorder, camera, Scotch video tape, camera, television receiver, microphone headset and accessory cords is "less than \$3,000." Tape hour of recording time is \$39.95 for 1/2" (1/4" ft. roll.) Write 3M Company for details. See page 61.

Sony's Home Videocorder tapes both light and sound on 1/2" video tapes; weighs 66 lbs. Simple to operate with controls similar to average audio tape recorder. Has own 8" TV monitor which receives regular UHF and VHF broadcasts; is capable of transmitting both video and audio signals to taping mechanism. With addition of video camera and mike record your own tapes. Write Sony Corp. of America. See page 61.

For up-dated data on all audio-visual equipment, look to those New Products Pages in every issue of Business Screen Magazine.

Special-Purpose Projectors

Model 224-Athena, offered by L.W. Photo, Inc., Van Nuys, Calif., is a re-engineered version of the Kodak Pageant 16mm sound projector for 16mm stop-motion use at 24 fps. with sound, plus pre-selected speeds of 2, 4, 6, 8, 12 and 16 fps. without sound. All frame rates are without flicker, forward or reverse. Film may be stopped for still picture viewing or single framed by push button control. All functions can be controlled by hand held remote unit. Write the manufacturer for detailed technical data on the Model 224.

## Film Handling & Film Inspection

PRINTS are the key to perfect presentation of important programs; today's electronic inspection machines are also vital to maintain showmanship and services to the user. If film program is important, invest in equipment to maintain it.

**Neumade's CL-16 Neuvator Film Cleaner** for cleaning, repairing, polishing and rewinding of 400 ft. through 2,000 ft. 8mm reels with 1/2" and 1/4" driver operation. Film runs through bath past three rollers of dilute isopropyl alcohol which remove all dirt or foreign matter and excessive liquid without film damage. Dry and clean film is rewound on take-up reel. No sprocket teeth or impossible to damage film. Mercury switch for auto operation immediately on completion of reel or in case splice cart. Write Neumade, p. 61.

**Simplex 404 Film Inspection** machine a new automatic unit developed for film libraries and TV stations. Only 34 lbs. Features same film head used in larger machines. Automatically stops and reverses itself when defect is reached. Priced at \$875. Write Simplex, p. 61.

**The Harwald Company's "Inspect-O-Film"** line of electronic film inspection equipment has earned a reputation for high quality and variety of features. Write the maker for complete technical literature.

## Film & Filmstrip Shipping Cases

SHIPPING CONTAINERS of either fibre or plastic are moving thousands of film prints and negatives at night. The fibre container (like Wm. Schuessler and Co. products) have proven lines of excellent durability. And there's the trend toward plastic cases (see Plastic Reel for movie pictures). Now plastics also rule the filmstrip field (see Plastic Reel).

**Plio-Magic film containers** have been extremely popular for 16mm and 35mm film shipping. They're available in 1, 2, 3 and 4-reel sizes for 1,600 ft., 2,000 ft. and 2-reel sizes for 1,200 and 2,000 ft. reels and in one-reel size for 400, 600 and 800 ft. reels. Write Plastic Reel Corp. of America for complete details.

**Poly-Cons** (poly-fused wax polyethylene filmstrip containers) available in a wide range of colors and in two basic sizes. Ask Richard Mfg. Co. for complete details.

## The Wide, Wide World of Sponsored Films

American Bible Society Observes 150th Anniversary With New Film . . . *Faith for Every Frontier*, a new color motion picture created in honor of the 150th Anniversary of the American Bible Society, is now available for adult community organizations and church groups on a free-loan basis. The 51-minute film traces the history of the American Bible Society and the work that it is doing all over the world in translating, publishing and distributing the Scriptures.

Narrated by Alexander Seourby, the film is presented as a public service of the American Bible Society and distributed nationally by Association Films. It was produced by Owen Murphy Productions.

*Faith for Every Frontier* begins with the founding of the American Bible Society in 1816 and traces its growth and expansion in response to the increasing need for its service. The film highlights the ways in which the Society brings the Word of God to millions both in the United States and in 150 countries around the world.

The Society's training in Bible translation, Bibles for the blind, distribution programs for servicemen overseas, and Bibles for people in remote regions of the world, are among the many services presented in the film.

\* \* \*

"Bridging the Seas" Pictures the Work of the U.S. Merchant Marine

*Bridging the Seas*, a new film about the United States Merchant Marine and the important role it plays in peacetime trade and national defense, is available for TV programming. The 27½-minute color film is presented by The Propeller Club of America and distributed by Association Telefilms, a division of Association Films.

The film briefly traces the history of the Merchant Marine highlighting some of the functions it has performed since World War I. Focusing on all types of ships from freighters and passenger liners to the newest in container cargo ships, the film points out how our Merchant Marine serves in a variety of areas and has become a vital part of our economy.

The influence of the Merchant Marine in opening up the states of Alaska and Hawaii and the importance of the Great Lakes fleet in providing cheap transportation for the raw materials of our steel industry are shown, as well as the

luxurious accommodations of her ocean liners and the latest nuclear-powered ships, hydrofoils, and the fascinating hover craft.

Aluminum's "Many Faces" Shown in a New Bureau of Mines' Film

The methods used to produce one of man's most versatile metals are explained in *Aluminum: Metal of Many Faces*, a new 28-minute 16mm color motion picture sponsored by the Aluminum Company of America and now available on free loan from the motion picture library of the U. S. Department of Interior's Bureau of Mines.

Early scenes of bauxite mining are followed by animated sequences combined with live-action photography to depict the method by which a compound of aluminum and oxygen (alumina) is first extracted from ore. Then, hydroelectric power is shown as the key which unlocks this compound to release aluminum in metallic form.

The properties that enable aluminum to serve many important uses in contemporary life are explained in sequences which show how the metal can be drawn, rolled, extruded, welded and squeezed into virtually any desired shape. Its corrosion resistance, electrical conductivity, heat-reflectivity and other properties are explained.

The new picture was produced by Continental Film Company, Cleveland. Free loan requests should be directed to: Graphic Services, Bureau of Mines, 4800 Forbes Avenue, Pittsburgh, Pa. 15213.

"Nature's Golden Touch" Shows Lubricants from Well to Users

The Kendall Refining Company has released a 20-minute 16mm color film titled *Nature's Golden Touch*, telling the story of oil from extraction to the finished product for automotive uses.

Highlights include scenes of an oil well being "shot" with nitroglycerine as seen from both the air and ground and details of lubricants research and development. The film explains often misunderstood "whys" of lubrication in an informative and meaningful fashion. Free loan prints are available for group audience showings from Jack Eastman, Kendall Refining Co., Bradford, Pa.

BUSINESS SCREEN MAGAZINE  
7064 Sheridan Road, Chicago, Ill. 60626

(CONTINUED FROM THE PRECEDING PAGE 20)  
 Chicago business circles, led to the founding of the Industrial Audio-Visual Association conference room. IAVA's past national president, "Pete" Peterson has been accorded the association's highest honor: the Award of Merit. But what that citation didn't declaim were those countless hours of tireless service and dedication to the ideal of more effective communication, within his company — and hundreds of others.

A working participant in the Audio-Visual Society of the Association of National Advertisers, Pete has written and spoken extensively on a-v communication methods and devices. A longtime member of SMPTE, of Eta Sigma Phi and the professional education fraternity, Phi Delta Kappa, he has also been active in many Chicago civic and charitable organizations.

The native of Rock Island attended Augustana College there, was graduated from Huron College and did graduate work at the University of Chicago. Pete and his wife, Constance, reside at 7661 S. Coles Avenue, in Chicago. We're looking forward to the next five years when he expands his horizon into the worlds of interest — knowing full well that he must include the field he helped to pioneer: audio and visual media. —OHC

*Bringing the Film Medium to the People:  
 Modern Puts Cinema on Delaware Bay Ferry*

Travelers on the Cape May-Lewes Ferry crossing Delaware Bay are now watching free movies during the 70-minute voyage. All during the summer season Modern Talking Picture Service will be experimenting with a 15-minute show during each of eight daily crossings between North Cape May, N.J. and Cape May, Del.

The ferry, which connects two popular resort areas, has a high proportion of "pedestrian" passengers as compared to car-borne passengers,

*Ferry passengers enjoy travel films enroute.*

Thus there are a large number of people regularly sitting in the main lounge where the Modern Cinema has been installed. Thus far, the movies have consisted of about 50 persons each showing.

Travel films have been featured for the summer part. On northbound crossings, New England films are often shown, while on southbound trips, films on the beauties of the Carolinas and Virginia have been popular.

**DA-LITE**

*Executive Electrol*

First of all, it's completely automatic—goes up and down at the touch of the switch. In fact, the sensational Da-Lite® Executive Electrol® goes completely out of sight because it recesses into the ceiling and provides its own automatic ceiling closure. Plenty of other features, too, including heavy-duty gear motor; aluminum roller with die-cast metal end caps; and choice of Da-Lite's magnificent White Magic® "Chemi-Cote"™ glass beaded surface, or non-gloss mat white. Sizes? From 50" x 50" up to 12-foot square. No wonder Da-Lite's Executive Electrol is the ultimate in projection screens for executive suites, conference rooms, small auditoriums and fine homes. Write for specifications, prices and name of nearest franchised Audio-Visual dealer.

## What's so special about Da-Lite's new Executive Electrol? See for yourself!

## Movielab President Proposes Lab to Serve Israel, Turkey, Greece

The establishment of a modern color film laboratory, operating under common market principles in the Near East, to service the joint motion picture and television requirements of Israel, Turkey and Greece, has been proposed by Saul Jeffee, president of Movielab, Inc. Jeffee recently returned from a series of overseas meetings relating to the expansion of Movielab facilities abroad.

All three countries, Jeffee revealed, are eager to stimulate local production of theatrical, television and educational film and to attract foreign motion picture companies with their locales and facilities. While this trend is accelerating the need for a color laboratory, none of these countries can, in and of themselves, keep a modern color laboratory in full operation with their domestic output, he explained.

Now under active consideration is the Jeffee recommendation calling for a "joint common market operation" with one processing laboratory situated at a point geographically accessible and readily available without restrictions to the film industries of all three countries. Movielab technicians would furnish the know-how for efficient plant operation with long range plans calling for the training of Israeli, Turkish and Greek laboratory assistants at the Movielab plant in New York on adoption of the plan.

The suggestion has aroused the interest of film industry people and government officials in these countries and discussions will continue toward realization of this project. The lowering of barriers and the encouragement of a co-operative venture to foster the domestic film efforts of these nations would be most significant from the political as well as the business viewpoint, the Movielab president observed. If the plan proved workable, Jeffee concluded, it could hopefully be extended and made applicable to other Middle East countries.

## Foreign Language Cinema Service Creates 10 New Overseas Versions

Activity of the past two months at Foreign Language Cinema Service, Hollywood, has resulted in completion of ten different language versions of eight film produced in English. Five language were involved.

The pictures are *Winds of Change*, Douglas Aircraft Com-

## News Along the Film Production Lines

pany, Inc., for Air Afrique, into German; *Islands of the Trade-winds*, Douglas, for U.T.I., into French; *Live Via Early Bird*, Communications Satellite Corporation and Douglas Aircraft Company, Inc., previously done in French, Spanish, Italian and Japanese, into German; *Sabreliner*, North American Aviation, Inc., into German for use at the Hannover Fair.

Other notable titles included: *Before Hydraulic Fires Start*, Monsanto Chemical Company, into Portuguese and Spanish; *Working with Skydrol Fluids*, Monsanto (Cate & McGlone), Japanese and Spanish; and *Tales of the Border* and *Monkey Business*, two short subjects by Jerry Fairbanks Productions in which animals talk, lip-synchronized in Spanish. •

## Hollywood Film Enterprises Adds Ektachrome Processing Equipment

Hollywood Film Enterprises has completed installation of equipment for processing Eastman Kodak's new Ektachrome EF films—16mm Daylight Type (7241) and 16mm Type B (7242). Both films are improvements over the old ER stock, with all colors more brilliant and more saturated, and a wider exposure latitude.

EF Daylight is reported "ideal for all daylight applications calling for short exposure times, or low light levels or extreme depth of field." It can be pushed three stops under and one stop over with very little sacrifice in graininess, sharpness and true color quality.

EF Film Type B is balanced as a universal high-speed color film

for color TV news. It may be used indoors without a filter, or outdoors under daylight conditions with suitable filter conversion. Its normal index is 125, but if more speed is needed it can be rated at 500 with very little loss in quality. Good images are obtainable at 1000 and even 1000, according to some technicians.

Type B in the new EF Film has wide application in such industrial uses as engineering sequential studies, high-speed performance evaluations, schlieren studies and general in-plant cinematography. It has special usefulness for theatrical and non-theatrical work where the light level is extremely low or when extreme depth of field is required. The film also is compatible with magnetic prestriping, single system or voice-over synchronization, HFE provides fast service in processing the new Ektachrome EF Films.

## F&B/Ceco Cites Producer Growth in Annual Equipment Rental Report

Following established practice in the auto and truck rental fields, F&B/Ceco, Inc. have announced an "Annual Rental Plan" which this motion picture equipment supplier says will enable producer to rent production gear at substantial savings over regular rates.

Annual rental of equipment includes free maintenance and placement service as well as full-time equipment possession by the renter. According to F&B/Ceco spokesmen, this "permits more accurate budgeting, eliminates transportation time and charges and does away with repair bills. In addition, they note, there are major tax advantages and freedom from equipment obsolescence.

An optional part of the plan includes purchase of production existing gear and its replacement with new equipment under the Annual Rental Plan. A brochure on the rental program is available on letterhead request from Ron Groen, F&B/Ceco, Inc., 315 West 43rd St., New York, N. Y. 10036.

Canon Kalvar's Desk-Top System  
Instant Black & White Slides

A desk-top system for making  
expensive, instant black and  
white duplicate slides without  
film or chemicals has been  
developed by Canon U.S.A., Inc.,  
New York.

The Canon/Kalvar system uses  
special film which is not sensitive  
to ordinary light and is processed  
by controlled heat instead of  
chemicals.

Each duplicate costs less  
than a cent unmounted, or less  
than five cents with the self-adhesive  
slide mounts made for instant  
knowing of the slides.

The Canon/Kalvar Instant Slide  
System consists of two desk-top  
units. The first is the printer,  
which accommodates either a six-  
inch 35mm strip or a microfilm  
reel card. The desired length  
of Canon/Kalvar film is placed in  
contact with the original and exposed  
with the built-in ultra-violet  
light. The film is then inserted  
into the developing unit which  
automatically applies the correct

amount of heat to form the image.  
The completed slides can be  
projected immediately, thus by-  
passing conventional laboratory  
processes. Canon Kalvar negatives  
can be enlarged in the same man-  
ner as any standard 35mm nega-  
tive.

Both the emulsion and base of  
Canon Kalvar are totally differ-  
ent from conventional films. In-  
stead of the image being formed  
by silver, microscopic bubbles are  
brought into an image-forming ar-  
rangement by the heated rollers in  
the developing unit. The base,  
made of a tough polyester, is im-  
pervious to heat. The final film is  
virtually immune to scratches and  
can be washed with hot water and  
soap if ever necessary.

Resolution is 140 lines/mm,  
more than twice that of standard  
silver haloid films.

The complete Canon Kalvar  
system, including printing unit, de-  
veloping unit, film magazine with  
a 550-foot capacity (about 4000  
frames), one 110' roll, a supply of  
mounts and a magnetic film hold-  
er, lists at \$195.

Further details can be obtained  
from the U.S. distributor, Canon  
U.S.A., Inc., 554 Fifth Avenue,  
New York 10036.

## For trouble free projection all year 'round

### IT'S THE NEW KALART/VICTOR SERIES 75 PROJECTOR

No other projectors offer greater protection  
against costly film damage, worry-free main-  
tenance and brighter, better pictures than the  
dependables from KALART/VICTOR. And now  
a new dependable—the Series 75 Projector—  
with exclusive film safety trips and snap-out  
reel arms—completes this reliable line of  
rugged, hardworking 16mm projectors and  
audio-visual equipment. For quality projection  
techniques, the new 75 is your best teaching  
tool—for education, information or training!

**OUTSTANDING FEATURES:** EXCLUSIVE SAFETY FILM TRIPS • SNAP-OUT REEL ARMS

## BE THE FIRST ON YOUR BLOCK TO OWN AN ONDIOLINE ALBUM!

WHAT'S AN ONDIOLINE? It's only the newest,  
freshest scoring sound around!

Electronic music... and we mean *music*, not noise... that  
will *unsquare* your films, and commercials.

The Ondioline is an unusual instrument that makes strange  
and beautiful sounds that just won't fit *every* situation...  
but where they *do* fit... it's the difference between being  
merely with it... or ahead of everyone else!

Judge for yourself...  
send for tomorrow's sound today.

I'm no square!

Rush me  
my copy of  
Musique Electronique  
du Cosmos.

## Equipment Tradefair

### "OH-2000" Overhead Projector

#### Joins Graflex Audio-Visual Line

The Graflex OH-2000, second in a series of high-performance overhead projectors from this manufacturer, has been announced by Graflex, Inc. Features include bright images at low operating temperature, fingertip focusing, touch-tilt control of mirror elevation and light weight. The new unit incorporates a special transparency position device on the platform and accommodates the new Graflex four-way directional Roll-Feed attachment.

The OH-2000's illumination system provides up to 2,000 screen lumens with a 25-hour ASA DVY lamp. It weighs only 22 pounds. Price is \$185. Write: Graflex, Inc., 3750 Monroe Ave., Rochester, N. Y. 14603, for data file or include in your literature request to our New Products Desk at BUSINESS SCREEN.

### Modified Bolex H Tripod Offers Greater Range, More Stability

Paillard, Inc., has announced modification of the Bolex H Tripod to provide greater range in accommodating cameras, more stability, simplified mechanics and extended versatility. For firmer support, the camera platform of

Modified Bolex H Tripod

the panhead has been enlarged to the size of the built-in Bolex H camera base. Replacement of the chain with three removeable wedges to lock the spread is another important modification. The improved tripod is available at Paillard, Inc., 1900 Lower Road, Linden, N.J.

\* \* \*

### Canon "Scoopic 16" Camera Has Auto Exposure, Built-In Zoom

A new professional 16mm motion picture camera, the Canon Scoopic 16, combines automatic CdS exposure control, a built-in 13-76mm zoom lens (with through-the-lens reflex viewing), electric

drive and automatic loading being offered by Canon U.S.A. Inc.

\* \* \*

### Universal Geared Base System Now Available for Arriflex 35

An advanced Universal Geared Base System for all Arriflex motion picture cameras, now providing advantages in ease of use and reduced noise level, has been announced by the Arriflex Corporation of America.

The Universal Geared Base System around which the system was developed features a new locking arrangement by means of which the camera may be locked on or released instantly without tools of any kind.

Arri 35: Geared Base System

The camera is also attached to the base and can be quickly removed from the base by a similar quick-change device, no need for tools.

The new Universal Geared Base System accepts all Arriflex-35 camera motors such as special quick-change 115-volt 60-cycle single-phase sync motor with bayonet lock; special quick-change 24-volt DC governor-controlled motor with bayonet lock; a standard Arriflex 16-volt handgrip motors (variable speed and governor-controlled type) and means of a special reduction gear adapter.

Important design features include a gear train which is acoustically isolated from the base. The camera is connected to the train by means of a bayonet coupling and the motor is coupled to the gear train by a similar connector. As a consequence, noise level is importantly reduced.

The Universal Geared Base System provides a broad flat base for mounting on conventional plate panheads and provides a center of gravity with both AC and DC motor types. Economies result from use of the same base with a variety of motors; some of which may be used in two different configurations.

The Base System is available from all franchised Arriflex dealers.

## projectors for salesmen

**MOVIE • MATE** Repeater, Rear Projector.

Whether you choose the Movie-Mate repeater rear projector, or the Movie-Mite conventional projector, you can rely on the dependable quality that has been progressively built into them for over 25 years. They are compact, light-weight, convenient to use, single-case sound projectors—Big in 16 mm performance yet low in cost.

**MOVIE • MITE** Conventional Projector.

We rent, lease or sell—special low rates on multiple quantities.

## U. S. FILMS COMPETE AT VENICE:

### THE UNITED STATES ENTRIES

Category F: Manpower Training Films

(CONTINUED FROM THE PRECEDING PAGE 19)

**Sunrise at Eastern**, 29 min., color. Sponsor: Eastern Air Lines. Producer: Audio Productions, Inc.

• Demonstrates steps taken to improve the service, operation and image of company.

**Something To Work For**, 30 min., color. Producer: Roundtable Productions, Inc.

• Focuses on problem of motivation from the management point of view.

Category G: Safety Education Films

**Red Light Return**, 14 min., color. Producer: Charles Cahill & Associates, Inc.

• Detailed study of results of automobile accidents using anthropometric dummies to illustrate impact with windshields and ejection of bodies.

## ALONG THE PRODUCTION LINE

### Personnel Changes at Parthenon Reflect Emphasis on Industrial Training Projects

☆ Personnel changes announced by Parthenon Pictures, Hollywood, reflect heavier emphasis on industrial training projects. Executive producer "Cap" Palmer has added Richard Scott, M.D. to his writing staff for the sponsored picture, *Research Environment in Industry*; Bing Russell is handling a 10-subject package on coaching of youth baseball; and Hal Adelquist (New York) is assigned an untitled film for brokerage employee orientation.

Producer David Bowen is completing the Ujohn film, *Chromosome Puff*; Norman Glazer, in completion phase of the U.S. Health, Education and Welfare film on Medicare; and Palmer himself, after research sessions in Washington, is scripting a film on government employee telephone manners for the Bell System.

### Solow Appointed a Full Professor by USC

Consolidated Film Industries' president Sidney P. Solow has been appointed a full professor with adjunct rank in the Department of Cinema at the University of Southern California.

Solow has taught classes in motion picture processing and laboratory procedures one afternoon a week for 21 years and will continue to do so. His service is an inspiration to all.

### Names That Make News Among the Studios

Low & Associates, Inc., Minneapolis-based film producer, has named Frank V. Robinson as a director. He was formerly at Fraser Productions, in San Francisco.

Charles Tapping has been appointed vice-president in charge of administration at Filmack Studios, in Chicago.

Ann Norton has joined Fred A. Niles Communications Centers, Inc. at Chicago. A widely-featured television actress, she will serve as a production assistant, also aiding in sales activities, providing the feminine viewpoint for the studio's films and commercials.

## A Name with a Purpose

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

## Manned Spacecraft Center's Laboratory:

(CONTINUED FROM PAGE 55) ourselves in advance, there are a number of variables to be considered. One of the most important is the proper operation of the space camera. Shutter speeds are checked, f-numbers are verified and if there is still doubt about the exposure, four frames are clipped from a roll and developed. Sensitometry would let us adjust for camera errors if necessary. So far, no Gemini flight film has needed adjustment."

### Advantages of Thin Base Film

Thin base color film is being used in space cameras to get more exposures and cut weight. A 100 foot, 16mm spool can be wound with as much as 140 feet of thin base color film in the MSC laboratory — and only color is used, except where specific scientific experiments call for black and white film.

Processing thin base film is difficult because the emulsion is applied to both sides of the film's base. MSC officials feel that they may make a worthwhile contribution to the civilian film industry through techniques developed at the Spacecraft Center for handling thin base. There have already been some inquiries by independent laboratories.

"Among the more difficult problems encountered processing thin base color film," explained Holland, "is its tendency to adhere to the machine rollers. We tried a number of materials for rollers before our maintenance department finally solved it with teflon. Teflon rollers are now used

in all three sections of the machine and the drying cabinet.

Still another problem common to this type of film is slow drying compared to standard film. Our answer to this was a portable hair dryer. Using the blower and heater unit, we fashioned a pre-dryer under the film — on the roller side — and regulated the heat with a rheostat."

Admittedly MSC's elaborate handling and processing of flight film is a more expensive method than most independent laboratories could afford. But MSC officials feel the results demanded of them justify the cost.

"There is no way to place a value," says Southard, "on Ed White's 'walk' on the Rendezvous of GT-6 and 7 or on the up-coming GT films where an astronaut will be outside his spacecraft for over an hour. We have to be capable of processing this footage."

### Procedures Followed at Lab

All undeveloped film work, motion picture, still or slides — except flight film — enters the Technical Laboratory through the Production Control Department by mail or personal delivery by the photographer.

A three-carboned NASA Photographic Work Request is filled out with the necessary information regarding size, number of copies, print finish and other appropriate data. A copy is attached to the film container to stay with the film until it leaves the laboratory.

Following instructions on the work request, the film may go to

any of four motion picture processing machines or to the still photography laboratory where a Versamat RT-12 processes cut film. The RT-12 accepts cut film from 4 by 5 through 11 by 14 inch sizes, including 70mm, 100 foot lengths and nine-inch-wide aerial film.

The four motion picture processors are: a black and white 70mm Hi-Speed Processor, a combination 16mm and 35mm black and white negative machine, a 16mm black and white reversal type processor and the combination 16 35 70mm color processor.

Orders for work prints and masters coming from such areas as the Stock Film Library, editing section and the Public Affairs Office, are funneled through Production Control to the Library Section. Here are stored all optical masters of motion picture film developed for MSC. Only a limited number of technicians handle these originals and no scene is ever cut except at camera stop and camera start. This is protection against destroying historically valuable footage.

Printing is done on Kodak Duplicating Film, Type 7386, using a (Bell and Howell) 16mm, Type C color additive printer. Correct

MSC's 70mm (Bell & Howell) Type C continuous color additive printer shown with its two heads. One is for Type 2 perforations; the other for Type 1. MSC saved cost of two complete printers by purchasing two heads for this one machine.

color balance is achieved with a punched color timer tape fed into the printer. From the printer the exposed stock goes to processing and then to break-down tables to be cut, canned and boxed for distribution by Production Control.

The average person watching his television set after GT-4 was not aware that he was seeing an adjusted version of Ed White's walk in space, says Holland. The original was stretch printed four to one on MSC's Acme Optical Printer so that it could be pro-

jected at a normal speed of frames. The film was exposed (Kodak SO 217) during the flight at six frames per second using a 16mm electrically-driven camera.

### Custom-Built 70mm Printer

An interesting piece of equipment at the Technical Laboratory is its 70mm (Bell and Howell) Type C, continuous color additive printer with two film heads. MSC designed, built and delivered it. It became the first user of the equipment.

"MSC uses Type 2 perforations on its 70mm film; two other government branches use exposed film to us with Type 1 perforations. Instead of buying two expensive printers, we bought two heads and interchanged them as required. All exposure masters on GT-3, 4 and 5 were on Type 2 film."

### 60 Tanks That Feed Chemicals

To supply chemicals for development takes 60 stainless steel tanks ranging from 15 to 20 gallon capacities. Flow is controlled simply by placing the camera room on the second floor and the Quality Control Section; raw forces the liquids from the tanks through color-coded rigid tubing to each motion picture and still processor on ground floor. Shut-off valves on machines and sinks let operators adjust the flow to their requirements.

Additional stainless steel tanks are being installed to feed the 16mm color motion picture processor built for MSC by R. Engineering Company, designed to operate under Kodak's — or be standard — 100 degree Celsius of processing. The new processor can run 80 to 100 feet of 16mm color film per minute and use ECO-2 and ME-4 chemicals.

### Keeping Up With Space Footage

As with the operation of photographic equipment a MSC technician will practice on a processor until they become efficient. At that time the switch to the advanced 100°C method. But this is only a portion of the overall plan prepared for the Technical Laboratory to keep them abreast of America's growing space program. Specialized technicians and their modern techniques and equipment will be used in this effort — one day in the not too distant future — a package of motion picture film and still photographs will be delivered marked, *Moon Mission*.

## But first we make sure there's an audience for your films.

This is a Modern Audience Certification report. It tells you who saw your films, how many saw them, and where and when they saw them. That's so you know what you're paying for. Because you pay us only on the basis of the audiences who actually see your films.

But first there has to be an audience.

To make sure there always is, we mail over 3,000,000 promotion pieces a year to 200,000 community groups and 60,000 schools and colleges... operate 40 resort circuits... six skyport cinemas... and employ specialists who regularly call on TV stations and theatres throughout the country.

To get your films to these audiences fast and effi-

ciently, we maintain 32 regional film libraries which book your films, inspect and ship your prints and gather information about each showing.

This information is put through a computer and issued to you each month in the form of our Audience Certification reports. And at the end of each year, we summarize the reports for you.

That's what happens when you give your films to the nation's Number One film merchandiser... with over 30 years of successful and creative film merchandising experience. Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N.Y. 10036.

## *funny, you don't look like a salesman*

Maybe not. But it sure sells like one. Gets in while the boys with their catalogues are still sitting in the lobby. Why? Because everyone likes a show. The *NEW TECHNICOLOR SUPER 8 INSTANT MOVIE PROJECTOR* is the ideal way to introduce new products to your prospects — in color — in live motion. Puts on the best sales training meetings you've ever seen.

Your salesmen will love it and *use it*. Weighs only 8 pounds, **Magi-Cartridge**<sup>®</sup> completely eliminates **threading and rewinding**. Just snap in the cartridge and go. New high intensity lamp gives bright picture in any room.

For in-store selling, we've got a rear projection model — gives a sales pitch you simply won't get otherwise. Easily built into displays.

*NEED A FILM? WE CAN ARRANGE FOR THAT TOO*

This funny looking salesman could be just the boost your marketing program needs. Why not write for all the dope today!

Volume 27

# SUPERVISOR TRAINING ON HUMAN RELATIONS

Every Company's Chief Executive knows the importance of having all managers and supervisors develop a deep understanding of human behavior... and how to successfully achieve better human relations with others... how to develop an esprit d'corps, which will have everyone trying harder... to achieve more.

### Why so many management failures?

One of the country's largest institutions in its field, after researching the problem, discovered that of those who fail as managers... 2% do so because they lack technical knowledge... while 98% fail because they lack "people knowledge" and how to work with others.

### How to gain "people knowledge"

"SUPERVISOR TRAINING ON HUMAN RELATIONS" is a complete 16 hour course, including filmstrips, manual and supplementary material, which dramatically demonstrates how to successfully handle such supervisory responsibilities as:

- Promoting Cooperation
- Interpreting company policies
- The Supervisor as a representative of management
- Maintain discipline... and many other equally important supervisory responsibilities

### How to "judge" the program before you buy

Don't take our word for it. Our "preview" offer permits you to "see and judge" the program for yourself. A small handling charge, credited to the purchase price, allows you a 5 day examination period of your choice.

SMPTE Observes 50th Birthday at Los Angeles Meeting Oct. 2-7

The 50th Anniversary year of the Society of Motion Picture and Television Engineers will be highlighted in October by that organization's 100th Semiannual Technical Conference and Equipment Exhibit.

This milestone meeting is set for the Ambassador Hotel in Los Angeles, October 2-7. The West Coast city has been the site of 21 previous SMPTE conferences, the last of which was held in April, 1965.

Topics for this fall Conference program have been announced by program chairman LeRoy M. Dearing, L. M. Dearing Associates, Studio City, California. According to Dearing, papers will be presented on Education, History, Laboratory Practices, Photographic and Allied Sciences, Studio Practices, Television, Theater Presentation and Projection, Instrumentation and High-Speed Photography, and Aerospace Photography.

In addition to these papers, the conference will feature an equipment exhibit, arranged by chairman Warren Strang of Hollywood Film Company, with more than 80 booths displaying a wide range of equipment relevant to the interests of engineering and production personnel.

### Wilding, Inc. Sales and Earnings Show Sharp Increase at Mid-Year

Sharply increased sales in the second quarter of 1966 (\$3,207,732) have been confirmed by Robert C. Ausbeck, president of Wilding, Inc. Cumulative sales and earnings for the Chicago-based communications firm for the first six months of the year also showed a decisive increase over last year.

The firm's \$6,477,541 in sales for the first half of 1966 resulted in net earnings per share of 50¢, compared to a loss of 93¢ in the same period last year. Wilding's chief executive officer also announced three areas in which the company will concentrate efforts, over and above its normal production business.

The first of these is the expansion of a color laboratory recently reorganized as a separate division: Mid-America Color Labs.

Expansion has more than doubled the lab's previous capacity.

With sales of the Wilding TV Division up 62% over last year, the firm will continue to concentrate on its future expansion. Earlier in the year, TV sales and production offices were moved to a more convenient near northside location in Chicago to better serve agency clients.

A third area of expansion and improvement will help meet the need to expand and improve educational facilities and materials. Wilding is presently surveying all facets of audio-visual techniques and methods used by educators.

### Int'l Film & TV Festival Theme: "Tomorrow's Techniques Today"

☆ "Tomorrow's Techniques Today" is the theme of the 6th International Film & TV Festival of New York, announced for October 13-14 at the Americana Hotel in Manhattan. According to Festival Director Herbert Rosen, "this year's program will digress from the usual format of reviewing techniques developed during the past year and will turn to new potentials with an eye toward future production trends.

"Future trends in graphic de-

sign, photography, music and techniques will be discussed where possible, demonstrated existing material that points the way," he says. "We plan to have presentations made jointly by production specialists, explaining technical and aesthetic aspects so that users may study these new to-

One look into the future will be provided by the Bell System's "Computer Technique for the Production of Animated Films." "Horizons in Motion Picture Techniques" is the title for another session covering new methods in visual communication.

On the reviewing side of this coordinated program, the "most outstanding television commercials produced in England, France, Italy, Germany, Japan and Australia will be presented. Fifteen 20-minute reels will include each country's best video commercials.

For further details and the complete Festival program write: Industrial Exhibitions, Inc., 17E. 45th Street, New York, N.Y. 10017. Phone: 212 OX 7-497.

# NILES AND THE RADIO COMMERCIAL

**ORIGINAL MUSIC** that swings and sells is the forte of Sid Siegel, Niles' well-known musical director. Here, he puts finishing touches on jingle for Kraft Foods. Niles also has one of country's most extensive music libraries for use when original jingle isn't desired.

**MIXED WITH VOICE** With wide range of sound facilities on the spot, studio technicians can record voice and mix with musical score to provide tape ready for the air. Recent examples include spots for Ozark Airlines.

**TALENT RESOURCES TOO** - Niles' wide-reaching talent resources provide announcers, musicians, and vocal artists to meet any need. And maestro Sid Siegel is on hand to direct recording of, as well as compose, original music.

# A SALUTE TO THE SMPTE

TRANSACTIONS  
OF THE  
SOCIETY OF  
MOTION PICTURE  
ENGINEERS

50  
YEARS

MEMBER OF ASSOCIATED PRESS  
IN STEEL BINDER  
SINCE 1963

1916 - 1966

Today, in the 50th anniversary year of the Society of Motion Picture and Television Engineers, the purposes and objectives of the Society remain the same as originally set forth in 1916: "The advancement in the theory and practice of motion picture engineering and the allied arts and sciences, the standardization of the mechanisms and practices employed therein, and the maintenance of high professional standing among its members." These objectives have been prominent in the advancement of the motion picture industry for half a century and have led directly to standardization in motion pictures throughout the world. To ship a print from Hollywood to Hong Kong or New York to Nagasaki for projection in standard projectors is a common occurrence today. But it was the work of the SMPTE in standardization and related activities that made it possible. It is for these reasons we salute the SMPTE.

# Guidelines for a "sound" investment.

*Sync sound filming can be a rough, tough day's work and it requires a camera that can stand up to the "grind." Here are some guidelines to help choose the one right location sound camera for your work.*

**RUGGED RELIABILITY** — Location sound filming takes a rugged, reliable camera. The Arriflex 16BL is that kind of camera. At its heart, it has the same Arri mirror-shutter registration movement and the same heavy-duty construction which has won for Arriflex 16S and 16M cameras their worldwide reputation for quality and reliability. The new Arriflex 16BL is therefore a proven performer right from the start.

**TRUE PIN REGISTRATION** — For any motion picture camera, the moment-of-truth is the instant a frame of film is exposed. Since there are 40 such "moments" in every foot of 16mm sound film, only a true pin-registration film movement can do the job. The Arriflex 16BL has such a movement. It is the same cam-driven pin-registration movement used in the Arri 16S and 16M cameras. A movement so precise and durable that many of these cameras have turned out more than a million feet of original theatre-quality film—and are still going strong in production after production.

**SINGLE LENS REFLEX** — It's a fact, that today's best reflex finder design is based on the famous Arri mirror-shutter principle and, while often imitated, it has never been surpassed. The Arriflex 16BL finder uses this proven reflex system. It is unsurpassed for clarity and brightness under all practical filming conditions. The 16BL viewfinder requires no optical relay or image compensator; it provides the ideal condition, in which, at the moment of exposure, there is nothing between lens and film.

**COMPLETE SOUND VERSATILITY** — For the active professional with all kinds of filming assignments, not one, but two sound systems are often needed. The new Arriflex 16BL provides complete sound capability—single system sound, double system sound, either, or both. The 16BL is convertible anywhere, anytime. The single system sound head module may be quickly and easily installed, or removed, to suit the job. Shoot either, or both types of sound simultaneously. Sixty-cycle signal generator, automatic clap-stick system and cue marker for double system sound recording—quick-change conversion module for single system sound. And either system produces top quality sound with famous Arri picture quality.

Write for NEW ARRIFLEX 16BL 10 page catalog.

**QUICK-CHANGE MAGAZINE SYSTEM** — The magazine system of a location camera, must be rugged and fast without sacrificing reliability. Arriflex 16BL Quick-Change Magazines are gear-driven and have speed and take-up sprockets built in. The resulting simplified film path permits magazine change to be made in seconds. This 16BL Quick-Change Magazine system places the entire film gate safely in the camera head—where it ideally belongs. Thus, the 16BL magazine system provides the right combination of speed and reliability. Important too, Arriflex Quick-Change magazines are economical priced!

**ALL-PURPOSE CONFIGURATION** — The filmmaker's technique must never be slave to camera construction. That's why the Arriflex 16BL is built along classical lines. For tripod mounting, the Arriflex 16BL has a substantial flat base, 1 1/2" lens axis and low center of gravity. And with matching A Body Brace, the 16BL is well balanced, comfortable handling, fully mobile. Verité or traditional—the Arriflex 16BL lets you choose the filming technique that is best for the job at hand.

## PROFESSIONAL FEATURES THROUGHOUT

The Arriflex 16BL has every essential professional feature: Weight of basic outfit, 18 lbs.; Residual noise level, 31 db; Fully professional tachometer, and footage counter; Eyepiece adjustable on two axes and with automatic closure mechanism; Interchangeable motors; Single system/double system sound conversion; and options that include dissolving shutter, and built-in, behind-the-lens exposure meter. The Arriflex 16BL is the one right camera for every professional location assignment.

## IMPORTANT NEWS FROM CFI TO ALL FILMSTRIP PRODUCERS:

Now you can shoot your 35mm 2 X 2 color slide originals using 35mm Ektachrome Commercial and obtain Filmstrip Release Prints of new and better quality.

Kodachrome II, Kodachrome X, Ektachrome X, and other presently available color Amateur Reversal 35mm Films in cartridge loads are intended to and do produce excellent 2 x 2 color slides for projection — *Not for Reproduction*. Filmstrips made from such 2 x 2 slides by any of the current techniques regrettably show a tendency to be high in contrast and low in color fidelity.

Since most of our customers furnish us with 2 x 2 color slide originals as the basic material for filmstrips, we began to wonder why the same hi-fi shooting film that has proved so eminently successful for 16mm color motion pictures couldn't be applied to filmstrips. For, as you probably know, non-theatrical motion picture producers use 16mm *Ektachrome Commercial* as camera film and make release prints on EK Color Positive from a color internegative.

Would Kodak supply Ektachrome Commercial in 35mm size? The answer, we found, was "Yes," provided that we ordered an entire production run, and provided that we took on the job of loading the bulk film into 35mm cartridges. Accordingly, we placed a special order and now have the film in stock. (Kodak has advised us that future orders will be supplied in factory-loaded cartridges.)

In addition to loaded cartridges, we can also supply 100-foot rolls for those who prefer to load their own — especially those who use 35mm cameras that accept permanent cassettes like Contax, Nikon and Leica. The 36 exposure cartridge, including processing and mounting, is available from us at a net price of \$4.75. The 100-foot roll is priced at \$90.00, including processing and mounting.

Here is the procedure:

EXPOSURE DATA: A.S.A. Daylight — (use #85 filter) 16  
Tungsten — (no filter) 25  
3200 K

1. Shoot 35mm Ektachrome Commercial supplied by CFI.
2. Send exposed ECO film cartridge to CFI for processing and mounting.
3. CFI will return the processed and mounted slides to you.
4. You assemble the material for the Filmstrip (you may include ordinary Kodachrome and Ektachrome 2 x 2 slides, larger size transparencies, art work, opaque color prints, titles, overlays, etc.) and send it all to CFI with instructions for making your filmstrip negative.
5. We make a color-corrected and balanced internegative from which we make a sample print on EK Color Positive. This print is sent to you for your inspection.
6. Upon your approval, we make release prints on our unique high-definition non-scratching printer, and we develop these prints in our regular 35mm motion picture color processing machines. (The high volume of color motion picture processing going on at CFI necessitates and justifies all of the chemical, sensitometric and color control that insures you uniformly excellent filmstrip release prints.)

If you would like to see a comparison of the results of the new and old techniques, write for sample filmstrip to examine with your projector.

IF YOU WANT IMPROVED PICTURE QUALITY IN FILMSTRIPS, THIS IS THE WAY TO GET IT! For further information or purchase of 35mm Ektachrome Commercial film, contact Lou Livingston in our Filmstrip Department. Phone him at (213) HO 2-0881.

## Camera Eye THE EDITORIAL VIEWPOINT

SIGHT & SOUND SERVE ALL MEDIA

FILM IS A VALUABLE TOOL for visual facts, figures, markets and other pictorial data relating to other media: newspapers, magazines, radio, television and billboards. Media promotion people are making increasing use of sight/sound presentations to convey their stories to prospective buyers of space and time in agencies and advertising offices.

Noteworthy among these sponsors in recent months is THE DETROIT NEWS, which is using a motion picture (produced by The Handy Organization) that relies entirely on animated graphics to present a mass of statistical facts to its sophisticated audiences. *The Name of the Game is Green* handles this assignment in highly-palatable form within a brief 15 minutes of showing time.

Objective of the NEWS' film is to present in pictorial form the statistical findings of the "Second Biennial Survey of the Metropolitan Detroit Newspaper Audience" conducted by the Detroit paper by Market Opinion Research Co.

The visual presentation extracts the pertinent facts from the survey — points out that there are more than four million people in the Detroit area, more than a million householders in the

Animated graphics heighten interest in data showing how Detroit News covers market

county Detroit metropolitan area served by THE NEWS. Further, it shows that Detroit is second among the nation's top five markets in newspaper sales per family and that these sales total \$1 billion a year. The film concludes that the most effective medium for reaching these consumers is the NEWS, which has the circulation figures and home readership data to prove it.

*The Name of the Game is Green* was first shown to business, industrial and advertising agency executives at luncheon meetings in Detroit. Similar presentations followed in New York, Philadelphia and Chicago. Audience reaction, obtained through the use of evaluation cards at these showings, indicated enthusiastic reception of both the message and the method of presentation.

*The film deals with the role of the Knights of Columbus in our modern world and shows how the Knights help meet the challenges of our complex society. The film, narrated by Frank Blair, is climaxed by an address of His Holiness Pope Paul*

If you wish to see a print, please call or write to:

## THE EDITORIAL VIEWPOINT

(CONTINUED FROM THE PRECEDING PAGE 10)

### Jurors Waiting for Court Assignment Are Enjoying Free Sponsored Film Showings

Movies are now being shown to waiting jurors in two jury assembly rooms under a new program initiated by Modern Talking Picture Service.

One of Modern's clients alerted the company to the new opportunity. William H. Kendrick, Director of the Investors Information Program of the New York Stock Exchange, received a request from an official of the Supreme Court of the State of New York. The official wanted to use the Stock Exchange films in the court's jury assembly room in Brooklyn. Mr. Kendrick relayed the request to Modern, as his distributor, and asked whether this wasn't a chance to meet a real need with a wide selection of films.

Modern's New York City film library manager took over and set up a continuing program of films. The assembly room was already equipped with a 10-foot screen and a projector. Sound is channeled through the public address system.

Next stop was the Superior Court of Los Angeles, where the service was carried a step further. A special rear-screen projection unit was provided so that films can be shown without the room lights being turned off. About six films a day are shown there.

If this initial activity develops into a national service, Modern's "Jury Room Cinema"

Supreme Court jurors are seeing free films in the court's assembly room in New York.

can provide a welcome interlude for thousands of jurors waiting to be called for service in courtrooms across the country.

In practice, as soon as the need for jurors arises, the showing of the film is interrupted and the jurors are assigned to trials. In this way, the needs of the court are served while the jurors who are unassigned to trials can spend their time pleasantly watching a film.

William A. Goodwin, Chief, Jury Division, Superior Court of Los Angeles, has described the jury film showings as causing "many favorable comments and expressions of enjoyment from these taxpayer-jurors who benefit from the showings during the waiting period between courtroom assignments. This is especially satisfying since they are provided at no cost to the court or the taxpayer."

### Seventh International Industrial Film Festival at Venice Opens Full Calendar of Events

The Fall meeting calendar builds up a fast tempo as summer wanes. Headlining the events in September is the 7th International Industrial Film Festival, the world's best showcase of such films, opening on the 12th in Venice, Italy on September 12 and continuing through September 16. This event has official recognition and participation by a confederation of industrial companies in Europe and more than 20 countries, including the U.S., will participate. U.S. entries were submitted by the National Association of Manufacturers through CI.

**Y**EARS OF CLOSE ASSOCIATION in the Industrial Audio Visual Association have shown that the role of the audio-visual "expert" differs widely by company and by industry. In one company his activity may be that of a one-man all-inclusive operation, while in another he may be the manager of a large well-staffed department blessed with both money and time.

Size of company seems to have little bearing on the function, but rather the attitude toward it. It all adds up to the sentiments expressed in a jingle with a great tune, "Happiness is different things to different people . . . ." The audio-visual function in today's industry means different things to different managements.

From time to time, it is valuable to re-define the goals of this diverse and dynamic activity called "audio-visibility" and distill the most important part of it . . . that portion called "communications." It is essential to make this element stand out amid all the welter of techniques and gadgets. Once an audio-visualizer learns to communicate to his company he begins to be of value.

To assist the indecisive audio-visual expert in the exercise of communicating his role, we pose an almost silly question to him . . . "Do you know your company?"

If the a-v expert doesn't know or won't know his company, even though he is a skilled practitioner and knowledgeable in all the latest techniques, he cannot contribute to the full potential of his important profession. In know-

### Do You KNOW YOUR COMPANY?

by William H. Buch, Manager of Exhibits and Visual Promotions, Lederle Laboratories

ing one's company and what it stands for, there is always the danger of becoming a conformist, of becoming lacquered over by years of doing things the way they have always been done, and not seeking to change when change is due. But . . . nevertheless . . . "Do you know your company?"

Let us begin with an elementary question about your company. *Do you know what it makes?* Oddly enough, this is not always answered correctly by many aspirants to the title of audio-visual expert. In the quiet of your own thoughts, see if you can identify the things your company makes. In these days of dynamic acquisitions, research and new products, new services offered over old . . . it is highly possible you are not up-to-date.

Those of us in the pharmaceutical business are blessed with a larger than normal task. Some of us have more than 400 products to sell . . . many with two and three dosage forms and package sizes . . . and many of them which most of us can neither spell nor pronounce.

In addition to knowing what your company

makes, *do you know how they are made?* It isn't required that you be an engineer, chemist or trained technician, but basic knowledge of how your company's products are made can make you a more valuable person to management.

For the sake of illustration, in our business it is important that we know our major production methods and procedures, even if only a nodding acquaintanceship. In producing the "simple" flu shot, for example, (more properly called "influenza virus vaccine") you should know that the formula is strictly controlled by government agencies, that it is changed yearly by the addition, subtraction or dilution of various strains of influenza virus declared as important to epidemic control.

One should also know that it takes sixty to ninety days of painstaking work to produce a single "batch" of vaccine, grown in the fertile hen's egg, incubated, pumped and subject to continual testing. Reliable companies depend on rigorous self-imposed controls by their own quality control section before they ever send it off to Washington for re-testing, certification, and release. Also, you should know that its life is only eight to ten months after packing; that it is subject to tamperings of all sorts, including temperature variations; and that it may be returned for credit if not used.

A company's communicator need not know all the intricacies involved in the above, but he should certainly be sobered by the facts. (CONTINUED ON THE FOLLOWING PAGE)

(CONTINUED FROM THE PRECEDING PAGE 14) any great scheme he has to develop a big program built around the "flu shot." In short, he should know how his company makes its products.

A practical aspect of knowing how your company makes its products is that of understanding some of your most important plant operations. Most production supervisors, product development engineers, and people responsible for getting things made in almost every kind of business are reasonable people. In most instances, they will listen, for example, to the plans of an audio-visual "pro" for shooting production sequences, with a sympathetic ear.

The thoughtful and alert visual man will make it his business to know a great deal about *their* problems before making his desires known. If our hero knows that a certain production room or space is, by the nature of the work, likely to be untidy most of the time, he won't spring his plans for picture-making in the midst of a large production "push." This would involve not only getting in the way physically, and often upsetting production schedules, but, in addition, could easily affect the attitude of the plant operations people to the point where they refer to the audio-visual man as "that guy from sales," or "that dolt from the public relations department."

In the words of the Music Man, Professor Harold Hill, an audio-visual "pro" has to "know the territory," which more precisely

## THE PROFESSIONAL VIEWPOINT

means that *he should know his company's customers.*

Again, it would be valuable if our man had had the experience of actually selling his company's goods but whether he has or not, he should know who the customers are.

Many times we find ourselves with a "perfect" scheme, designed to sell or promote goods, only to find when the scheme is carefully analyzed the message is not directed toward the proper audience. Naturally, if you are fortunate enough to have the assignment to create a better climate in which others may sell goods, then you are in the fortunate "image building" field, and a lot of things can be done in that area without strict accountability. But down at the hammer and nails level, your knowledge of who the customer is makes you a reliable member of the team.

A little more difficult, but just as necessary to the audio-visual pro, is knowledge of *how his company sells its products.* What is its marketing policy? Distribution system? Can you say whether it has a hard or soft sell policy? There are many little tip-offs as to the character of your company . . . such as personnel policies, industrial relations programs, union relationships, even safety programs which can help you analyze your company's personality.

Obviously, we all work for upstanding companies or we would resign, but there is a wide

difference in the way soap and household detergents are sold from the way earth-movers, equipment and telephones are sold. Many times you can hitch-hike and adapt methods of selling goods from a widely divergent field of business but the point to remember is do you know how your company sells its product?

Even more difficult in the education of an audio-visual "pro" is to *know what part of his company's line is profitable.* He need not know in privy to all the inner profit pictures of his company but he should be aware of the things of relative importance of his company's work.

For example, we make Bivalent Botulism Antitoxin, Types A and B. This product is costly to make and rarely needed, resulting in a high price to the patient. But we market and stock it all over the country against the time some housewife cans her own rutabaga and next spring her whole family is down with a dread infection from consuming this delectable morsel. If they get the antitoxin in time, they may live. But don't build a big sales pitch picture on Botulism Antitoxin products because there aren't any. Better for us to get pictures of the Air Force Jet that flies in the stricken family and let the wire service and news media sing your praises, and let that it won't sell any more antitoxin, we'll run your company in the red every time we package a vial of it.

If you aren't familiar with the relative (CONCLUDED ON THE FOLLOWING PAGE 15)

# Education Needs Programs, Ideas to Keep With Flood of New Teaching Devices

Discuss "Educational Realities" at AMA Conference

THE EVIDENCE of mass proliferation of new teaching devices exhibited at the American Management Association's Second International Conference & Symposium on Educational Realities at the Americana Hotel in New York, August 9-12, Harold Howe, S. Commissioner of Education, in a key address, warned that we do not have machines that can do what we have nothing to say." He urged the equipment manufacturers to venture into making pieces of hardware unless he is prepared to go all the way in programming. "Otherwise, he has created an empty vessel, not a glorified page-turner." Howe suggested that the sophisticated buyer of highly substituted hardware and materials is in great need of guidance, possibly even by such a regular arrangement as patterned with Food & Drug Administration, although he was not necessarily prepared to endorse this idea. But some working plans to establish national standards of learning and teaching equipment was definitely desirable.

**Technology With Ideas**  
Continuing on this same theme, Gardner, Secretary of Education and Welfare, in an interview screened at the conference, warned that "A great deal of money could be spent on equipment without adequate consideration of educational needs. And that money will go down the drain. The question is what's really going to pay for the money which goes to the best technology with the least."

Downstairs from the ballroom where Mr. Gardner and Mr. Palmer were speaking, 60 exhibitors displayed the latest, most sophisticated, and most sophisticated electronic audio-visual equipment, projection and retrieval systems were demonstrating that the hardware seems to be outpacing software in the race to satisfy the needs of the almost billion-dollar-a-year educational audio-visual market, the hardware is astonishing.

For instance, RCA's Select-A-Lesson student booth contains a

Commissioner of Education Howe, noting the increasing number of teaching devices, suggested that school buyers need guidance . . .

typewriter, a TV screen and a dial. The student simply sits here—in a classroom, library, or even a distant dormitory—and dials for the information he needs.

### Needs Are Local, Specialized

But while the universal dial systems had their advocates at the Conference, Charles Palmer, Executive Producer, Parthenon Pictures, Hollywood, pointed out that "one thing we can not prepare for is the science-fictioner's happy dream of the gargantuan National Information Retrieval System, in which all human knowledge is stored, to be disgorged on dialed requests from anywhere in the country for instant read-out on one's home, office or dormitory Videophone.

"Despite the obvious absurdities, akin to the dreams of the freshman who has just read 'Brave New World', some of the current forecasts being made quite seriously, seem, when we think things through, almost equally impractical. It seems to me obvious and inevitable that for the foreseeable future, Information Retrieval Systems will be (a) *localized*—much in the manner of CATV Systems—and (b) *specialized*, as to the subjects stored in them.

### Take a Walk to the Library

"The limitation on the geographical service area," Mr. Palmer continued, "arises mainly from the costs of the telephone circuits, since there are very few students who could dial a central storage system from an outlying location, and pick up the tab for a ten-min-

ute broad-band video report on, say, the social acceptability of hydrogen sulfide. Then there's the limitation on the number of incoming telephone trunk lines which the System itself can install and pay for. Moreover, even on the Government's own nationwide leased-line, long-distance telephone network (the Federal Telecommunications System) callers must often wait a half-hour or more for one of the trunks to clear . . . and in that length of time, our student could just as well take an old-fashioned walk across campus to the library to get his wanted information.

"It seems to me," Mr. Palmer said, "that as we get farther along in the actual usage of Information Retrieval Systems, we will realize that there will be two broad

Producer Charles Palmer forecast greater use of economical, more accessible 8mm films in schools.

classifications of audio-visual reference material, each to be 'retrieved' in its own appropriate way. The short, direct answer to the specific query, the concentrated shot of supplemental information, can come naturally out of the

RCA demonstrated its "Select-A-Lesson equipment," where students simply dial for reference data.

formal Information Retrieval Systems.

### Film To Be More Accessible

"But the longer pieces of material—the filmed course surveys, the full-treatment documentaries, the historical feature movies, the filmed great plays, the growing file of recent-history TV news coverages, even the travel films to support language studies—these, in today's conventional running lengths of 20 to 30 minutes, an hour and sometimes two hours, far too expensive for IR to store and too costly in circuit time for telephone readout, will become more and more immediately accessible to the student and researcher through the upcoming economies of 8 mm optical-track film prints . . . the word 'immediately' used in the sense of time it takes to walk or drive to the library or film depository where the film can be viewed in special rooms, or—and this is of real significance—borrowed for viewing at home, or in the office, or dormitory.

### Predicts New 8mm Equipment

"The development which will make this a practical practice is only about a year away, in the form of revolutionary new carry-around 8mm automatic projectors which will accept the film in pre-loaded snap-in cartridges; will show the pictures on built-in screens like television sets without darkening the room, and so low in price, both as to projector and the cartridge prints, as to make screening of films almost as simple and cheap as reading borrowed books.

"I wish I could tell you more about this, but the announcements will be public in a few months. One basic assurance: for the purposes of the current discussion, this new equipment will not fight for position with any Information Retrieval System.

"Rather, conventional film forms will work in harness with the oncoming Information Retrieval Systems, until audio-visual learning materials at long last begin to deliver the broad and educational usefulness which we have so long have promised."

### 1,200 Attended

Mr. Palmer was one of the speakers many of whom presented a wide variety of equipment at their presentations at the conference, which was attended by over 1,200 educators and businessmen. For more details of other Conference reports will be published in subsequent fall issues.

**Expand Mid-America Color Labs;  
 Separate Division of Wilding, Inc.**

The establishment of a separate film laboratory division of Wilding, Inc., Mid-America Color Labs, has been announced by Robert C. Ausbeck, president of that national communications company. Lab facilities at 1345 Argyle Street on Chicago's north side were more than doubled in July.

Harold Kinzle, vice-president in charge of production for Wilding, has been named manager of the

Harold Kinzle: directs lab division of Wilding, Inc.

new division. In making the announcement, Mr. Ausbeck noted that Wilding has enlarged these facilities in order to solicit additional service business as well as to supply faster service for all of the company's own color print work and related laboratory services.

**Nation's TV Stations Receive  
 Films for "Sight-Saving Month"**

A mass educational campaign, aimed to show millions of Americans how to prevent blindness and to save sight, has been released by the National Society for the Prevention of Blindness to help promote Sight-Saving Month in September.

The Society's public service kit, sent to all local and network TV stations, includes three color spots: one 60-second subject and two 30-second spots, along with two color slides with live copy. The films cover Amblyopia in *The Case of the Lazy Eye*, *The Partially Seeing* and *Cataract*.

The Society, founded in 1908, is the oldest voluntary health agency nationally engaged in the prevention of blindness through a comprehensive program of community service, public and professional education and research.

# How Hughes "Active Citizenship Campaign" Brought Record Vote, Candidate Support

THE HUGHES AIRCRAFT COMPANY is an example of a large corporation that tried an experiment in public affairs, succeeded beyond expectations, and subsequently found it had the problem of finding an effective means of presenting results for dissemination to other interested organizations. This aerospace firm decided that a motion picture produced in black and color would be the best solution.

The public affairs experiment at Hughes is the "Active Citizenship Campaign," a program designed to encourage employees to take greater interest in their duties as Americans. The company began the program in 1964 during the presidential campaign, and as a result, established new records in getting workers to register, vote and contribute financially to the party and candidates of their choice.

### Register, Vote and Contribute

Ninety-seven percent of all eligible Hughes personnel were encouraged to vote, compared to a national average of around 70 percent. Ninety-eight percent of the eligible people who were registered went to the polls and cast their ballots. Nationwide, the average is a poor 61 percent. Also, over six thousand Hughes employees contributed more than \$500 to their favored party and candidates.

Word of the Hughes Aircraft success spread to other companies and the firm began to receive many inquiries about the program—in particular, how the project was managed. As a result, the company decided that it would be in its company's and nation's interest to document their "Active Citizenship Campaign" with a film for distribution to interested parties. Entitled *Who Cares*, the film traces the history of voting in the United States from the Revolution to the present, and tells how the Hughes Aircraft Company organized and implemented the campaign at its widely scattered plants and facilities.

### History of Voting in America

The film contains both live action and special graphics. The history of voting in America is

portrayed by authentic and often rare historic paintings, etchings, photographs and political cartoons. The live action was reserved chiefly for demonstrating the Hughes public affairs program. In addition, the film contains stimulating scenes of political rallies held at Hughes facilities. Among the notables in the film are former Senator Goldwater (Arizona), Senator Murphy (California), runner-up Salinger, Congressman

Actor Wendell Corey made on-scene appearance and narrated portions of the Hughes Aircraft picture.

James Roosevelt (California), Ronald Reagan and others.

*Who Cares* was directed and produced by Ken G. Brown, the company's coordinator of visual media, who enlisted the services of some of Hollywood's leading talent, including Wendell Corey.

### Shown to Congressmen, ECO

The film was premiered in Washington, D. C., early this year before members of Congress and at a special meeting of ECO, the Effective Citizens Organization. ECO's membership is made up of businessmen from all walks of life who are concerned with their employees' interest in citizenship. Through ECO, these managers obtain an appreciation and knowledge of our political and governmental processes, and they are advised on ways of promoting better participation in elections and government by their personnel.

In addition to producing the film *Who Cares*, Hughes has published a manual and other background material which thoroughly documents the "Active Citizenship Program." Hughes is offering the mo-

Hughes' "Active Citizenship Campaign" proved to be one of the most successful public affairs projects initiated by an industry. During past program, several political rallies held in company facilities drew throngs of employees and invited guests. Crowds numbered into the thousands.

tion picture and other publications to interested parties at no cost.

### Four Goals of This Campaign

The success of the company's program can be credited to well-defined objectives and efficient organization. The project's goals were boiled down to four:

1. Encourage and assist in registering employees to vote.
2. Stimulate interest and provide the means for employees to become better informed on the candidates and issues in Federal, state and local elections.
3. Promote and facilitate personal contribution to the campaigns of employee's favored candidates and parties.
4. Urge all qualified employees to vote and encourage their relations and friends to do the same.

The Hughes campaign was conducted company-wide. Over 24,000 employees participated at nine plants at scattered locations in California and Arizona, and at various district and field offices throughout the United States.

Hughes' management foresaw

that usual organization channels of communications within the company might be too inflexible for this kind of program — and for two very good reasons. One — extensive, daily coordination would be required with the company's relatively autonomous organizations located at the different plant sites. Two — direct communications and fast reaction time would be essential to the effective management of planned activities of the "Citizenship" campaign.

### Special Task Group Directed

These programs were solved at Hughes by creating a special organization to bypass the usual echelons of command. This group consisted of a non-partisan segment to administer the registration and contribution programs, and a partisan segment to coordinate and arrange the political rallies and political information programs.

The non-partisan segment was made up of: a corporate Active Citizenship Program Administrator to provide broad overall direction (CONTINUED ON NEXT PAGE)

Camera crew prepares closeup for "office" scene in Hughes' public affairs film "Who Cares." Live-action sequences such as this were successfully blended with special effects and graphics, designed by Mario Casetta.

SALES TRAINING FILMS  
by PARTHENON

**"TWO CHEERS FOR CHARLIE"**

(Mutual and United of Omaha)  
Your salesmen usually see your Training Film only once and retain little. But a Sales Film which he uses on his prospects he will see many times . . . and every time absorb more of the "right way" until he's got it in his bones. This double-barrel Sales Training Format is tough to do and it costs, but it pays. See *Two Cheers* . . . also see.

**"GOOD OLD SAM"**

(Merrill Lynch, Pierce et al)  
The same sideways Training approach as *Two Cheers* above . . . here used to inculcate a deep concept of fundamental investment theory in the brokers' Registered Representatives. But, a *must*—the Training must come as a bonus, the film must first be a first-rate working Sales Film.

For loan prints, write or phone Ted Palmer at:

**PARTHENON PICTURES**

2625 Temple St., Los Angeles 90026 • (Area 213) 385-3911

**"LOVE THY CUSTOMER"**

(Ford Motor Company)

Instead of scolding the service writers and mechanics for the tenth time, this film goes upside down and sympathizes with their hard lot . . . and then shows them the better selling methods, via the self-interest route.

**OTHER PARTHENON SALES TRAINING SUBJECTS**

**"THE HARDESTY CASE"**

To motivate car salesmen to sell the full line including trucks (Ford).

**"HEAVY GOING"**

To persuade the "entertainer" type salesman (heavy trucks) to build solid "fact-and-figure" proposals for his big-ticket jobs (Ford).

**"THE FILE ON HENRY ROYALL"**

To persuade the "inside man" (branch bank managers) who never expected to hit the street that in today's world he *must* sell . . . that he *can* sell . . . and, in a detailed Case, here's *how* (Bank of America).

**"LOVE THAT CAR"**

A 10-minute theatrical type color comedy on Car Care, to remind Service Station employees, in a way they'll remember, of the services they can sell (American Oil Co.).

**"THE OPINION MAKERS"**

To show how to make one's opinions effective, without taking time away from work (Am. Medical P.A.C.).

All films: 25-30 minutes.

Preview prints are available to companies intending to sponsor similar films for their own situations. Sorry, no rentals.

**Picture of "Active Citizenship" at Work**

(CONTINUED FROM PAGE 23)

for the entire program, and a Plant Site Administrator at each facility.

The partisan segment included: two corporate Vice Presidents to serve as chairmen of the volunteer Democratic and Republican booster organizations formed at each Hughes plant.

Also, two Political Coordinators — one for each party — was appointed at each company location. These people acted as chairmen of their parties' local, volunteer booster committees.

**Handbook for Campaign Workers**

A detailed "Plant Site Administrator's Handbook," was made available for campaign workers and provided policy guidance and ground rules for conducting the program. It should be pointed out that all employees who worked on the campaign did so simply as "extra duty."

The accomplishments of the "Active Citizenship Campaign" at the Hughes Aircraft Company speak for themselves:

A total of 6,374 employees who required registration or re-registration were registered to vote in the November 1964 election. Of these people, 3,530 were registered on company premises during break and lunch periods. In all, 97 percent of Hughes personnel were registered to vote. This was 24 percent higher than the national average.

Thirty-six political rallies were held on company premises. Total combined attendance for all rallies is estimated at 40,000 employees and guests. Over 100 candidates participated in these programs including Senators Goldwater and

During last campaign, presidential hopeful Barry Goldwater, plant visitor, talked to workers.

Murphy, Senate candidates and Fannin of Arizona, and Larry Salinger of California. Federal candidates for the U.S. House of Representatives made appearances at Hughes plants as did two gubernatorial candidates and many hopefuls for various state and municipal offices.

Democratic and Republican political committees were equally active at each plant site. These committees made political literature available to interested employees, set up lending libraries, scheduled political rallies, and an untold number of round-table and forum discussions during lunch periods. And as a prelude to this year's activities, the *Who Cares* is being shown to interested employees.

**10,500 Employees Gave Funds**

Another national record climbed up by the "Active Citizenship Campaign" was for first year contributions by employees at a company conducting such program. Over 10,500 Hughes employees made contributions through campaign or privately. Contributions were designated for political parties and ninety-nine individual candidates. Sixty-four percent of those who made political contributions.

(CONCLUDED ON PAGE 6)

"Active Citizenship Program" gave Hughes' employees opportunity to meet the candidates. Office seekers like Pierre Salinger (above) gave prepared speeches but also mingled with groups of workers.

Sales personnel at R. H. Macy's New York City store are seeing one of the "People Sell People" series of retail training films designed to increase individual sales ability. According to Herbert Mines, Administrator of Divisional Training at Macy's, some 7,500 employees will view the film. Showings are held just before store openings on Fairchild Mark IV 8mm projector (as shown), easy to set up on counter top. Film series is distributed by Modern Marketing, division of Modern Talking Picture Service.

## National Shoe Institute Unveils Fall Fashions in a Colorful Show

☆ The new "dynamic duo" — legs and shoes — are featured in a new fast-paced color slide presentation put on for the fashion press last month in New York by the National Shoe Institute.

According to Alice Regensberg, NSI's fashion director, the real message of this fall's fashion look is below the hem because of the leggy look so prevalent now in clothes. To illustrate the importance of the right shoe with the short-skirted and free-silhouetted clothes of today, the slide presentation showed a model wearing fall clothes with old-looking pointed-toe, high heel pumps, and then a model wearing new, appropriate fall footwear.

As produced and directed by Anne Koller, of Rossmore Productions, New York, the half-hour, 165-frame show featured clothes by leading coutouriers to complement the shoe collections, and also demonstrated the new "wardrobe-integrated look" that NSI is

promoting for men's and children's footwear this coming season.

## Bank of America's New Slidefilm Will Help Train 30,000 Employees

☆ The most extensive employee film training program ever produced by the Bank of America is now being shown to nearly 30,000 employees at 896 California branches. The training package of five color sound slidefilms, each 12 minutes long, also includes 20 brochures, posters and reference cards. More than 230,000 pieces of printed collateral material are being distributed by the bank.

Each of the slidefilms was designed to reiterate sound credit principles and procedures, to improve employee sales technique and to motivate Bank of America personnel to transact customer business on a more personal basis.

The sound and color filmstrips were produced by FilmFair Communications, a division of FilmFair, Studio City-based commercial production company. The subjects use art over live action.

# A TALL BUILDING NEEDS DEEP FOUNDATIONS

The foundation of a documentary film is a penetrating survey which will shape the plan of the film, and, bearing in mind the audience for which it is to be made, decide its scope.

The steel framework is the script, which will give the film its final form. As the steel is clad with the stone, so the script is given substance by intelligent direction — good photography — polished editing — faultless sound.

But ultimately the functional suitability of the building depends upon the skill of the architect. Behind every Reid Ray film is the experience of a pioneer in film production. Like a building, a Reid Ray film is an investment.

### AAA Traffic Safety Foundation Makes 22 Titles Available at Cost

★ Trustees of the AAA Foundation for Traffic Safety are making it easier for safety education film users to help save lives and reduce injuries through wider use of the sight/sound medium.

22 up-to-date traffic safety motion pictures are now to be made available at the *cost* of making the print and putting it on a reel and in a container. And shipping charges are prepaid in the U.S.A. and Canada. The Foundation has absorbed all other costs involved in each of these films.

For example, a dozen 16mm motion picture subjects, ranging in length from 13 to 14½ minutes each, are offered at only \$35 in color; at \$15 each in black & white. Titles include: *The Talking Car*, *The Safest Way*, *Your School Safety Patrol*, *Freeway Driving Is Different*, *Stay Alive*, and *Your Child and Traffic*.

Ten animated films for children's viewing (*Otto the Auto Series*) are four and one-half minutes each and offered at \$13 per title in color; only \$6 per black & white title.

A brochure describing all films is available from Burton W. Marsh, Executive Director, AAA Foundation for Traffic Safety, 1712 G Street, N. W., Washington, D.C.

### SMPTE Awards Two Scholarships to Rochester Institute Students

★ The Society of Motion Picture and Television Engineers has presented its second Scholarship Award to Lincoln Perry of Watertown, Mass., and to Robert Van Arsdell of Malvern, N.Y. Both young men are undergraduate students in the Photographic Science course at Rochester Institute of Technology. Both Perry and Van Arsdell were selected by R.I.T., administrator of SMPTE scholarship program, to share the award by virtue of their unique similarities in both past and present scholastic achievements.

Perry's interests focus on the chemical and electronic applications of photographic science as related to computer methods in photographic problems. Van Arsdell plans entering government service in photographic programs.

The Society launched the scholarship program to further encourage higher education in the photo-

graphic and television sciences, with an initial grant of \$25,000 from Saul Jeffee, president of MoviLab, Inc., New York.

### Foster Mullenax of West Virginia Wins Farm Film Foundation Prize

★ The Farm Film Foundation's annual \$500 Professional Improvement Award has been won by Foster G. Mullenax, State Extension Editor for Radio and Television at West Virginia University. His film, *Spring Comes to Virginia*, was accorded that honor at a dinner given by the Farm Film Foundation and the Foundation for American Agriculture in Athens, Georgia, on July 13.

The awards ceremony was one of the highlights of the annual meeting of the American Association of Agricultural College Educators, held at the University of Georgia during that week.

William O. Maxwell of the International Harvester Company, Chicago, was the principal speaker and assisted Edith T. Bennett, executive vice-president of the film foundation in the presentation. Mr. Mullenax of the award certificate and check for \$500. An honorable mention certificate and check for \$50 went to runner-up Richard G. Turner of Cornell University.

Judges who selected the winners were: Dr. Landis Bennett, in charge of audiovisuals in the Agricultural Extension Service, North Carolina State University; Maxwell; and James E. Gibson, former Chief of the Motion Picture Service, U. S. Department of Agriculture.

### WRITER-PRODUCER DIRECTOR AVAILABLE

**Experience:** 10 years with leading industrial film, educational film at advertising companies, plus experience writing and producing in television shows, short theatrical films, and staged revues.

**Qualifications:** A little knowledge of almost every subject — a love of pictures and words — an awareness of how people speak and act, and the ability to translate this into the languages of film, radio and television — a capability with camera recording equipment, lighting and design — a sense of humor.

**Requirements:** Permanent employment or steady free-lance work on a contract basis.

## A-A MAN WITH A MISSION

### Milton Sebring Helps People Help Themselves

MILTON W. SEBRING, manager of audio-visual services in the advertising department of Norton Company, has been living a double life for many years.

At his Worcester, Mass. office at the headquarters of the big abrasives manufacturer, he supervises such communications techniques as the writing and production of industrial motion pictures, color-slide presentations and other visual devices for teaching new techniques to Norton customers and employees, as well as promotional films for the general public.

The rest of his working time is spent as a "businessman-diplomat" for the U.S. State Department, a responsibility that has taken him for long periods of time each year to distant and often primitive parts of the world.

Communications have been Sebring's specialty going back to his days as a student at Clark University where he majored in economics, anthropology and political science.

"I was interested in economics, but I wanted to apply the other two subjects to economics," Sebring says. "I became interested in the science of communications, a way to break down the barriers between these subjects, partly for my own entertainment and partly for my own benefit."

Sebring continued working at his avocation after joining the sales department of Norton in 1936. After speaking engagements to groups ranging from the International Library Association to the Atomic Energy Commission, and work as communications consultant to Harvard University, and later, Massachusetts Institute of Technology, Sebring was called to the State Department in 1960 to aid in developing techniques for communications between differing cultures. On this job he remained "on loan" from Norton for two years.

Following this he moved to the State Department's foreign service as an adviser, at the same time joining the advisory committees of the Business Council for International Understanding and the Council for Latin America.

Both councils, made up of experts from American industries such as Norton, are private, business-financed groups working closely with the State Department for better international relations.

The Business Council for International Understanding was formed after a request by President Eisenhower that top business leaders mobilize their combined resources and talents toward meeting the economic and social problems in newly developing countries.

The Council for Latin America is the U.S. section of the Inter-American Council of Commerce and Production. Its purpose is to support democratic institutions and to help create political and social stability in which private enterprise can flourish.

"It's in our national interest, as well as the

interest of American business such as Norton's," Sebring says, "to encourage a steady and prosperous atmosphere in Latin America—one we can meet and work with."

It has been Sebring's responsibility to develop visual communication techniques—

*"Communication touches every facet of human experience," Sebring says, "and you find yourself involved . . ."*

tion pictures, slides, etc.—toward bridging cultural and language gaps in Latin America.

"Communication means a great deal more than just being able to speak the language of the particular country you are visiting," Sebring says. "It is the fabric of all society, and visual communication, in particular, is the closest we have to a universal language. Communication means making yourself understood—and that's a hard job between persons who not only speak different languages but who come from worlds which are culturally only thousands of miles, but centuries apart."

It was perhaps inevitable that Sebring's training in economics and the social sciences would rise to the surface.

"Communications touches every facet of human experience," he said, "and you gradually find yourself involved in the problem rather than just the communication aspect."

This new emphasis has brought Sebring (CONTINUED ON THE FOLLOWING PAGE)

### A-V MAN WITH A MISSION:

the tables of both United States and Latin American conferences.

"One of the questions I'm often asked is why industry, and Norton in particular, is willing to loan men to government," said Sebring.

"In order to answer, we need to recognize that in recent years both American business and the government have increased their commitments abroad. Many of these interests are in the less-developed countries and efforts to encourage their economic development and political stability have brought new patterns of relationship between government and private industry.

"This has meant the joint efforts of government and industry to develop a new breed of specialist, one who understands the needs of corporate enterprise and yet understands the political and social complexities of vastly different countries—in short, a businessman diplomat.

"For its part, the State Department has started a strong program to reorient the training of all Foreign Service officers to the needs and problems of American industry abroad," he explained.

"This collaboration between government and private industry is not the kind of news likely to make the headlines, yet it will have a profound effect on the welfare and security of everyone," said Sebring.

"To many people in the world the distinction between a democratic free-enterprise system and one owned by a totalitarian government isn't understood," he said. "Both the United States and Sino-Soviet communism are trying to influence the way these people will go.

"And our new efforts haven't gone unnoticed by the opposition, either. I remember having lunch with a Russian delegate in South America, for example, and he said, 'I know why you are here, and for every one like you we will send two.'

"I answered, 'I knew we were good, but I didn't realize we were that good!'"

In order for American business and government to build a really flourishing relationship with Latin America, Sebring feels, Americans have to meet Latin American leaders on an intellectual and cultural basis as well as on an economic level.

"Much too often, the businessman or government official has gone to Latin America expecting a quick signature on a contract, and come away without it—and with a feeling of complete frustration," Sebring said.

"We haven't understood that first of all the Latin American is inclined to consider the impact the contract would have on his social, cultural and political values, and only then its economic value. Unless we learn to appreciate the vast intellectual and cultural heritage which mean so much to the Latin American, we won't get very far."

What motivates a man, such as Sebring, to take on the responsibilities of a businessman-diplomat?

"There are probably several reasons," said Sebring, "but first, to believe in the objectives,

Children of bush tribe flock to Milt Sebring's "magic box" — the tape recorder which accompanies him on his goodwill journeys to many

and second, to be confident that you are doing something worthwhile to contribute.

"There's little glamor—it means a fantastic amount of study, long briefings, and all often around-the-clock work. It even touches my family—my 16-year old daughter Marjorie runs a complete clipping service for me, cataloging a big library on Latin America."

"Sometimes the answer to a problem lies in a remote village in the Andes, sometimes in a United Nations in Geneva, or a sophisticated vacation resort in South America.

"But it also has its rewarding moments. I've met with heads of government, or other officials at close range, to exchange a few thoughts with the late Indian Prime Minister Nehru, his daughter, the present minister, or to be trusted with a verbal message from the president of a South American country to President Kennedy—those are things you can't forget."

"Sometimes, of course, a meeting can be a little uncomfortable," he added with a laugh. "Like meeting with the chairman of a Latin American junta—under the muzzle of a machine gun!

"But in many respects I have the best of both worlds," he said.

"My work at Norton gives me a lot of satisfaction in developing visual communication."

"And my assignments to the government are as stimulating challenges in fields—economic and social development—that are so important to the world's future.

Communicating ideas on film and a full range of programmed audio-visual media

\* Water courtesy of the Atlantic Ocean

## Actually, this is the only thing between you and Chanowski (the Audio-Visual people in Holland, Europe) So, who's afraid of water?

It's almost neglectable these days, as you fly over it to Europe  
Takes you little longer than flying coast-to-coast in the  
United States, for instance.

Gives you the opportunity to call on us and see the things  
we've been doing in the Audio-Visual and Film field.

You might even talk us into thinking up some unusual  
programs or new Audio-Visual techniques for you, or your  
clients.

Costs you less, probably.

Fact is that the European business operation is rapidly  
coming more and more important to American companies.  
found proof of this working for Coca Cola, Schick, Dupont  
International, IBM and many others.

So why not try this happy combination of two great ideas:  
Europe and gain by it, business-wise.

As a NAVA member we're glad to be your host.

# the news perspective

## Fewer Italians Are Seeing USIA Films

FOR A QUARTER-MILLION Italians had a look at official U.S. sponsored documentary films last year. Queried in Rome, the United States Information Agency's film section told us that complete figures for 1965 were not yet available but that the figure of around 250,000 viewers should be about right.

In 1964, there were 3,300 showings of USIA films to 280,000 spectators; since then the total has declined.

But this is all small beer to the statistician 10 years ago when U.S. government film activity was at its height. In those days, annual totals exceeded one million viewers. Then, the winds of economy blew colder and the film budget of USIA has been one of the activities which suffered. For the U.S. film distribution network has been reduced from eight to four—in Rome, Naples, Palermo and Milan. The first three are the most active.

It is difficult to produce evidence of effectiveness when audience response is spasmodic. There are, however, 300 organizations all over Italy which cover the whole of this country's educational, cultural, and industrial interests and these are regularly served from the USIA library with some 379 documentary titles.

Most of these organizations have their own equipment but when they need it, USIA lends them projects for series of film showings,

sometimes extending over two or three months. The library receives some 20 new titles each year, though some of these may not be suitable for Italian showings. In most cases the films are dubbed in Italy and eight or nine prints of each title go into the libraries.

In subject areas, art and cultural films are best represented with 63 titles; science is a close second with 61 titles. History and geography are represented with 48 subjects; international relations are covered by 47 titles and technology is treated in 46 pictures. Films on the democratic way of life tally 35 titles. Other topics are: educational films (21); industry and trade union problems (13); sports films (12); and social assistance topics (10).

As might be expected, it is the space exploration films that at the moment are attaining the largest audiences and are in greatest demand. U. S. films are shown at as many film festivals as possible and these, according to the USIA, are mushrooming everywhere in Italy.

The major competitor in this field is the Soviet Union. The Russians have a kind of special "advantage" since they use the powerful, well-organized and widely-represented Italian Communist Party as their distribution agent. As you might imagine, these Russian films concentrate primarily on letting viewers share the wonderful paradise of the USSR, which for most Italians is a wry joke. •

## "The Paper Forest" Wins Top World Honors

Southern Pulpwood Conservation Association's Picture Wins "Tree of Gold"—World's Highest Honor for Forestry Films

CELEBRATING A YEAR of successful production, promotion and distribution for its motion picture, *The Paper Forest*, the Southern Pulpwood Conservation Association has received the Tree of Gold, the world's highest honor for a motion picture on forestry.

The international trophy, "Gran Premio Award" of the Film Festival held during the recent Sixth World Forestry Congress at Madrid, Spain, was presented on Friday evening August 5, at special ceremonies held at the Atlantic Athletic Club. Harry S. Mose-

brook of New York, president of the SPCA, received the Tree of Gold award from Edward P. Cliff, Chief of the U. S. Forest Service, who headed the American delegation at Madrid this summer.

### 90 Pictures from 40 Lands

In his presentation address Mr. Cliff observed that "this was a dramatic success for the United States because the competition at Madrid was terrific. *The Paper Forest* was among 90 films from 40 countries submitted for judging and interest ran high throughout the Congress. Every American

shared my delight and the intense pride that I felt when the SPCA film was announced the winner.

"Second honors went to Cuba, third to a film from Switzerland; and a film entered by the Soviet Union placed fourth. The next highest-placed U. S. entry was the Forest Service film, *Patterns of the Wild*, in 23rd place and winner of a medal of bronze," he reported. An 11-man all-European jury made the final selections.

### South Merited "Tree of Gold"

In accepting the award for the Association, Mr. Mosebrook said, "It is most appropriate that the Tree of Gold be permanently located in the South where the presently favorable balance of forest growth over use has been a major factor in attracting the greatest expansion of the pulp and paper industry in the nation."

According to SPCA's general manager, H. J. Malsberger of Atlanta (also a delegate to the World Forestry Congress), *The Paper Forest's* story of forest development and the significance of the pulp and paper industry of the South is in constant demand among adult groups throughout the region.

### Film's Principals Were There

Also present and honored during the Tree of Gold awards' ceremonies were John Harvey (of Bowaters Southern Paper Corp., Calhoun, Tenn.), chairman of the

public relations committee of SPCA and active throughout the film project and Frank Willard, head of Frank Willard Productions in Atlanta, who produced the gold award-winning picture.

Cuba's film was titled *Nace in Bosque* (A Forest Is Born); the Swiss entry was *For What Does a Forest Serve?*; and the USSR's fourth prize winner was *Rehabilitating Swampy Forest Land*. Fifth place went to a United Kingdom entry, *Usutu*.

### Film Was Selected by CINE

The editor of BUSINESS SCREENS, O. H. Coelln, represented the Council on International Nontheatrical Events (CINE) which handled the U. S. selections sent to Madrid. Following its first review by a CINE midwestern jury, the film was cited for the U. S. judging finals in Washington, D. C. The jury which gathered to choose the United States' official entries for the World Forestry Congress' Film Festival was headed by another CINE board member, Charles Dana Bennett, head of the Farm Film Foundation.

The Tree of Gold award is the highest yet received by any U. S. film entry at overseas film festivals in 1966; many other events are yet to be held and final CINE Awards for 1966, including the Golden Eagles, will be presented at ceremonies to be held in Washington, D. C. in November. •

U. S. Forest Service Chief Edward P. Cliff (left), head of the American delegation to the Sixth World Forestry Congress at Madrid, presents the Tree of Gold, world's highest honor for a motion picture on forestry, to Harry S. Mosebrook (next to Cliff), president of the Southern Pulpwood Conservation Association. Looking on, at ceremonies held in Atlanta on August 5, are Frank Willard, president of Frank Willard Productions, producer of the award-winning film, and (far right) John Harvey, chairman of SPCA's public relations committee who helped guide the film project.

## New York: a Good Place to Visit

Mayor Lindsay, Civic Leaders in Audience as Humble Oil Premieres a 13-Minute Color Film of "The Anytime City"

NIGHT AND DAY, winter and summer, spring and fall, New York is a festive city to visit — *Anytime*.

This premise is entertainingly sustained in Humble Oil & Refining Company's new film, *New York: The Anytime City*, premiered at the Hotel Roosevelt in New York on July 29 for Mayor John V. Lindsay and nearly 300 of the city's leaders in government, education and business. Some two years of research, scoring and production went into the color motion picture produced by John Bransby Productions, Ltd., of New York.

The 13½-minute film, written

and directed by Gene Starbeker, shows the gay, glamorous, changing moods and motions of the city accompanied by a bright up-tempo musical score composed by Ray Martin. The beat of the original theme picks up the tempo of the fun city, its skyscraper skyline, imposing bridges, highways and airports, night clubs, museums, churches, quaint side streets and the warmth of its eight million inhabitants.

In presenting a commemorative print of the motion picture to Mayor Lindsay, Dr. Charles F. Jones, president of Humble Oil & Refining Company, said "Our in-

Glimpsed at recent premiere of "New York, The Anytime City" are (left to right): producer John Bransby, W. W. Bryan, director of the Humble Oil & Refining Co., and Gene Starbeker, who wrote and directed color film.

terest in producing this motion picture reflects Humble's confidence in the City of New York, not only as a tourist attraction, but as a continuing growth center of commerce and industry serving the State of New York and the nation."

Also receiving prints were Harry M. Anholt, president of the New York Convention and Visitors Bureau, and Alexander Halpern, commissioner of the Port of New York Authority, in appreciation for assistance rendered by the organizations to the Esso marketer-sponsored production.

*New York: The Anytime City* will be made available without charge to civic, religious, fraternal and educational organizations through the 26 nationwide Humble

## A Leprechaun Points Out Office Hazards

N. Y. Telephone's Cartoon "Star" Shows "Safety Is Golden"

"More accidents happen in hospitals than in chemical plants—in hotels than in shipyards—in department stores than in auto plants. Atomic energy installations, however, have the least accidents of all. Get the picture? . . . It's not *where* you work, it's *how* you work."

So says O'B Safe, New York Telephone Company's safety leprechaun, in a new slide motion picture, *Safety Is Golden*. The 16-minute color film tackles the subject of office safety — such things as the dangers of scissors, staplers, letter openers, paper cutters, fans, duplicators, sorters, improperly stacked books, sharp pencils, tacks, pins, lighted cigarettes, high heels, standing on chairs, waste baskets in aisles and dangling telephone cords.

The company has a good program to make the office safe, but it can only work if everyone pitches in to help. "Accidents always happen to the 'other guy', but it takes only one accident to make *you* the other guy," the film points out.

O'B Safe, the cartoon character who stars in the film, has been the New York Telephone Company's safety leprechaun for almost two years. Before his film debut he had appeared on dozens of posters and folders since he was originated and named in a company-wide contest early in 1965.

*Safety Is Golden* is the second safety film made for the company by Gotham Film Productions, of New York. The first, *Safe or*

*Sorry*, on off-the-job safety precautions, won an NVPA award at its release last year.

The new film is interesting and amusing as well as being an effective safety vehicle. It was written by Jim Lehner, co-author of hit comedy record, *The First Fo-*

Meet New York Telephone's safety leprechaun, O'B Safe

ily. A musical score in a "Modern Irish" vein to complement a up-to-date leprechaun was composed and conducted by Hal Heings, who wrote the music for Broadway hit, *Superman*. Producer and director was Susan Way

The film will be seen by all company employees. It is also being used extensively by other Bell System companies.

# The Vista Volunteer on the Job

Moving But Unsentimental, "A Year Toward Tomorrow" Shows Vistas at Work in Two Contrasting Situations

VISTA", said a representative of the Office of Economic Opportunity, "is a tough experience that's the way we want to look in the film." Saying more than that, he sent director Edmond Levy looking for several localities in the East and West where VISTA volunteers serve in what is called "the domestic peace corps." Commissioned by producer Carl Ragsdale, president of Sunbeam Films, Levy was in search of outstanding volunteers and personalities of same magnitude.

The resultant film, *A Year Toward Tomorrow*, is a moving but unflinching depiction of the VISTAS' work—and their inner lives—in an almost thankless

Original photography was in 35mm Eastmancolor and the film will be released in 16mm in a 20-minute version, as well as a 10-minute version.

After screening a rough cut, Paul Newman was sufficiently moved to contribute his talents in the form of a strong, soulful and understated narra-

## With People They Serve

VISTAS serve in poverty areas all over the country, receiving almost no salary and a living allowance which averages about forty dollars a week. The volunteers live in slums and shacks, trying

to stimulate the poor to greater achievement in employment, nutrition, education and housing.

to stimulate the poor to greater achievement in employment, nutrition, education and housing.

The VISTA volunteers whom Levy selected were 25-year old Eric Metzner, an Air Force veteran assigned to Atlanta, and two young women in Lukachukai on the Navajo Reservation—Karen Murkett and Laurie Bergler. In each case, the story line was based on actual experiences of the VISTAS. Although their more dramatic experiences have been featured—robbery, life-and-death issues, and violent rejection of help—the patient, day-by-day effort to build a relationship with the poor and slowly bring them around to another way of thinking is also portrayed in the film.

## Two Entirely Different Areas

The two settings, Atlanta and Lukachukai, offered a dynamic contrast to each other. Lukachukai is a bucolic, mountainous setting and the Navajo culture is stamped with an exotic appeal. The two VISTA girls lived in a mud hut and chopped their own wood for fuel. To capture this special flavor, Ragsdale selected cameraman Ross Lowell, whose sensitivity to color and lyric imagery was particularly appropriate. Lowell made considerable use of reflectors of his own design for interior lighting to give more natural lighting effects.

For the filming in Atlanta, where the mood was turbulent and urban, Ragsdale chose William

A Vista volunteer helps a Navajo youngster with her pre-school lessons.

Paul Newman, narrator of the film, with Karen Murkett of the Vistas.

Garroni who worked on the Italian neo-realist films of the fifties with Rossellini and De Sica.

The Lukachukai part of the film covers the adjustment that the two young women have to make to a new culture which makes unaccustomed demands on them. For example, it was necessary for the VISTAS to learn Navajo in order to be effective in their jobs.

## Aid in Nutrition and Teaching

Their principal accomplishments were in their fields of nutrition and pre-school education. They found that many of the Indians received rations of government surplus food but were unable to make use of it

because they had no skill in preparing it tastefully. As a result they fed this food to the pigs.

Overcoming this resistance was the task of VISTA Laurie Bergler. Karen Murkett concentrated on teaching pre-school children English so that they would get a good start in their education.

In Atlanta, Eric Metzner worked at getting children of school age into school. This entailed one very dramatic sequence where he must trace down an illegitimate boy's birth certificate. Another of his achievements dramatized in the film was turning a disorganized community action program into an effective instrument of self-help.

## Script Blends Two Story Lines

The blending of the two situations was skillfully conceived in the script so that the two quite different story lines harmonize quite effectively. The integration was further helped by Frank Lewin's original music score. Lewin's ability in dramatic scoring has been consistently apparent in his work on two widely-seen television programs: *The Detenders* and *The Nurses*.

Vista volunteer Eric Metzner helped get Atlanta youngsters into school

## Eli Lilly Film Had to Reach Field on Time

"Fertility Control" Helped Introduce New Oral Contraceptive

**W**ORLDWIDE INTEREST in soaring population totals is having counterpart implications in the area of control of human conception. Biological and pharmaceutical discoveries and subsequent product development have entered a dynamic phase.

Marketing of such products cannot be launched until countless months of research and testing are followed by Federal approval. It is then that activity in the field can and must be intensified. Time is then, and only then, a key factor.

**Needed Film to Launch C-Quens**

A noteworthy example of well-integrated professional skills at work followed the recent U.S. Food and Drug Administration's official approval to Eli Lilly and Company for its new oral contraceptive: C-QUENS. The Indianapolis pharmaceutical giant found an immediate need for a comprehensive motion picture which was to serve the dual purpose of indoctrinating its 1,000 man field sales force and to launch product promotion in professional showings.

Lilly's Director of Promotion Planning and Services Division, James L. McDowell, Jr., headed up the project which required a film to review the subject of contraception and modern control of conception by means of female hormones. The film had to be completed in record time and it had to be of the very highest quality and completely authoritative. Dr. J. M. Maas, Senior Physician in Lilly's Research Department was

Dr. Joseph W. Goldzieher narrates the Eli Lilly film "Fertility Control" produced in record time for showing to the company's sales force.

assigned the task of writing the film text. Joseph Zemlick and George Miller assisted Mr. McDowell on the project. Aegis Productions, Inc., of New York City, was to produce the subject.

**Well-Organized Group Effort**

With organization of effort as the key, this group turned out a carefully-documented, well-researched script in short order. Mr. McDowell made policy decisions, Mr. Zemlick supervised carrying out of policy; Mr. Miller, Lilly's Audio-Visual Associate, gave knowledge and experience to the development of the screen material under the medical direction of Dr. Maas.

On completion of this working script, Aegis began filming, completed camera work in just two days under the direction of Sidney Millstein, studio president. Editing began immediately, supervised by Herb Leventhal, Aegis Vice-President. And just three days from the day when filming began, a nearly-flawless answer print came out of Du Art Film Laboratories in New York and was on board a jet to Lilly headquarters in Indianapolis. Working on a standby basis, Du Art produced the answer print within hours after receiving the A and B rolls from Aegis.

**Completed Prints in Four Days**

Working over the weekend, following client approval, Du Art produced the inter-negative and completed and shipped 57 release prints in just four days' time. With but one exception, these release prints were rushed by Air Express to all parts of the U.S. for special meetings of Lilly's district sales groups. All but one of the prints arrived in perfect condition and in ample time. The only delivery problem involved a print sent by local truck from New York City to Yonkers — 10 miles away. When that print failed to arrive several days after dispatch, an emergency call brought an immediate replacement. Within several hours, Du Art came up with another miracle: the replacement print was made and rushed by special courier in a taxicab to be used in a meeting in Yonkers that same afternoon!

This Eli Lilly film, titled *Fertility Control*, is a 40-minute color subject which places emphasis on the anatomic and physiological as-

pects of the reproductive cycle. To make the subject more meaningful, ample use of animation (planned by Mr. Miller and the company's supervisory committee while the script was being developed) was made. As a result, while the script was being finalized, artwork was being completed by Tony Delmar, noted medical animator.

Narrated by Dr. Joseph W. Goldzieher, *Fertility Control* makes considerable use of the Cellomatic rear-screen projection system.

Despite the fact that "crash" programs often produce their own crashes, this picture turned out

to be a double winner. It took bronze medal for excellence in class at the New York International Film Festival and has received a "Golden Eagle" CINE (Council on International Nontheatrical Events) as one of the films deemed most worthy to represent the U.S. in overseas festival competition.

The film's success was underscored by the subsequent prints, with slight variations which have been turned out by Du Art with the English as track. In addition, prints have been produced in both French and Spanish versions for overseas use.

## 25th Anniversary Tribute to Les Novros

**O**UR "Good Citizen of the Industry" nomination for this month goes to Lester Novros, president of Graphic Films Corporation, Hollywood, whose firm observes its 25th year as an independent producer in 1966 while its founder has just been named a full professor with adjunct rank in the Cinema Department of the University of California's new School of Performing Arts.

1941 was an auspicious year for Les Novros. He first taught at USC in that year—and also organized Graphic Films Corp. Formerly on contract to Disney Productions (1936-1941), his last production with that studio was *Fantasia*, in which he received a screen credit.

Since then, Les has served as a consultant to the RAND Corporation, working on the Satellite Project in the early days of its conception. He has also served as consultant to the USAF on the design of the wing/group program and to the Human Resources Laboratory of USAF on a project aimed at analysis of educational films.

**Consulted on Major Projects**

Graphic Films produced three films for the recent New York World's Fair, including the Cinerama-KLM film *To the Moon and Beyond*. An outstanding film is a feature of Abbott Laboratories' *Chemical Man* exhibit in the Chicago Museum of Science and Industry. Graphic Films' work has been honored at the Venice Film Festival (1953-54); at the Edinburgh Film Festival and the American Film Festival. Bronze plaque honors were given five films on general safety by the National Committee on Films for Safety.

But this native of Passaic, N. J.

Producer Les Novros: his company is observing its 25th anniversary.

and former student at the National Academy of Design, Art Students League and the Museo Prado in Madrid, has found it to share his knowledge with other workers in this field.

Since 1946, following his professorship of the Filmic Expression classes at USC, he has continually given part of his time as a lecturer in Cinema at that university. In addition, he has contributed regularly in the development of the department's curriculum.

**Inspires Faculty and Students**

In recommending Les Novros for appointment to the rank of full professor, Dr. Bernard Katz, USC Cinema head, summed up our feelings when he told his superiors that "Mr. Novros is an outstanding teacher and a source of inspiration to both faculty and students. Our staff join in recommending his appointment in recognition of great contributions he has made to Cinema at USC and to the whole field of film production."

## Fresh New Look for a Classic Teaching Film

With Nearly 5,000 Prints of "Human Reproduction" In Use  
 Audio Producer Alex Gansell Has Created Fine New Version

1948: art is detailed and clinical.

1965: today's artwork is stylized.

1948: typical medical school model.

1965: beauty of gracious statuary.

### Order New Version of Film

Last year, McGraw-Hill asked Audio to remake *Human Reproduction*. For one thing, the original was in black and white and color has now become almost obligatory (the new version is available in both color & monochrome). The present era has also made it possible and desirable to use an even greater frankness in presentation.

Gansell applied himself once more to now somewhat more complex demands of his subject. For example, the choice of color

scheme for the animated portion (the major part of the film) was critical from both creative and technical points of view. A tribute to the correctness of the original is the closeness with which the new edition adheres to its physiological presentation.

But a new richness has been added—in the use of color, in the poetic quality of the live action preamble and coda to the animated scientific discussion and — thanks to our changing society's increasingly permissible frankness

— in such matters as discussion of anatomical details and in the use of key terms. Thus, in the 1965 production, the viewer encounters such words as puberty, ejaculation and hormone, which had no place in the earlier version.

### Group Responsible for Content

These and other points were developed by a group which included producer-director Gansell; script-writer Harry Olesker; Dr. Mary Calderone, a distinguished authority on sexual problems of adolescents; Dr. Diehl; Paul Foster of McGraw-Hill; Audio's animation supervisor Nick Cancilla and his associate, Ed Wagner.

The film begins with a series of vignettes, building the mood for the technical discussion. In charming live-action progression from flowers and insects through pairing animals, then animals and their young — in casual transition to humanity: a marriage scene, mothers and their children and finally a pregnant woman and her husband—viewers are brought by Gansell's imaginative filmic navigation to life's starting point.

With matter-of-factness as effective as it must have been difficult to maintain, Gansell then launches into a fascinating journey across a series of brilliant anatomical "maps." Brief and clear, each step along the road of life is followed and examined.

The film beautifully captures the majestic inevitability of the female menstrual cycle, ticked off day thru day for several cycles. None of the wonder is lost of the embryo's development into fetus, and finally of the child butting its way from mother into life. At birth, the animation ends and viewers see a live infant, so fresh-born it is still entwined in the navel-cord. The film ends with children — of all kinds, of all races — with the beauty of childhood symbolizing life's richness, in a fine new edition of *Human Reproduction*. •

1948: father considers his curious son's questions . . .

1948: nature works her wonders . . . pairing lions in mating scene

## AV Dealers Hear Congressional Lead at 27th National Audio-Visual Convention

Audiovisuals' Dynamic Role in Education is Stressed at July Meetings and Exhibits in Washington-Hilton

**T**HE FOCUS from which all the blessings of Federal Aid to Education flow was visited last month by some 4,000 of the audio-visual dealers and manufacturers' representatives as they gathered at the Washington Hilton in Washington, D. C. for the 27th National Audio-Visual Convention and Trade Show.

The four-day meeting opened on Saturday, July 16 amid apprehension that the air line strike would seriously impair attendance for this first meeting outside Chicago in the history of the dealer organization. But sales meetings of national manufacturers, distributors and the bright promise of a generous Federal Aid program aided by a Trade Show in which 193 exhibitors displayed their new product lines, brought a reported record attendance.

### 30% Increase in Registration

According to NAVA vice-president and general manager James Thompson, registration was up 30%, "zooming" from 1965's attendance of 3,302 to 4,143 dealers, their wives and a widely varied number of educational users, government representatives and others concerned.

The 1966 convention theme "Audio-Visuals — Dynamic Communication" emphasized the role of sight sound tools in the field of formal education. Keynoting the program at its first morning session, Saturday, July 16, Senator Wayne Morse (Dem. Oregon) declared that the audiovisual field "is entering on a period of expansion compared to which the past year will seem stationary." Morse, who is chairman of the Senate Committee on Labor and Public Welfare, also had this to say:

### Staying Ahead in Brainpower

"If I had to name the five or six most crucial issues which face the nation, I would put high on that list the importance of providing all of our young people with the greatest opportunity to develop their native talents through education to the maximum of their potential abilities.

"We can never stay ahead of Red China or Soviet Russia in manpower; we had better see to

Senator Wayne Morse: education of the most crucial issues the nation... we must stay

it that we stay ahead in brainpower."

At a concurrent "Education Forum" held during the Convention, Congressman Adam C. Powell (Dem. N. Y.), chairman of the House Education and Labor Committee, was the honored guest of the Virginia Education Institute as that group hosted a luncheon.

### Schools "Starved for Equipment"

Congressman Powell attacked the U. S. Commissioner of Education for taking the position that too much equipment and too many materials were being purchased under the Elementary and Secondary Education Act Program.

Powell pointed out that the nation's schools had been "starved for modern equipment and materials for years." He stressed that if schools chose to ignore provisions of the new Act to remedy historical lack of equipment and materials "this should be their right."

### Audiovisual Budgets Up 5%

Congressman Powell also urged for the establishment of an Audio-Visual Bureau in the Office of Education, "where school administrators and teachers might turn for impartial, unbiased advice in obtaining tools for improved classroom instruction."

At the annual meeting of NAVA's Business and Industry Council, school spending also played a dominant role as Council Chairman Robert B. Abrams disc-

optimistic figures reported by educational magazine (School Management). The journal's survey recently indicated that public spending for audiovisual instruction increased 54 per cent in 1955-56 school year and reached a total of \$187 million, compared with \$119 million spent in 1954-55.

The largest part of this expenditure was for salaries, which totaled \$36,420,000 for audiovisual personnel. Over 40% of the nation's school districts now have no salary expenditure allocated to this area, but only 20% employ any audiovisual instructors. The second largest expenditure was \$5,815,000 spent for 16mm film outlays for film rentals tot-

in no uncertain terms," Dr. Lieberman said, "to harness the results of medical research to the benefits of mankind. He hasn't told us how to do it — he just said 'do it.' We are here at this meeting to discuss new technology and its role in helping to meet the President's request."

"Here in the United States," the career Public Health officer continued, "new communications technology is needed to help solve the health manpower crisis. It can contribute admirably to the academic and professional education of the cadre of medical and ancillary personnel so badly needed in numbers not now available.

#### Vital Weapon in Health Field

"In the growing inventory of audiovisual tools and materials now available to us," he continued, "we have a vital weapon in the fight to bring health and medical care to the American population and to the people the world over. Many world problems stem from reluctance to change old habits and superstitions. Here is a ready-made job for the education of vast publics via pictures and sound in many forms."

During the past year, the Public Health Service Audio-Visual Facility distributed more than 52,000 audiovisuals to all 50 states and to 72 nations outside the United States. In addition to continued production of its films in 16mm format, "the Facility has pioneered in the exploration of 8mm films as teaching devices in schools of the health sciences," according to Dr. Lieberman.

#### Institute for Training Men

In other "action" phases of the Council's Sunday afternoon meeting, Murray O. Cunningham, chairman of the Institute co-spon-

sored by the American Society of Training Directors and the dealer association, disclosed that an expanded curriculum for the November 6-11 sessions "will include workshops for the preparation of materials, TV handling and videotape recording."

NAVA Task Force chairman, Al Hunecke (DuKane Corp.) reported on the nation-wide response to the Association's "Talk is Not Enough" multi-screen presentation on audiovisuals' role in business and industry. Among the new projects being considered by the Council are an architect's handbook, a reprint service and a new edition of the Speaker's Directory, listing industry people

NAVA President Max H. Rarig, of Seattle, a veteran in the industry.

available to address clubs and other groups on the use and values of audiovisuals.

#### Rarig Heads New Slate of Officers Elected by Dealer Association

LEADING NAVA into the 28th year of this national audiovisual dealer organization is Max H. Rarig, president-elect who took office in Washington last month. This 39-year veteran of the business is a life-long resident of Seattle, Washington and served on NAVA's Board of Directors for the past nine years. He was its recent first vice-president and chairman of the Washington convention. As president of Rarig's, Inc., in Seattle, Rarig is active in both education and the business field and a well-known film producer.

Frank S. Bangs, Wichita, Kas. dealer, was elected first vice-president. He is a former Naval officer and has been in the field for 21 years, having served as a NAVA regional director, secretary and second vice-president.

Second vice-president for the coming year's term is John C. Ellingson, also from the Pacific

Northwest region (Spokane, Washington). A 26-year veteran of audiovisual selling and service, he has been a western regional director, treasurer and secretary of the association.

P. Ray Swank, president of the St. Louis company which bears his name, is the new secretary of NAVA and Alan P. Twyman, Dayton, Ohio, is now treasurer. Both men have long been active in the field: Swank for the past 29 years and Twyman for 18. Twyman is also chairman of the association's Film Council, which handles affairs of film rental libraries.

Among the new directors named in Washington are: Paul Cox, of Hollywood, Calif., a director-at-large; and I. L. Miller, Fort Worth, Texas, also a director-at-large. Regional directors for 1966-67 are: Nelson C. White, Baltimore, Md., (Middle Atlantic Region); Robert Hiller, Chicago,

Congressman Adam Clayton Powell, director of U.S. Audio-Visual Bureau.

\$10,011,000 and \$7,576,000 spent for purchase of tape records.

#### Public Health A-V Head

The Industry and Business Council heard Dr. James Lieberman, director of the U.S. Public Health Service's Audio-Visual Facility in Atlanta, Georgia, who delivered a keynote talk to that session Sunday, July 17.

President Johnson has told us

NAVA's newly-elected Board of Directors (standing, l to r) Directors Jasper Ewing, Jr. and Martin Melnyk, ex-officio Jerry Denbo, Mike Swank, Director Committeemen Charles A. Musson, Larry Singer and Howard Wilson; Nelson White (director); Cliff Squibb (Exh. Com.); I. L. Miller, (director); Howard Wilson (Exh. Com.); ex-officio Harvey Marks,

Don Warner (Exh. Com.); Lester E. Norstad, Ronald Nelson, Robert Hiller, Arnold A. Nord (directors), and ex-officio Robert P. Abrams. Seated (l to r) are Robert Kreiman (Exh. Com.); Treasurer Alan P. Twyman; Director Paul Cox, Board Chairman Eloise Keefe, President Max Rarig; First V.P. Frank Bangs, V.P. John C. Ellingson, Directors Ann Vath, Boggs Huff,

# National Audio-Visual Convention Report

(CONTINUED FROM PAGE 43) Ill. (Midwestern), and Arnold Nored, Lubbock, Texas (Southwestern).

Elected as liaison representatives to the association's executive committee were Boggs Huff, Nashville, Tenn. dealer and Paul Cox.

### Other Events on the Program

Other Convention highlights included a meeting of the Audio-Visual Conference of Medical and Allied Sciences and a talk by George Lamb, NAVA legal counsel, who spoke on "Trade Associations and Anti-Trust—Cynical and Realistic Views."

Ben Smith, Southwestern Bell Telephone Company executive, inspired and amused a general session audience during the convention with his challenging talk on "Salesmanship."

### 193 Exhibits in Trade Show

Government audiovisual people, school and college people from the region and many eastern states and a number of other interested users of sight sound media joined the dealers and their employees attending the NAVA Convention in touring the extensive Trade Show at the Washington Hilton.

193 exhibitors, representing equipment manufacturers, film and filmstrip producers and various service agencies, filled 265 booths and nine adjacent display rooms. Within the 30,000 square feet of exhibit space, were most of the nation's makers of audio and visual equipment for projection, teaching machines, tape and video recorders, etc.

### New Equipment for Projection

Among the equipment exhibits drawing much attention were Fair-

child's new Mark IV-RV cartridge sound film projector facilities for recording directly the MoviePak cartridge; Teecolor's 8 and Super-8 "Instamovie" projectors; DuKane's Model 9A1070 "Electronic grammer" with its eight color systems which permit automatic of filmstrips, slides, motion pictures and tape in multi-media presentations.

Panacolor's new and quite revolutionary (2 3/4" wide film) motion picture projector made its debut at the NAVA Trade Show. This unique apparatus will handle up to two full hours of sight sound on one magazine-load cartridge containing up to 12 separate 10-minute subjects. The firm supplies the special processing required for this equipment.

General Electric showed its MARC-300 projection lamp cigarette-sized quartz arc which is said to outperform 1000-watt, incandescent systems by up to 50 per cent; and the Audiscan System a 13-lb. self-contained, cartridge load sound motion picture projector which will take any length presentation up to 26 minutes.

### Some Notable Exhibit Items

Other notable exhibits included those of Bell & Howell, with Autoload 16mm filmstrip and projectors; Genareo, with a reversible electric slide changer for 3 1/4 x 4" slides.

Graflex, with one of the largest exhibits at the convention, featured a complete line of audiovisual equipment. Hudson Photographic Industries showed desk-top projectors, editors and programmers. Kalart Victor displayed new series 75 16mm sound projectors in its show booth.

At left, top to bottom: Business Screen's camera tours Trade Show. Below: Kay Shaffer "hosts" the Better Selling Bureau exhibit at Hilton.

# "SPACE PROJECT"

Johnson & Johnson Film Takes Up Problem of Inner Space

ONE OF THE IRONIES of modern life is that while the conquest of outer space has captured not only the national imagination but also a slice of the national economy, the conquest of other, more mundane space has remained largely a matter of unheralded industry or local community efforts.

It would seem that the closer we get to more immediate space problems — the less attention it attracts from those directly concerned.

In the sector of the workaday world, however, the problem of space and its creative management is a subject not only for thought but for direct and concrete action. The problems faced by the retail pharmacist as the case in point are at least the headlines of a modern man or an astronaut's space problem, but his predicament in coping with the space in which he does his living has concerned Johnson & Johnson which for the past 2 years has been researching and doing something about it.

Recognizing that "today, with more people, more products, and more promotions than ever before, space management is a key problem for pharmacists" the world of Johnson & Johnson has collaborated with Henry Strauss & Co. in New York to produce a motion picture designed to help the pharmacist help himself.

## Genesis of Continuing Effort

*Space Project*, a 20 minute black and white film, forms the nucleus of the latest of Johnson & Johnson's continuing programs for the improvement of retail pharmacies. The underlying theme of the film, as is the emphasis of the program itself, is that "change is a constant challenge" and that the success of a pharmacy in meeting the needs of its customers and

in maintaining its prestige in the community depends on how the challenge of changing business conditions is met.

The film points out that meeting change with change is the only way the pharmacist can keep abreast in this "space age of selling". Modernization is seen not as a major overhaul of facilities every

Johnson & Johnson representative discusses ideas with a pharmacist.

ten years or so but as a continuous process demanding the pharmacist's attention nearly every day.

A major part of the problem, as shown in *Space Project*, is that many of the changes that can affect a pharmacy so greatly aren't easily discernible to the pharmacist. The changes that confront him are more often evolutionary rather than revolutionary and, consequently, pass unnoticed until finally, under their accumulated weight, his pharmacy becomes out-of-date.

## Key Objectives of the Film

The main objective of *Space Project* is not only to show how these changes take place and what effect they can have on a business but also to show how, with the help of Johnson & Johnson's several modernization programs, the phar-

With special effects, this sequence in "Space Project" asks pharmacists: "will what they see through your window draw them through the door?"

maciest can meet and overcome them.

Traveling shots at the beginning of the film are effective in showing how a typical suburban area has changed so that it is now, in effect, a minor city in itself. What may have been almost imperceptible to those actually on the scene, becomes in the film an obvious and profound change in the way of life of a community and the people serving it.

## Neglect Can Reverse Progress

As an integral part of the community structure, the local pharmacy is seen to undergo its own series of changes. It is a modern store but with the aid of rapid dissolves the film shows how by neglect the accumulation of small changes largely undoes the benefit of new fixtures and seemingly up-to-date methods.

By compressing time, the film makes the little alterations glaringly obvious. Aisles become cluttered; whole shelves hidden from view; important items out of reach. In making it possible for the pharmacist to see what is happening day by day, the first of *Space Project's* objectives is realized.

Outlining the problem, though necessary, is only halfway toward solving it. *Space Project* goes on to show how the pharmacist can most effectively cope with the dilemma

of handling more and more products and more and more promotions in the same amount of space.

In a series of statistical vignettes the results of marketing surveys are presented with such graphic impact that their effect on the retail pharmacy is more than just understood. The audience almost immediately accepts the idea that space management is the key to the efficient management of any pharmacy and that in the Johnson & Johnson program lie the simple but effective solutions to the most annoying space problems.

## Sixth Program in J&J Series

The *Space Project* program is the sixth in Johnson & Johnson's series of programs designed to keep the retail pharmacist abreast of the changes that can so profoundly affect his ability to serve his community. Under the supervision of W. E. Sawyer, J & J's Director of Merchandising Services, this new program and motion picture is currently stimulating the modernization of thousands of retail drugstores in the United States and abroad. The conquest of space — selling space, at any rate — seems to be at hand.

*Space Project*, the motion picture and related material, is available free to pharmacists and their associations from Johnson & Johnson, Merchandising Services, New Brunswick, New Jersey. •

... uncluttered and inviting department is in sharp contrast to . . .

... this cluttered scene which has become a veritable hazard to shoppers.

New sales plan is recorded on videotape as it is presented by Edward Fulop, president of Pacific Northwest Life Insurance Company (at blackboard). Supervisor Tony Attanasio mans the camera and sales director Bill Neilson is operating the Ampex recorder as plan is videotaped to show new agents.

## Tape Replays Improve Agent's Technique

Videotapes Help Train Agents for Pacific Northwest Life

ON THE SPOT videotaped sales presentations made by the company's agents for immediate playback and review by the men and their supervisors are helping build an already fast-growing regional life insurance company's business in the Pacific Northwest.

That's the name of the firm: Pacific Northwest Life Insurance Company. This Portland, Oregon, organization has increased its volume to more than \$12 million since it began selling in October, 1965. The company operates in Oregon and Washington and has about 60 agents.

"Saves Lots of Executive Time"

"Our portable Ampex videotape recorder is a significant training tool," says company president Edward S. Fulop. "It is particularly valuable in helping our agents get a better line on their selling techniques. It also saves a lot of executive time that would otherwise be spent working with agents."

He notes that the "videotape recorder has been enthusiastically

Sales chief Neilson (at right) with supervisor Tony Attanasio as they record new sales plan

received by our agents and is in constant use. We have had to compile a time schedule to allocate periods when individual agents can use the machine."

In addition to the videotape recorder, Pacific Northwest Life's video training system includes an Ampex closed-circuit television camera and a monitor for immediate viewing of the presentations. Here's how the firm used the system during a recent special meeting of its agents:

Record Talks for Future Shows

Presentations by Henry Schlink, home office supervisor and by Mitchell Walker, Oregon manager of the Retail Credit Company, were recorded for future viewing

Pacific Northwest Life's president Edward Fulop (at right) discusses closed circuit system with supervisor Henry Schlink, of home office.

## HOW THEY USE VIDEOTAPES IN TRAINING SALESMEN

by new agents and by those who missed the meeting. A presentation of a new selling plan by Fulop was also taped.

In addition, the agents saw a videotaped presentation of a new company program, which had been "acted out" several days earlier by a supervisor and general agent. They had been able to re-

hearse and polish their presentation until it was just the way they wanted it.

The video training equipment set up in a special room at home office which has been aside for training. But the recording equipment will also be taken to agency offices for training and recruitment purposes.

Allied Van Lines' director of marketing Jack E. George (standing at left), conducts one of company's coast-to-coast sales seminars at which agents see videotaped panel presentations featuring successful sales

## Allied Van's Tapes "Move" Men in Field

Formulas of Seven Successful Men Shown at Sales Seminar

INNOVATORS in the moving industry, Allied Van Lines, Inc., of Broadview, Illinois, is pioneering another "first" in using videotape recordings for the training of its agents in new sales techniques being applied in that business.

Allied's director of marketing, Jack E. George, notes that the videotaped sales presentations involve panel discussions in which seven company agents at widely-scattered locations reveal the successful selling formulas they use to build volume in various key markets.

Provide Guidance for Agents

"We have found this new vehicle to be most helpful," he says, "in our efforts at the national level to provide assistance and guidance for our network of approximately 1,200 agents in the servicing of consumers' household goods shipments and in the transportation of such specialized items as electronic data computers, exhibits and displays for corporations."

Videotaped material was used in sales seminars held coast-to-coast for Allied agents. Material was entirely prepared by members of the company's staff.

"Reactions of our agents," con-

tinued George, "were most favorable, with many comments about the fresh and lively approach. We also feel that we are able to get across many points that will help our agents in this highly-competitive moving industry and to provide better services for customers."

Share Experience of Best Men

"Additionally, with this equipment, we had the advantage of having the seven agents 'appear' at our seminars as if they were in the same room. Under normal circumstances they would not have been able to be on hand for all our meetings because of heavy local agency commitments."

Additional tapes are scheduled for production, covering other training material and Allied expects that regional field representatives will present these to agents in their own local areas. Eventually the company expects to use its videotape recorder for instructional programs on other phases of operations.

\* \* \*

EDITOR'S NOTE: More reports on videotape applications will appear in subsequent fall issues.

## Film Takes "Hydroheater" to the Buyer

Milwaukee Firm Shows Heater Features on Prospect's Desk

HOW DOES a relatively small manufacturer expand sales of existing product line of exceptional merit? The management of Hydrothermal Corporation, Milwaukee, Wisconsin, faced this question in the marketing of its new "Hydroheater" (a device for heating water or other liquids) by the injection of live

action led to the production of Super-8 Technicolor "Instant" cartridge films, visualizing the mixing tests and delineating the advantages which the new equipment and sales representatives are taking "out of the copy" and into customers' hands across the nation.

### Show Product Capability

A series of engineering tests, conducted at the Milwaukee School of Engineering's Heat Power Laboratories, initiated the project. Assigned as a senior engineering project to Dave Brown, the fundamental purpose of the tests was to determine the *additional capabilities* of the Hydroheater over any other uses. Two special units were constructed with viewing ports and partial glass covers to reveal the mixing action of steam and liquid. All past units and test units were made of either conventional carbon or stainless steel.

The project revealed that mixing took place at very high speed and with great turbulence. Innovations in the test procedure were introduced. First, an insert was constructed for the injection of a red dye into the liquid at a point where it enters the Hydroheater connection. Secondly, a high-speed cam-

erap shot for "Hydroheater" film is Mike Svecuson, Omega Productions.

era was used to capture the mixing action while the unit was in operation.

### Film Documents Test Results

Results were dramatic and led directly to management's interest in the production of a documentary motion picture to show these tests. Omega Productions, located in the Milwaukee metropolitan area, was assigned the film project and at the producer's suggestion, the film was originally conceived for release primarily in the "Super 8" format and to be shown on Technicolor "Instant" projectors.

Such cartridges, Omega pointed out, would enable Hydroheater's management and sales representatives to carry both equipment and several cartridges anywhere

Dave Brown examines special glass Hydroheater test models at the Milwaukee School of Engineering Heat Power Laboratory.

and to demonstrate the actual workings of the product in the comfort and convenience of prospects' offices and plants.

### Work Completed in Six Weeks

Time was short: a production schedule of only *six weeks* had to be met to conform with a scheduled sales campaign for the Eastern U.S. Company personnel

Hydrothermal Corporation executive Gerald Donnelly was shown first answer print of "Hydroheater" 8mm film by Ervin Penkalski of Omega Prod.

worked long, hectic hours with Omega staffers to shoot inserts, help in editing and in preparing titles for super-imposition on these 8mm silent films.

Hydrothermal's film has been well received, has aroused consid-

erable interest among existing customers and potential users of the heaters. The cartridge-load projector proved to be a most convenient and now highly-valued sales tool for this progressive concern and its fieldmen.

## Unlocking the Secrets of "Metal Crystals"

Color Film Is Sponsored by American Society for Metals

*Metal Crystals in Action*, a new film sponsored by the American Society for Metals, offers a new, illustrative approach to explaining the inherent characteristics of individual metal crystals. It serves to unlock the secrets of the great strength of metals which lie in the great forces that bind the crystals together.

Designed for use by almost everyone in the metals field from students to management — foremen and lab people in metal industries particularly — the new half-hour color motion picture replaces a black and white film of many years ago. It was produced by Film Graphics, Inc., of New York.

By means of the electron microscope and new metallurgical techniques, the film demonstrates the forces within the atomic nucleus that are basic components of all existing matter.

Unique plastic hemispheres (depicting the atoms within the crystal lattice) are used to describe visually dislocations, point defects and irregular atomic crystal arrangements. These permit movements of atoms to be explained much more effectively than with the traditional "Linker Toy" representation of atomic structures.

Another unusual demonstration

in the film is that of the accelerated growth of hairlike metallic metal strands called "whiskers" on metal that has been spurred by atomic radiation in experiments at Bell Telephone Laboratories.

When more is known about the growth, structure and physical properties of whiskers, the film says, it may be possible some day to apply this knowledge in making metals far superior in strength and durability to today's metals. One of the most interesting facts about the whiskers is that their strength far surpasses the strength of the material from which they sprouted. Scientists are now learning how to grow or retard the growth of the whiskers.

*Metal Crystals in Action* is offered free of charge to responsible groups in the metals field, or educational institutions, by the American Society for Metals, Metals Park, Ohio, 44073.

### Auto Safety Research Film Shows Impact Effects on the Pedestrian

The physical forces involved when an automobile strikes the human body are investigated in *Automobile-Pedestrian Collision*, a new 10-minute 16mm color motion picture produced by the Institute of Transportation and Traffic Engineering at UCLA.

# FIRST ANNUAL BUSINESS SCREEN SURVEY OF SPONSOR A-V ACTIVITY

Report on 5,597 Audiovisual Media Produced in '65

This first segment of a new Business Screen Index of Active Sponsors and the Motion Pictures, Slidefilms and Audio-Visual Presentations credited to them in 1965 began with the most authoritative single reference source covering the field of audiovisual communication within business and industry: our own 16th Annual Production Review. From these reported references of specializing producers we identified the first group of 1,965 motion pictures and 479 slidefilms completed during the past year. Sponsors of these titles were 922 commercial and industrial companies, 60 educational institutions, 120 trade associations, 137 religious, social, health and welfare organizations and 129 Federal, state and local government agencies.

This survey was then broadened and its accuracy checked by direct contact with principal sponsors and the first total of 1,368 sponsors broadened to 1,408. 2,384 motion pictures, 790 slidefilms and 2,423 audiovisual presentations emerged after this direct-to-sponsor contact. The job has only fairly begun. Like the proverbial iceberg, only the visible segment of activity is represented and literally hundreds of titles will be added and other hundreds will never be known because of internal security, specialized uses, etc.

Worthy of note, however, is the emergence of first published data on the growing number of "audiovisual presentations" (2,423) and these include overhead slide programs, videotaped material, slides, etc. A check of the top 500 U. S. industrial concerns also revealed that a large number of these are among the active sponsors already listed. The U. S. Government is prominent in these totals with 42 departments, bureaus and agencies contributing 209 motion picture and slidefilms to the 1965 figures.

The only publication in the U. S. exclusively devoted to the field of audiovisuals in business and industry, BUSINESS SCREEN is well qualified through nearly three decades of consecutive, regular service to undertake this continuing and vital survey task. Our in-depth listing of specializing producers and Federal A-V Programs is fortified by our close, continuing contact with a majority of active sponsors. We find the challenge stimulating; the end result of great benefit to all who serve and are served by the powerful media of sight/sound today.

# Why it pays to standardize on Kodak...

**MOVIE PROJECTORS.** Standardize on KODAK PAGEANT 16mm Sound Projectors and you'll save money on upkeep. Experience records have shown how infrequently these machines require repairs. Standardization also brings you the advantages of familiarity with the machines, development of skilled operators, and greatly reduced inventory problems with exciter lamps, vacuum tubes, etc. Moreover, there are many advantages to having a single source of supply—

your trained and dedicated Kodak Audiovisual Dealer.

**SLIDE PROJECTORS.** Ours is the jamproof one. The KODAK CAROUSEL Projector with the round tray that holds 80 slides . . . any 80, including the regular glass ones. Business speakers like to use this projector because they know it always works and that it's going to handle their slides carefully. They know, too, about the six KODAK CAROUSEL Projector lenses that adapt the projector to any size of screen and any size of room.

In fact, with the CAROUSEL Projector, you can have as sophisticated a slide program as you'd like, complete with taped sound that automatically changes slides as it goes.

Another accessory allows slide dissolves from one picture to the next, opening up a new range of attention-holding, memorable program variations. Ask your Kodak dealer about the entire KODAK CAROUSEL Projector system.

For complete listing and detailed descriptions of other Kodak equipment for making and showing audiovisual material, write for a copy of our free booklet "Audiovisuals in Business and Industry" (V1-7). It will suggest when and how to use audiovisuals more effectively. A detailed bibliography is included. Just use the coupon.

Ask your Kodak AV Dealer for a copy of the new Kodak AV Products catalog.

**Your message  
printed here.**

**In 10 seconds.  
55¢.**

You can put your message on a Polaroid Land transparency in 10 seconds for a mere 55¢. That's about 23 hours, 59 minutes, and 50 seconds faster, and 1 dollar less expensive than an ordinary slide.

All you do is load the film into the camera. Snap the shutter. 10 seconds later you have your transparency.

After a quick hardening just slip the slides into the snap-together plastic frames. And you're ready to go.

There are 2 different kinds of transparency film.

Polaroid PolaLine transparency film is designed especially for line copy work. The blacks are really black, the clear areas are extremely clear. That makes it ideal for charts, graphs, diagrams...anything set in type or drawn in pencil or ink. It develops

in only 10 seconds.

The other film is for continuous tone work. You make slides of pictures and objects with it in 2 minutes. You can even take a picture of someone in the audience. And a few minutes later show it on the screen. That's guaranteed to liven up the presentation.

Both kinds of slides fit any standard lantern slide projector. Both kinds of slides can be made with the many Polaroid Land cameras that accept Series 40 film, except for the J-66.

And both kinds of slides have terrific impact when they're projected. Just imagine how much more this ad would have impressed you if it had appeared 3 feet tall on your office wall.

## PROJECTION FEATURES NO OTHER SYSTEM HAS!

### HPI GROUPSHOW™ REAR PROJECTION SCREENS

If you use rear projection just to beat room darkening problems, you're wasting 90% of your investment. Only HPI Groupshow Rear Projection Screens guarantee all these advantages . . .

- One Hand Portability—On Foot, In Car, Flying . . . exclusive folding action permits HPI Groupshow to store or go anywhere.
- No "Extra" Wide Angle Lenses—No Image Loss . . . all HPI Groupshow Screens operate with lenses in existing projectors with all the image quality of the original optical system.
- Removes Distracting Noise And Movement Of Projectors . . . standard lenses allow separation of projector from HPI Groupshow—can be hidden from audience if desired.
- Examine Images Close Up Without Shadow, Grain or Fabric Patterns . . . normal for HPI Groupshow—impossible with front projection.
- All Projected Material Accepted Without Cut Off . . . exclusive square format of HPI Groupshow yields maximum image size for movies, film strip and slides—horizontal and vertical.

**assignment grand prix:  
covered best by CM16...the camera built to take action!**

When you cover fast action like a grand prix road race, the story won't wait for you. Before you've set up a tripod, the flag is down and the cameraman with the compact, light weight gear is on his way to the next turn. He's shooting with Beckman & Whitley's new CM16 sound camera, the one that weighs in at 15 pounds including zoom lens and 400 feet of film. Shouldn't you be getting in on all the action too? With the CM16 you get a combination of advantages never before available in a professional 16mm sound camera. Including a revolutionary pin registered continuous motion transport system for superb sound and picture quality.

Built to take action by the largest, most experienced manufacturer of ultra high speed cameras, CM16 is now available. Write or phone Cine Products, Beckman & Whitley, Inc., 441 Whisman Road, Mountain View, California 94040, phone (415) 968-6220. In Europe, Kettingweg 23, Baarn, Holland, phone 5004.

Overseas Operations Being Lensed for a New Johnson's Wax Picture

A 20-minute color motion picture, titled *Something Better*, is being produced in the U.S. and abroad for S. C. Johnson & Son, Inc. by Ken Snyder Enterprises, of Hollywood.

The new Johnson's Wax-sponsored film will include sequences made at the company's Frank Lloyd Wright-designed facilities in Racine, Wisconsin, and at affiliate companies in other parts of the world. According to a company spokesman it "will provide a complete tour of the company's operations and insight into the philosophy behind the growth of this modern corporation."

Production is already under way and the film is expected to be finished early in 1967. It will be shown in the Golden Rondelle theater now under reconstruction in Racine from the original theater that was a feature of the company's 1964-65 New York World's Fair pavilion. The new film will be shown to visitor audiences as a companion to *To Be Alive!*, the Academy Award-winning wide-screen picture produced by Francis Thompson, Inc. and shown to multitudes during the New York Fair.

"8mm Training Programs" Co. Formed to Meet New Media Needs

Two audio-visual training media organizations in New York City, Industrial Education Films, Inc., and Port-A-Film Presentations, Inc., have combined talents to form a new company: 8mm Training Programs.

The company plans a library of 8mm film subjects to be planned and produced for indoctrination, training and motivation use as well as 8mm versions of existing 16 and 35mm subjects. Prints will be made available in 8mm optical sound, in cartridge-load magnetic sound and in "single-concept" silent versions.

For more information about "8mm Training Programs" write: Port-A-Film Presentations, 545 Fifth Avenue, New York City. Mention this item.

H F E SALUTES ITS "PERSONALIZED" 16MM LABORATORY SERVICE CUSTOMERS

HFE commends PARTHENON PICTURES—HOLLYWOOD . . . producer with a coast-to-coast clientele . . . winner of many awards . . . among them a "triple" in the National Visual Presentation Association's 13th Annual Day of Visuals in Chicago: First Place for *Two Cheers for Charlie*, for Mutual and United of Omaha; First-Places for *Love That Car* and *She Purrs Like a Kitten* for American Oil Company . . . and for many years a customer using HFE-Quality laboratory service.

"Cap" Palmer, like so many other prominent producers, values the safety factors HFE assures. "Safety" is what results from the extra, personalized care used to prevent damage to or loss of film. It's applied at every step, from double-check identification on arrival of material for processing or print-making, to double-check, check-out for shipping.

In between, it involves use of specialized equipment and techniques designed to preserve and protect original footage. Zero cuts and variable length dissolves from 12 to 90 frames provide perfect fades and dissolves without cutting the original scene. All special effects are indicated on cue rolls which "travel" with the A & B rolls. This special HFE "Cue Roll" method is assurance that original film will not be marked, notched, cut, or damaged in any way.

Printing originals are stored in HFE's air-conditioned, humidity-controlled vaults . . . and though 16 such vaults have a capacity of 50 million feet of film, cataloging and cross-indexing provide immediate reference and location.

Each release print is carefully inspected and properly identified in the air-conditioned projection and assembly rooms where millions of feet of film are prepared for shipment to clients all over the world. All these things add up to "safety" and quality—and safety means constant watchfulness over all film, our best assurance of satisfaction for the many HFE customers we continue to serve after many years. Come by and see how safety is applied, or see its effects in a trial order.

For complete PERSONALIZED 16mm Laboratory Service—

20 Pictures About South Africa Available for Free Loan Showing

More than 20 16mm sound films (19 of them in color) bringing the excitement of South Africa's scenery, game reserves and unusual way of life to clubs, lodges and other adult organizations through the free-loan facilities of Sterling Movies, Inc.

Four films highlight the spectacular wild life of South Africa's vast game reserves. Of these, the 18-minute film, *South African Animal Kingdom* and the 30-minute *Lake Wilderness*, are particularly high in audience interest.

*The Young Country*, a 28-minute picture, is especially suitable for showing in this 300th year of Dutch settlements in the Western Hemisphere. The black and white film reviews South African development since 1660 in a manner which draws many parallels between North American and South African history.

Address loan requests to Sterling Movies, Inc. at 43 West 107th Street, New York City 10025.

Brooklyn Botanic Gardens' Film on "Pruning Practices" For the Gardener

For the gardener who has doubts about how or when to prune, a new 16mm film, *Pruning Practices at the Brooklyn Botanic Garden*, provides a worthwhile lesson. Photographed on the garden's grounds, the film demonstrates the essentials of pruning that result in bigger and better blooms. It is 22-minute in length in color and is available for loan from the Center for Mass Communication of Columbia University Press, New York. It was produced by CMC for the Women's Auxiliary of the Brooklyn Botanic Garden.

Beginning with the time of the plant or tree in question should be pruned, the film demonstrates the tools to use and the proper techniques. Sequences then follow growth through annual maturity. Care of evergreens and deciduous trees, roses, rhododendrons, lilacs, forsythia and woody plants is covered.

The decorative use of pruning is developed in a segment on Japanese art of shaping. Care of pruning as practiced in the Brooklyn Botanic's Japanese Garden is illustrated.

*Pruning Practices at the Brooklyn Botanic Garden* received Blue Ribbon Award, 1966 American Film Festival, and a CINE Golden Eagle Award.

# How Good Is Our Image?

Focus on Basic Principles. Ideas Can Help the Communicator Do a Better

by Robert S. Scott, Aerospace Corporation\*

A formal briefing; this "straight talk" form of message delivery depends on speaker's ability.

Communication is improved by visuals: charts, slides, or good use of chalkboards at rear.

Graphic communication: facts are made vividly clear by illustrations drawn on chalkboard.

Typical management conference: are they hearing the words?

**H**OW GOOD IS OUR IMAGE? We're living in an age of imagebuilders. Everyone communicates an image to someone, all the time, even if we only have an audience of one—ourselves. Our reputations, our characters, or lack of character, are all images that communicate, truly or falsely. The hero and the villain both become images in our memories. They leave their permanent impressions in history.

Today, man's Space Age technologies challenge the security of the planet. These same unprecedented demands also challenge the state of our audio-visual art.

True, the cost of communicating is high—but the cost of *not* communicating is even higher.

### There's Power in Clearly-Defined Principle

We should focus our attention more closely on communication principles. One clearly defined principle can generate more power for communication than a dictionary full of words. Principles are like idea-pictures with lasting after-images—like symbols. You could say that a symbol is a principle—in-for-ma-tion, information.

The fundamental principles of human communication do not change—only the forms, the techniques and the processes change. The principles of communication can be applied to any audio-visual system. We sometimes like to think that our particular system is unique, that no one else knows our problems, because we're so unique too.

### Synthesis of Many Sciences, Art Forms

But human communication is a synthesis of purpose and form, of meaning and media. Audio-visual communication systems in the Space Age demand a creative synthesis of many sciences and most of the art forms.

Pictures and words are media only. Like telephones, they are meaningless until we modulate them with our purpose and our human understanding. The *means* are all worthless without the *message*.

It seems to me that today we live in an audio-visual world. Man himself is an audio-visual system.

All information or intelligence that is seen or heard is "audio-visual communication." Why don't we usually think of motion pictures as a "communication" medium—or television, or commercial radio? We're used to thinking of them as "entertainment" media, even with all the commercials. And what about newspapers and magazines and billboards and cartoons? What about books—especially the paperbacks? We "look" at them, and we "hear" the message in our minds.

We will learn more about audio-visual communication if we will reflect upon the mysteri-

ous processes by which we are able to see and hear. It is a miracle that we take so much for granted and abuse more than we deserve.

Externally and internally we are using radio and electricity traveling at the speed of light. The reason the process seems slower sometimes is that we are not as skilled at operating the equipment as the Systems Designer who created it. Audio-visual, hearing and seeing, sound and light, sound and symbol—all of these terms represent frequency patterns within the electro-magnetic spectrum.

### "To Make Known" With Sound and Light

The word *communication* means simply "to make known". Our business is "to make known" with sound and light. Our operational task as communicators is to get the message through.

We've pondered on the processes of seeing and hearing. What are the processes of listening—or of understanding? We say "knowing is power." Not by itself it isn't. Static knowledge is not power. It is only potential energy. It has to *move* to generate power. To make it well, we have to make it information and transmit it through the most efficient medium. It can generate power to motivate, or to enlighten.

We can identify the principle of communication as a kind of "binding energy". Physics books define energy as "the capacity, or ability, to do work." Nothing works very well without effective communication. It is easy to observe that communication holds a personality together—or an army together—or a husband and wife together. Therefore, it is at least an effect, "a binding energy."

Communication is not merely the carrier of frequency, it is also the modulation—both requiring energy inputs.

### "Need to Know" Has a Positive Approach

Our age is the age of the "need-to-know". The need-to-know is most often interpreted in its negative connotation—keeping someone else from knowing something that we know. The *positive* approach to the need-to-know principle is to get the word to the people who *have* to know, and expressed as clearly as possible, and in the minimum of time.

The motivation of all of man's scientific investigation through the ages, all of his exploration of the unknown, indicates the positive polarity to the need-to-know principle. It is a need to fill a vacuum in human understanding as a basis for cooperation, or to throw a light on factors leading to important decisions for more effective coordination of vital plans. Viewed from this angle, the need-to-know principle has always been the most dynamic motivating force in human history—certainly not in the text "He has no need to know", but in the spirit, "I've got to get this word to him." The message to Garcia, like an S.O.S.

But getting the message through

\*The article on this page is an abbreviation of a speech given to an Armed Force Conference in Washington, D. C. by Robert S. Scott, Assistant Director of Government Relations, Aerospace Corporation, and a Past President of the Industrial Film Producers Association.

(CONTINUED ON THE FOLLOWING PAGE)

duced technical motion pictures help complex data with meanings clarified.

Un-cut television offers the advantage of when time is communication factor.

skills of graphic artists are employed to clarify and televised industry presentations.

how we can communicate to and from outer time to study the images we create.

## We Have a Commitment to Action

**I**S THIS REALLY the IFPA President's Message? No, but it is our statement of purpose. Thanks for the job. I accept the challenge.

What IFPA accomplishes, what public image it creates, whether it thrives or withers and dies, is a result of group will. Dies?? Over my dead body! I am willing to invest my time and effort for IFPA, push beyond my usual exertion our association, become personally involved for IFPA. I am concerned about the contribution I can make . . . how much I can put in . . . to support IFPA. IFPA should have a *great* year ahead. IFPA should give expression to the many "words" in terms of ACTION.

If you are "new" to IFPA, you may be one of those who have asked, "why IFPA?" or "what is IFPA doing for me?" If you are one of the older members you may be asking, "what happened to the *old* IFPA, the one that *did* things?" If you are a *former* member, this is the time to rejoin, because in 1967 we aim to give you the answers to these questions.

We are committed to a year of ACTION.

Members want prestige, meaningful meetings, tangible signs of belonging, communications and *participation*. It is the aim of this office and the Board to contribute toward this end. So why stand alone? IFPA provides you with the strength of others. Contribute to the cause . . . *your cause*. I ask for your support, ask you to *use* IFPA as a common ground for the advancement of our profession . . . *your profession*. Help build our image . . . *for it is your image*.

The large attendance at our first Board meeting proclaimed a new interest, a rebirth of IFPA. How can we give this enchantment reality? We need to express ourselves. Be unique! Be different! We need to sell ourselves. Speak up! Get on a committee, take an office and throw yourself into ACTION. Act, show spirit—it's contagious. We need to promote ourselves . . . have a plan of publicity and promotion. And, not be modest about it. IFPA needs to get across in a definite, exact, forceful manner. IFPA has to be an egotist, in a way. We need to believe we are somebody . . . for the remarkable thing about it is, we *are*. We must believe in IFPA. Get excited about it, turn on the enthusiasm. IFPA needs to have vision, to invent things, to explore. . . .

"The future" seems to be a common theme for many groups. Ah, the future! Something everybody understands. The rosy future is the only future . . . full of promise. The future is uncharted. It's bigger than our past or present. IFPA can, with imagination, chart it. IFPA must grow . . . *will* grow. It is one of the surest ways to protect our promise. IFPA must have "guts", carry a punch and use it, show initiative, be bold and stick to its guns. So, let's get the show on the road!

August, 1966

—Gene Marcus Huggens, President  
The Industry Film Producers Association

## Los Angeles Chapter Holds First Meeting at New Peterson Studio

The first meeting of the Los Angeles Chapter following the recent National Conference was held at the Peterson Company's recently-acquired facility near Third and La Cienega on July 28.

To launch the new program year, chapter chairman Scott Robertson of Eastman Kodak introduced other chapter officers. Ed Rinker and Vern Vihlene, program co-chairmen, and Jim Newcom, in charge of publicity were on hand. Treasurer Dick Barlow and news editor Frank Maguire, were unable to attend.

Individual members were asked to introduce themselves and to tell their connection with the industry. The increased number of freelancers in most craft fields who have been attracted to IFPA was indeed encouraging. The association has been working for several years to show these people that IFPA *does* have something to offer the independent craftsman. It is his only chance to share problems and experiences with those engaged in similar occupations.

Following a brief statement by each of the new officers on their plans for the coming year, the more than 50 members on hand were shown two films. The first of these was a presentation by the American Society of Cinema Editors (ACE) in which three different member editors were given the same sequence of uncut "dailies" from the television program, *Guns, Smoke*, and asked to edit the scenes as they preferred. It was an *extremely* interesting and informative demonstration of working methods used by top professional editors.

The second film was a special "promotional" film made by the Peterson Company for Busch Bavarian and featuring Phil Harris. This was the type of motion picture which people outside of "commercial" production within large film organizations seldom see.

All future meetings of the Los Angeles Chapter will be held on the last Thursday of each month.

**No. California Chapter Grooms New Officers at Vin Agar's Home**

The Northern California Chapter installed its new officers at the Chapter's annual social meeting, during the pre-Conference period. Members gathered in Livermore, California at the home of outgoing chapter chairman Vin Agar and his charming wife, Joan, to enjoy a buffet dinner, short business session and to meet the new leadership for the 1966-67 term.

The new officers are: Larry Filby, *Chairman*; Jim Goldner, *Vice-Chairman*; Bill Murray, *Secretary-Treasurer*; Tom Fraser, *Program Chairman*; Stan Ahlborn, *Publicity Director*; and John Corso, *Membership Director*.

The program committee, already arranging events for the new year ahead, is composed of Gene Drossel, Clay Dudley and Dick Fowler (Vista Productions). First Chapter meeting is scheduled for the fourth week in September. •

\* \* \*

**San Diego "Toasts" New Officers and Hears Tuneful "San Diegals"**

The San Diego Chapter got its new program year off to a different start by following up their regular business meeting with a wine-tasting party at the home of Dave Bash, the Chapter's Publicity Chairman.

These parties in the home (and in wine-tasting parlors) are the latest thing in Southern California.

Dick Calabigelo, *Paul Masson representative, treats Dave Bash to taste of Camay Beaudouin vintage.*

**the industry film journal**

ia's land of sunshine and grapes. So, the San Diegans are certainly "in" and it was a good way for all the old, new and prospective members to relax and get-acquainted.

Entertainment for this happy session was provided by a ladies' barbershop quartet. This unusual group, the "San Diegals" are led by Margo Follis, the pretty wife

of newly-installed Chapter man Stan Follis.

New officers of the San Chapter who were installed meeting included chairman Follis, Lutz Winkler, *Treasurer*, Del Gay, *Program Chairman*, David Bash, *Publicity Chairman* and Frank Willey, *Membership Chairman*.

**Meet Gene Huggens: President of IFPA**

GENE MARCUS HUGGENS, newly-elected president of the Industry Film Producers Association, is without a doubt the most informed member on the "doings" and history of IPFA extant.

His den in Anaheim, California contains stack after stack of bulletins, notices, letters, publications and other memorabilia from the very beginning of this organization. Furthermore, Gene knows what's in these items. We're looking forward to his services as historian of this organization when his present very active term of office will have been concluded!

Born in Hanover, Pennsylvania some 39 years ago, he attended Gettysburg College there, but had his educational pursuits interrupted by a three-year hitch in the Army. He rose to the rank of First Lieutenant and served in the Quartermaster Corps in Japan.

Following his discharge, Gene returned to the campus—this time at the University of Southern California—where he received a BA degree, with the major in Cinema. While still at USC, he got his first professional job as a production assistant with Allart Pictures at the Samuel Goldwyn Studios—and an industry career was born.

He continued broadening his knowledge of film-making with such jobs as assistant director on

The "San Diegals," led by Margo Follis, were a special entertainment feature at Chapter's recent social.

Gene Marcus Huggens

the television show, *Big Top*; as assistant cameraman with special effects company at Lion Studios; as a film editor with the DeFrenes Company in Philadelphia, the International Communications Foundation, Thompson Ramo Woolf Corp. Now, Gene is Photographic Group Supervisor with General Dynamics Pomona.

In his present position he supervises the preparation of a lease of company motion pictures as well as AV presentation photography, and the preparation and publication of manuals, brochures, proposals and reports. Gene Huggens is no new to IFPA affairs, having held post as Chairman of the Southern California Chapter several years ago. He is also a member of Kappa Alpha, the national barry cinema fraternity.

All in all, it looks like another year of excellent leadership and the dynamic (yet warm) personality of Gene Huggens getting IFPA into our 10th anniversary year.

Moving? Please send change of address to IFPA headquarters

...nd director Ken Brown (center, rear) discuss scene for the film "The Cares." Script written by Frank Ash; original music by Stan Worth.

## Employees Active Citizens:

(CONTINUED FROM PAGE 24)  
...tions did so for the first time in their lives.

...most impressive was the participation of Hughes' employees who voted during the 1964 election—an overwhelming 95 percent. This was 98 percent of all registered employees. By comparison, 86 percent of the U.S. civil population of voting age actually voted — about 78 percent of those registered.

### Campaign to Be Filmed

The excitement of this year's congressional campaigns and elections is being reflected by the nation's newspapers and magazines. Reports are reaching a high pitch in California where most of the best facilities are located and the coveted governorship of the nation's most populated state is being contested.

In anticipation of a new version of "The Cares," Hughes will film all about rallies and other meetings held by the "Active Citizenship Campaign."

Mr. Barton Evans, Director of Public Affairs and administrator of the "Active Citizenship Campaign" reports that plans have been lined up for this year's effort in many of the activities are already underway.

Mr. Evans says: We are receiving many requests for information about the campaign from companies interested in starting programs of their own. We expect the whole thing to snowball before this year's elections are held in November. Presently, we have about fifty prints of the film "The Cares" in circulation."

Thus in a very positive way, Hughes Aircraft and other industries are bringing new life and meaning to citizenship. Quite possibly, their efforts will appear as a significant increase in the nation's voter turnout next fall.

### IFPA FRIENDS MOURN EDWARD SCHROEDER

All IFPA members—particularly those in the Los Angeles area—join the family of Ed Schroeder, his friends and his fellow workers at the Lookout Mountain Air Force Motion Picture Unit in mourning the loss of this dear friend on the 8th day of May, 1966. He was 76 and a member of IFPA for many years.

Ed had a long and pleasurable lifetime in the field of motion picture editing. He first entered this business in 1914 with the old Vitagraph Studios in New York City. He came to California a few years later when Vitagraph moved to the Coast, and in 1917 he joined Universal Pictures.

During the early 20's, Eddie was head of the Editorial Department at RKO Pictures. He also spent many years as an independent film editor and other years with Republic Pictures before going to the Lookout Mountain unit in 1955.

In those earlier years, Ed Schroeder was editor for many of Clarence Brown's films and on the first group of *Hopalong Cassidy* pictures.

Eddie is survived by his widow, Dorothy, three daughters and 13 grandchildren. To everyone who knew him, he was a man who literally worshipped his family. A quiet man, a perfect gentleman always and, above all, a top craftsman in his field.

## New Audiovisuals for Business & Education

### Chicago Printing Company Turns to Filmstrip Medium for Selling

☆ A growing number of enterprising printers are using the filmstrip medium to help their salesmen in the field.

Setting an example in this specialized industry is a new 12-minute strip titled *Good — and Tuesday!* recently produced for the Gunthorp-Warren Printing Company, Chicago, by Pilot Productions of nearby Evanston, Illinois. The film visualizes the physical assets of this large concern as it pictures Linotype, Monotype, Ludlow, Varitype, and IBC type composition as well as all phases of presswork and bindery operations.

Emphasis in this subject is on speed *plus* quality and the film includes testimonials from clients who have been long-time customers of the Chicago firm.

\* \* \*

### Industrial Employee Publications as Career Told in Sound Slidefilm

☆ A sound and color slidefilm (filmstrip) on the functions and objectives of industrial employee publications has been produced through the cooperative sponsorship of two industrial editors' groups and the University of Minnesota.

The program, titled *Company Publications, Heart of Industrial Communication*, was co-sponsored by the International Council of Industrial Editors, the Northwest Industrial Editors Association and the University of Minnesota's School of Journalism and Mass Communications. Prepared as a college and high school teaching aid, the new sound slidefilm was designed to interest students in a career in industrial editing.

The 13-minute presentation combines taped sound with 35mm filmstrip visuals and is available for purchase at \$15 from the School of Journalism or National Scholastic Press Association, Room 18, Murphy Hall, University of Minnesota, Minneapolis, Minn. 55455.

\* \* \*

### Slide Programs on Design and Use of Business Forms Offered Groups

☆ Three educational slide presentations on business forms systems, forms design and construction and business machine character recognition (MICR and OCR) are now being made available for business and service group showings through local offices of Moore

Business Forms, Inc., throughout the U.S. and Canada.

Titles include: *Engineering of Forms Systems* (30 minutes), *New Concepts in Form Design and Construction* (40 minutes) and *Taking the Mystery Out of MICR and OCR* (15 minutes).

Arrangements for presentation of any of these programs may be made through the district manager of any Moore Business Forms sales office.

937 N. Sycamore Ave. Hollywood, Calif.

## ews Along the Film/Tape Production Line

### Acme-Chroma Color Film Transfer Videotapes a Quality Process

The new process, being marketed under the name Acme-Chroma Color Film Transfers, has been announced by Acme Film and Video Laboratories, Hollywood, California, to general manager Mel J. Sawelson, the new process provides a transfer of color videotapes to film of broadcast quality. The process is being trade-marked.

Results from market-testing have been excellent," Sawelson said. "We had most major studios test the new process and their network testing. All agreed that the process produces fine color quality with a high level of fidelity."

The "Acme-Chroma" process was developed after three years of research and experimentation at a cost of over a quarter of a million dollars. It has the further advantage of offering color prints at reasonable prices. The new color film prints are produced at Acme's Hollywood (1161 N. Hollywood Blvd.) and also may be ordered through the company's New York office at 400 Madison Ave.

### United Air Lines Announces Two Services for Film Producers

United Air Lines, which for the past year has made a DC-8 jet available to producers in New York for their filming needs, has a similar mockup in New York City for the convenience of film producers. Information on these services may be obtained from Jack Gattis, regional publicity director, United's regional publicity office in Manhattan. Telephone number 212-22-5225.

Other announcement from United notes that producers in Detroit and nearby cities who need a copy of footage, information and a telephone assistance may get it from a newly-established publicity office headed by John Gamble. The Detroit office is located at 100 Woodward Avenue, Suite 100.

### World Publications Takes New Step in Visuals for Education

World Publications, a division of World Publications, has appointed Margaret Saul as educational consultant. Miss Saul's appointment presages the expansion of World Visuals into the growing educational market, with spe-

cial emphasis on distributive education media, vocational and adult education programs.

### Anglophoto Organization Handles Neumade Product Lines in Canada

Neumade Products Corp. has arranged for exclusive distribution of its extensive film and audiovisual accessory equipment lines in Canada through the Anglophoto organization, located in Montreal.

Through the direct line network of Anglophoto professional and amateur dealers at key locations in all provinces, with stock maintained in Montreal and Toronto, Canadian customers will get fast delivery on such Neumade items as film winders, splicers, footage and timing machines, film editing and shipping room supplies, cabinets, etc.

### FilmFair Building 15,000 Sq. Ft. Stages, Offices in Studio City

Construction is under way on a new 15,000 sq. ft. studio office building adjacent to the present facilities of FilmFair in Studio City, California.

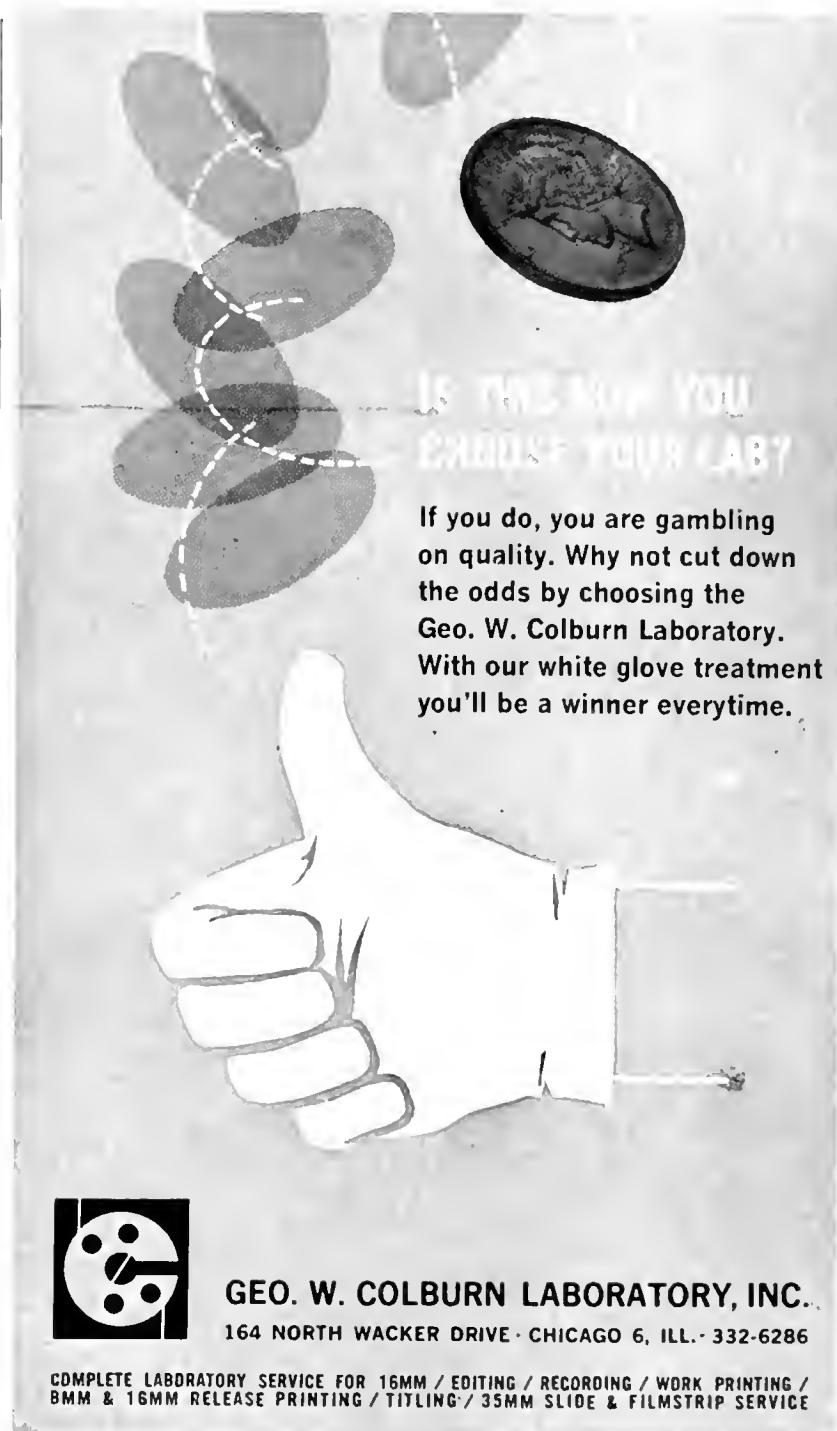

According to President Gus Jekel, the new building will have a 60 x 72-foot sound stage and a 24 x 24-foot insert stage. Twenty new executive offices will be located on the premises to consolidate various departments of FilmFair. The building site is at 10900 Ventura Blvd., adjacent to the Caluenga Pass, connecting Los Angeles and the San Fernando Valley.

### Two Canadian Companies Merge: Form Canawest-Master Films Ltd.

Western Canada's largest film production company, Canawest Film Productions, has merged with Master Films (Alberta) Limited. Canawest is a division of KVOS-TV (B.C.) Limited. The new company is known as Canawest-Master Films Limited.

In announcing the merger, Dave Mintz, president of KVOS-TV and Canawest, noted that William Marsden has been named vice-president and operations manager of the new company. Robert Willis is vice-president and film director of Canawest-Master.

The merged firm will continue to operate studios and offices at 815 17th Avenue S. W., Calgary, Alberta and at 1345 Burrard Street in Vancouver, present headquarters of Canawest. Both the television station and film company are divisions of Wometco Enterprises.

IS THIS NOW YOU CHOOSE YOUR LAB?

If you do, you are gambling on quality. Why not cut down the odds by choosing the Geo. W. Colburn Laboratory. With our white glove treatment you'll be a winner everytime.

## NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

### Stevens to Direct Advertising, SP for Technicolor's C & E Division

Thomas L. Stevens is now manager of advertising and sales promotion for the Commercial & Educational Division of the Technicolor Corporation. The appointment of this former marketing consultant for major films in the electronics and aerospace industries was confirmed last month by Robert Kreiman, vice-president and general manager of the Division.

In February, 1965, Stevens was named "Marketing Man of the Month" by the editors of Industrial Marketing. He won the award

Tom Stevens: marketing man

with a technique for using the electronic secretary with a three-minute, pre-recorded tape as a sales tool and for re-packaging a point-of-sales demonstration assembly.

The author of articles and booklets on marketing, Stevens is a graduate of UCLA with a BS degree in Business Administration and a major in marketing.

\* \* \*

### John Rogers to Direct Operations of Crescent Film Labs in Chicago

John G. Rogers has joined Crescent Film Laboratories, Inc., in Chicago, as vice-president, operations. His appointment was announced by G. Carleton Hunt, president of DeLuxe Laboratories, Inc., Crescent's parent firm.

The former vice-president in charge of special projects for Jayark Instruments Corp. assumed direction of Crescent operations on Sept. 1. A veteran of the U.S. Air Force with a 23-year career in that service, Rogers retired with the rank of Lt. Colonel in 1964. He was then Deputy for Training Materials in the Dept. of Defense where he produced training films for the Armed Services. Prior to

this appointment, Rogers was assigned to headquarters of the AF as Chief of Training and Instructional TV programs.

\* \* \*

### Harry Bjorkstrom to Super Production for Sun Dial in

The appointment of Harry Bjorkstrom as production supervisor and staff director in Sun Films, Inc.'s New York office has been confirmed by Carl V. sale, president. Bjorkstrom recently returned from Vieques, Puerto Rico, where he was assigned to a series of U.S. training films on *Amphibious Operations*, produced by Sun

 of Fraser Productions, San  
 Francisco, as production coordi-  
 nator. Miss Styman comes from  
 London, England, where she was  
 active in various production  
 organizations as J. Arthur  
 Rank, BBC-TV and Trans-  
 World Productions.

In addition to scheduling pro-  
 duction activities in San Francisco  
 and Hollywood, Miss Styman  
 will handle casting and pro-  
 motion of free-lance personnel  
 at the West Coast studio.

Dieter Vogel Joins Televideo  
 Dieter Vogel, director/cam-  
 eraman, has joined TeleVideo Pro-

ductions, Inc., New York City, in  
 that capacity. His work is widely  
 known.

**Hollywood Film Co. Appoints  
 James Wassell as General Manager**

☆ The new general manager of  
 the Hollywood Film Company is  
 James L. Wassell, former market-  
 ing director, professional equip-  
 ment division at Bell & Howell.  
 Harry Teitelbaum, vice-president  
 of the Hollywood-based firm, an-  
 nounced the appointment.

At B&H, Jim Wassell was re-  
 sponsible for the successful intro-  
 duction of that company's world-  
 famed Model C Additive Color  
 Printer. In 1963, together with  
 A. S. Pratt and H. C. Wolhrab,  
 he received an "Oscar" Class II,  
 Technical Achievement award  
 from the Academy of Motion Pic-  
 ture Arts & Sciences, for his con-  
 tribution to the Additive Color  
 Printer development.

Wassell is a Fellow of the SM-  
 PTE, a member of the Board of  
 Governors and the Financial and  
 Awards Committees of the So-  
 ciety. He is currently serving as  
 chairman of the Laboratory Prac-  
 tices Committee. He is also a mem-  
 ber of the Society of Motion Pic-  
 ture Arts & Sciences and the So-  
 ciety of Photographic Scientists

**J. W. Anderson Heads  
 Advertising at Wilding**

☆ J. W. Anderson, former-  
 ly associated with  
 S. C. Johnson & Son,  
 Inc. for the past nine  
 years, has been named  
 advertising and sales  
 promotion manager for  
 Wilding, Inc. His ap-  
 pointment was confirm-  
 ed last month by Rob-  
 ert C. Ausbeck, pres-  
 ident of the national  
 communications firm.

While at Johnson's,  
 Anderson held posts in  
 field sales, sales pro-  
 motion and at the Gol-  
 den Rondelle theater at  
 the New York World's  
 Fair. He received his  
 degree in accounting  
 from the University of  
 Maryland and did grad-  
 uate work in that subject.

The new Wilding ad-  
 vertising and sales promotion  
 manager is a native of  
 Baltimore. He now re-  
 sides in Evanston, Ill.  
 His appointment serves  
 the expanded programs  
 announced recently.

## New Universal Matte Box Serves Arriflex 16S and 16M Cameras

A new Universal Matte Box for Arriflex 16S and 16M cameras offers new, special capabilities. The Arriflex Corp. of America announcement notes that the new Box brings added utility, convenience and economies to the most popularly-used Arri zoom lenses,

Arri; with Universal Matte Box

including the 12-120mm Angenieux, the 9.5-95mm Angenieux and the new Zeiss 12.5, 75mm Sonnar.

Lens accommodation of this new Universal Matte Box also includes many long focal length lenses and all the regular Arriflex short focal length lenses. A two-section support beam is part of the design. The Box accommodates a wide range of commercially available filters.

A data sheet with full details is available from the company's franchised dealers or write: Arriflex Corp. of America, 25-20 Brooklyn-Queens Expressway West, Woodside, N. Y. 11377. Matte Box, complete with 2 Universal Filter Holders, is priced at \$168. •

## Strong "Mighty-Mite" Xenon Arc Lamp Useable on 16 mm Projector

A powerful new Xenon arc projection lamp, designed for use with all 16mm projectors presently using carbon arcs (and some equipped with incandescent light source) has been developed by the Strong Electric Corp., Toledo, Ohio. The new "Mighty Mite" is easy to mount and maintains steady color uniformity and high light intensity.

The lamp, a quartz envelope containing two tungsten electrodes in a pressurized Xenon gas atmosphere, produces pure daylight

## Random Access Selection of 81 Slides on Kodak Carousel RA-950

A random access slide system incorporated in a Kodak Carousel projector was unveiled by the Eastman Kodak Company in July (available in September). The new Kodak Carousel RA-950 provides remote random access to any of 81 slide positions in three seconds.

The projector's remote control panel has motorized focus control, single-slide operation forward and reverse and on-and-off. Both the

Carousel RA-950 with slide selector slide tray on the projector and the indicator dial on the remote unit are numbered in the same sequence and move in unison. Indicator lights show which slide is being projected or warn against a wrong slide being displayed. Unit weighs only 15 lbs. •

## Cine-Kodak K-100 Turret Camera Again Available from A-V Dealers

The Cine-Kodak K-100 Turret Camera is again available and is being sold through Eastman Kodak Educational Markets dealers. The K-100 camera offers simple film loading, interchangeable telescopic finders, a long-running motor, three-way exposure lever, full-speed range and wide selection of lenses.

The highly-portable six-pound camera operates in a wide variety of temperature extremes because of its use of nylon gears. Priced at less than \$530 with 25mm f 1.9 lens and 25mm viewfinder. Write: Motion Picture & Education Markets Division at Eastman Kodak, Rochester, N. Y. 14650 for full literature or ask our Products Desk. •

## Graflex Announces a 16mm Arc Projection System for Big Show

A new Graflex Arc Light 16mm sound projector, which is said to produce four times the image brilliance as conventional units, has been announced by Graflex, Inc. Housed in a carrying case with built-in sound system, speakers, controls, projection optics and arc lamp housing, the Graflex arc projection system uses a special direct current power supply contained in a separate portable package designed to serve as a "piggy-back" plat-

Graflex Arc "16" with power supply case used as a projector platform.

form on which the projector is mounted.

The arc projection system incorporates key features of the Graflex 16, 900 series of projectors, including transistor amplifier, hi-fi sound (twin 5" oval permanent magnet speakers), fumble-free film loading and automatic soundhead loading, push-button coded controls and adjustable film gate for even pressure on any type of film.

The Graflex Arc 16 uses the new GE Mare-300, 300-watt quartz arc lamp and power supply unit. Projection unit weighs 37 lbs.; power supply weighs 26 lbs. Write Graflex, Inc., 3750 Monroe Ave., Rochester, N.Y. 14603. •

ColorTran's LQBS "Soft-Lite"

## New ColorTran "Soft-Lite" Color Shadowless Lighting for Studio

A new Model LOBS-20 is said to produce virtually shadowless illumination for fill, key, general lighting, has joined ColorTran "Soft-Lite" series.

The new shadowless light is designed to replace the large conventional cone type, used to provide soft overall fill and base lighting in motion picture photography. For still applications, it eliminates the need for ring lights and replaces "skylight" for portrait and fashion photography.

A new reflector design directs rays so that light from every part of the reflector is of the same intensity; this reflected light virtually eliminates shadows. Model LOBS-20 uses two quartz lamps operating at 120 or 240 volts, AC or DC. The light is long, 15" high and only 4 inches deep. It is supplied with a 15-foot cord and 20 amp. lock connector. Weight is 44 lbs. For complete technical data write Berkey Technical Corp., Chestnut St., Burbank, Calif. or our New Products Desk will forward your inquiry.

## Versatile Special-Effects Slide Projectors Offered by NPS

Both standard and custom made special effects and other projectors, screens and accessories are now available from National Projection System Corp. Included in this firm's line is a standard high-intensity projector which utilizes a 3,000 to 6,000-watt quartz iodine light source with a cooling system which has a very low temperature level. It is capable of handling magazine loads as well as individual slides in 3 1/4 to 4-inch or 4 x 5 sizes.

The company offers both standard head units, weighing only 15 pounds and dual head units which provide for fade and dissolve requirements. There are dimmer controls and both wire and wireless remote control are other features. The NPS screen line includes... (CONTINUED ON PAGE 15)

## Mastereel: a New Film Handling System

REEL flanges and split reels: the first components of a new film handling system now available from Mastereel Industries, Inc., White Plains, N. Y. The system, first introduced to the motion picture industry in March, 1965 Technical Director of the Society of Motion Picture and Television Engineers said to slash costs by labor, time, weight and space.

The flanges and split reels, in 16mm and 35mm, in popular "length" sizes, are immediately available, according to Mastereel president, Robert M. Gross explained. He also mentioned other items and sizes of

... hunting for "mating half" Mastereel! To make a Mastereel reel, simply press together two flanges of the film size; with or without film on or off spindles of any size or rewinds. The 16mm flange is available in gold; 35mm in silver, or any to find right size.

Mastereel's equipment are in stock and will be available in the future.

Patented, the Mastereel is designed to handle film any way it comes; on reels, on negative cores, on overjust tightwound on inexpensive plastic film cores, on hardboard sleeves, can substitute for reels, according to M. Gross, giving great ease in storage and shipping. The flanges are identical and will engage with any other reel flange of the same film for a split reel with the

same capabilities as the flange — handling film any way it comes. All flanges and reels have strong heat-tempered aluminum disks, .090 inches in thickness, 1 1/4 inches in diameter, and are anodized in silver for 35mm and in gold for 16mm to protect, color code, and enhance appearance.

### Compatible With Equipment

The flanges and split reels are said to be designed to withstand a lifetime of hard professional use and to be fully compatible with all present rewinding, projecting, editing and viewing equipment now being manufactured for professional, industrial, educational and amateur use.

Mr. Gross said that exhaustive laboratory tests have subjected the reels and flanges to 100,000 coupling cycles and as many plastic core engaging cycles with no breakdowns and with no appreciable wear.

### Time-Saving Factor Cited

"We believe that the use of the split reels will eliminate at least 50 per cent of film winding required by current film handling practices," Mr. Gross said, "and when the new Mastereel multi-purpose plastic film case is made available, its use will result in further important economies, particularly during storage or shipping of film."

**HOW GOOD IS OUR IMAGE?**  
(CONTINUED FROM THE PRECEDING PAGE 60)  
means getting it *understood* so someone can take desired action. Along with "real-time" communication, we must generate the power of "real-time" understanding.

How? Well, let's explore a communication system that we really know something about.

The primary instrument of communication has always been, and always will be, man himself. Man is the communicator—not the telephone, the radio, the TV, or the TWX. They are only the "means". Man must provide the *meaning*.

**Man: a Model Communication System**

Let's focus on man as a communicating instrument.

What communication systems does he represent? The circulatory system is well-conceived, well-designed, and efficiently engineered. Every living cell has to get the "message" all of the time or it dies. Some areas have priorities. They are more vital to the life of the total body. All are tied into the network according to their specific function. We know what a blood clot can do to the efficient operation of the organism. We know how to make transfusions in an emergency. We know about anemia.

Perhaps the classic example is the human nervous system. We are so "sophisticated" these days that we consider the human brain to be a rather inferior type of computer. But, we are not giving thought to the quality of brains that created the computers.

The nervous system is compatible with the body's other systems, simultaneously supporting them, activating them, and keeping them informed with the proper "messages." When this system gets out of alignment, we may experience St. Vitus dance. If the circuits are given a high-potential overload, we suffer stroke.

**When Our "Communications" Break Down**

If there is too much distortion, or lack of alignment, in the linkage between the various stages of our personalities, creating a breakdown in intra-system communication, we consider the total body instrumentation as "insane."

How do we regain our sanity if we are mentally ill? We reestablish our identity and true sense of values by reestablishing our communication with our inner and outer environments.

We have done pretty well with the development of a variety of communication media and we know more about **WHAT** needs to be said, **HOW** best to say it, **WHY** it should be said, and to **WHOM**. It is exceedingly important to be able to define the audience's individual and composite needs.

**Man, Not the Machine, a Communicator**

Just before the final fade out, I would like to dolly in and focus on what I consider the most important of the principles we have tried to identify. That **MAN** is the communicator—not the *machine*. The machines are only the means, man must give meaning to the message.

We shouldn't build excellent modern facilities, with expensive equipment, and no one

who knows how to write a message. It's being all dressed up and no place to go.

Put the human being back where he belongs—on top of the system. The system only if he knows how to use it. Don't let the instrumentation confuse you. It can't reprogram your brain. It has to be programmed.

Individual human knowledge is the power of technology.

Those instruments didn't produce selves—men did. Men like Tesla, Marconi, de Forrest, and Van Neuman designed and developed them. Do not surrender to your instruments. Use them. They are the servants you are the boss! Don't capitulate—communicate!

*How good is our image?*

**Briefs About Industry Film Production**

☆ Donn F. Bates, director-producer of Douglas Aircraft, recently returned from a filming assignment which took him to the Canary Islands.

☆ Everett Kelley, at Lockheed-California, notes that lensman Bob Ganon is returning to Burbank after nearly four months of extensive shooting and editing in Munich, Germany.

☆ Lockheed is nearing completion of a relations film for the Navy; it will show Navy's complex ASW operations in the Pacific.

☆ Mel Shaw, of TRW Systems' Film Section, Department, has written and directed a general interest film on the historic Pioneer program, titled *Window Onto Space*. It was filmed under supervision of Harry Poppo.

## THE PROFESSIONAL VIEWPOINT

(CONTINUED FROM THE PRECEDING PAGE) portance of your company's products and don't know at least generally whether the profit is small, medium, or large, you may find yourself in the unenviable position of working out a motion picture plan or some other audio-visual scheme which just isn't "in the wood" when it comes to what the company can expect to realize from the sale of this product.

The records of small business failures are dotted with many instances of over-emphasis and over-spending on the wrong product. Not that the product itself was not useful, but the means used to promote it were out of scale with the realities. In a large company it is often easy to assume that a big organization "can afford" to lose on one product or another. But it doesn't take too many duds before some wholesale changes are made and if you have been indulging in the promotion of those products or services which aren't carrying their share, you are vulnerable.

Were we to express it in musical terms, we would say an audio-visual "pro" should, like any other employee, be "in tune" with his company. Not only should he know enough to play in time and not beat the drums when the strings are indicated, but he should know the tunes his company likes played.

In summary, knowing your company in the broadest and in the most intimate sense can raise your stature as an audio-visual "pro." If you can demonstrate your understanding of company aims, policy, means and methods, you can not only enjoy the respect of your management but you will find you can get lots more done — which is helpful, worthwhile, and effective.

### "If An Elephant Answers" — Hang Up!

☆ *If An Elephant Answers*, a useful new film designed to demonstrate for business extension users how to use their telephones more effectively, is now available through local Bell System offices.

It shows, in an entertaining way, how business telephone users can receive full benefits from their communications facilities. A phone call to an executive's office, poorly handled by a secretary, sets off a series of frustrating and amusing incidents. Incidents that could have been avoided had the call been handled properly. An animated baby elephant, visible only to the audience, plays a "starring" role.

Items featured in the picture include: answer promptly; identify yourself to the caller; create a good image through personality; courtesy and helpfulness; handle message accurately; make and take your own calls; dial accurately; establish your own communications island; stay on the line when placing a call and leave your phone in capable hands for proper extension coverage.

*If An Elephant Answers* is 26-minutes in running time, in color. It was produced for American Telephone & Telegraph Co. by Jerry Fairbanks Productions and is a 1966 Golden Eagle Award film now being shown at film festivals abroad.

*A Name  
with a Purpose*

★

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

### Concord Introduces the VTR-600, Moderate-Priced Video Recorder

A solid-state, push-button controlled, helical-scan video tape recorder, the Concord VTR-600, has been introduced by Concord Electronics Corp. to "meet the need for a moderately-priced, high-quality recorder for educational, commercial and industrial use."

The VTR-600 uses a helical-scan recording system with dual rotating heads and half-inch tape at a speed of 12-inches-per-second. Weight of recorder is 52 lbs. With an optional 12-volt inverter, it is said to perform excellently in helicopters and other moving vehicles. Push-button operated transport

system makes it possible for laymen to use the simplified mechanism without technical assistance. Provisions for still-frame monitoring and for audio dubbing permit users to add narrative explanation to pre-recorded visuals. Features also include push-button cleaning of recording and playback heads. Audio signals may be set visually, through the system's monitor.

Concord's MR-600 monitor-receiver is a separate, solid-state unit with a nine-inch picture tube.

Concord VTR-600 and accessories.

The Concord MTC-12 television camera completes the system. The VTR-600 recorder is priced at \$1150; the complete recording system, including recorder, television camera and monitor, are listed at \$1610.

Technical details on this video equipment are available from Concord Electronics Corp., Industrial Products Division, 1935 Armacost Ave., Los Angeles, Calif. 90025 or ask our New Products Desk to forward your request. •

### The "Executive Electrol" in Use New Da-Lite Executive Electrol Screen Only \$55 in 50 x 50" Size

An all-new, heavy-duty Executive Electrol projection screen which recesses completely into the ceiling and has its own automatic ceiling closure is available from audiovisual dealers of the Da-Lite Screen Company, Inc.

Hinged ceiling closure panel is only three inches wide and the length of the desired projection screen. It opens at the flick of a decorator-type switch, permitting the screen surface to lower in position and stop automatically. Flick of switch returns the screen to its enclosure. The Executive Electrol is available with screen surface sizes starting at 50 x 50-inches up to 12-foot square. Surfaces may be either Da-Lite's White Magic Chemi-Cote glass beaded or non-gloss mat white.

The 50 x 50-inch size retails for under \$55. Write our New Products Desk for a folder. •

## in Memoriam

**Rev. James Friedrich, Founder of Cathedral Films, a Heart Valued**  
★ The Rev. James K. Friedrich was an Episcopal priest for 35 years and the founder of Cathedral Films, one of the world's most prolific producers of religious motion pictures and filmstrips. He succumbed of a heart condition on July 12. He was 62 and was serving as a part-time assistant at Saints Church in Beverly Hills, California.

Rev. Friedrich made a tremendous contribution to the religious film field during the decade following his founding of Cathedral Films in 1938. During that time his company produced numerous religious instructional and feature films, all of them widely distributed in churches throughout the United States and abroad.

Recently, for example, 100 copies were sent to the Diocese of Los Angeles church in which he served under the Anglican Communion program of Mutual Respect and Interdependence (MR).

His work is his memorial. His participation in audiovisual industry affairs and events will soon be forgotten by many thousands of people who were inspired by the dedication and high quality of all that Cathedral Films presented to those who knew the importance of the mission he emphasized throughout his life. Feature films which he produced include *The Great Commandment*, *Day of Triumph* and *The Big Fisherman*.

Surviving Dr. Friedrich's widow, son and two daughters.

\* \* \*

### Peter A. Butzen, Pioneer Animator, Died in Los Angeles on June 21

★ An old friend and early animator whose skill helped advance the art of the animated film in Los Angeles on June 21, 1963. Butzen, well-known to Catholics in the film industry during his career in that city, was in his home town on June 21.

His widow, Helen Butzen, lives.

### Advanced Film Reproductions Specializes in 8mm Film

## Can your PR film make the "bigtime"?

If it's professionally produced, with an appealing subject matter (sports, travel, entertainment, public service or documentary) and no offensive commercial message, there's a good chance it can be booked into top theatres.

Chances are even better when it's merchandised and distributed by Modern's Theatre Division to specific market areas of your choice.

With only one 35mm print of your film we can get you 50,000 viewers in one year. With more prints, say 100 or so, we can get you up to 7,000,000 a year through our 30 Film Exchanges.

We'd like to give you a professional appraisal of your film's chances, based on more than 30 years of creative film merchandising. Just send us a 16mm or 35mm print (even a script will do). If you're interested, we'll also review it for bookings in educational and community groups, summer resorts, airport theatres and television.

Dick Rogers, Vice-President of our Theatre Division, (or your local Modern account executive) will give it his personal attention if you contact him at Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N.Y. 10036

# "SELLING IS MENTAL"

18 Complete Sales Meetings

Ready to Use—

Stimulating—

Keys Men Up With  
New Enthusiasm—

Motivates Them to  
Greater Sales Efforts

"SELLING IS MENTAL" with all the advantages of audio visual to communicate knowledge and understanding, will add zest to your meetings, start them off on the right foot.

The men will gain greater confidence in their own capacity to achieve greater sales goals, by learning for example:

How "To Sell the End Result First"

How "Closing the Sale" can be quite simple...and other equally important techniques.

**Easy to Administer...** because everything has been done for you. The 18 meetings are programmed in detail in the "Leaders Manual" to guide you easily through each lesson perfectly...with what to say, what to do and...when.

**6 Color Sound Filmstrips...** to demonstrate how the basic techniques of selling are applied, so that men will see for themselves how to achieve greater sales success.

You can "judge" program before you buy

You needn't take our word about the benefits of "Selling is Mental." Our preview offer permits you to "see" and "judge" for yourself. A small handling charge, credited to the purchase price, allows you to have the complete program for any 5 day examination period you choose.

Byron is the only  
 one in the world who  
 can make Color Correct<sup>®</sup>  
 prints. Color Correct<sup>®</sup> means  
 the finest quality in color motion  
 pictures, and only Byron has the right  
 to use the term — Color Correct<sup>®</sup>.  
 (U.S. Patent Office, Trademark No. 575058)

At Byron, every step is controlled by skilled men and  
 machines. And since no color process is any better than  
 its control, it's no wonder that film producers  
 all over the world turn to Byron — for the  
 finest in 16 MM Color Correct<sup>®</sup> prints.

MOTION PICTURES

## right off the newsreel

**Annual CINE Awards Program** in Washington, D. C., on Nov. 18th. Ninety-one awards and honor certificates given U. S. actual motion pictures which were entered in more than 40 international film festivals within the first nine months of 1966 will be presented to their producers and sponsors in Washington, D. C., on Friday, November 18, when the Council on International Nontheatrical Events holds its annual CINE Awards Program and Exhibition of Films of Merit.

The total number of trophies, medals and honor certificates may be even larger by that date, with 10 more festival events still being held. Last year, CINE entries won only 72 such awards within a similar period.

The 1966 prizes have been won at Cannes, Buenos Aires, Venice (Art, Documentary, Children's, Golden Mercury and 7th International Industrial Film Festival), Melbourne, La Plata, Cordoba, Edinburgh, Rome Electronic, ANZAAS Scientific and at Cra-

cow. In addition, 125 short subject, television documentary and industrial-sponsored motion pictures will receive CINE's Golden Eagle certificate.

These Golden Eagle Certificates will be presented at Friday afternoon ceremonies (2:30 p.m.) in Crabtree Auditorium of the National Education Association headquarters building. The annual CINE dinner, with president Alden Livingston presiding, will be followed by an evening film exhibition and the formal presentation of major international awards in Crabtree Auditorium.

The Exhibition of Films of Merit has been expanded to an all-day screening program, utilizing the nearby theater of the National Geographic Society and the NEA Auditorium so that film makers, government officials and guests may see the best pictures of the year.

Reid H. Ray, president of Ray Film Industries, is chairman of the 1966 CINE Awards Exhibition; Frank Rollins, Squibb & Company, is chairman of the banquet and reception events. Dr. Randall Whaley will announce the international certificate awards, aided by representatives of foreign

embassies whose countries are represented.

### Honor Safety Films Plaque Winner at the National Safety Congress

Winners of bronze plaques given the outstanding safety films of 1965 by the National Committee on Films for Safety received these honors during the recent National Safety Congress in Chicago on Monday evening, October 24.

Following screenings of top award-winning pictures before a general assembly of Congress guests in the grand ballroom of the Conrad Hilton Hotel, James T. Wadkins, managing director of the Richmond (Va.) Safety Council and chairman of the National Committee on Films for Safety presented plaques to 10 winning sponsors and producers.

This year's first award winners were: *Family Tree*, a U. S. Forestry Service t.v. spot; *The Choker-man*, Northwest Forest Industry Film Committee entry; *Everything to Lose*, submitted by the Caterpillar Tractor Co.; *The Return of Milton Whitty*, sponsored by the Construction Safety Association of Ontario, Canada; *The High Cost of Negligence*, a Department of the Army (U.S.) training film; *Safety*

*in the Home*, produced by Encyclopaedia Britannica Film for classroom sale; *The Tolerant Hours of Hazard*, an Aetna Casualty Company production; *Love That Car*, produced by Parthenon Pictures for the American Oil Company; *Winter Trucking*, sponsored by the U. S. Dept. of Public Roads; and the Shell Company's televised film program: *The National Driver's*

### Entry Forms Ready in November for 1967 American Film Festival

☆ The 1967 American Film Festival, sponsored by the Educational Film Library Association, will be held May 10-13 at the Hilton Hotel in New York City. Competition categories include 16mm films and 35mm film on Art and Culture; Business Industry and Public Relations; Education and Information; Health Safety and Medicine; and Religion and Ethics.

Subjects in these categories released for general distribution in the U.S. during 1966 are eligible for entry. The entry deadline is next January 27 and entry forms will be available in November. EFLA, 250 West 57th St., New York, N. Y. 10019.

# NILES AND THE FEATURE FILM

**NASHVILLE REBEL**—Soon to be released, this Niles' feature is the first ever based entirely on the Nashville Sound . . . country and western music. Among its stars are Tex Ritter, Faron Young, Sonny James and Porter Wagoner. This 90-minute wide screen color film was shot almost entirely on location—in both Nashville and Chicago. The film was directed by Jay Sheridan.

**MICKEY ONE**—In 1964, sound stage one at Niles' Chicago studios took on all the flavor of a large night club. The reason: filming of the drama, "Mickey One," which premiered in Chicago last year. It starred Warren Beatty, Hurd Hatfield, Alexandra Stewart and Franchot Tone. The film was directed by Arthur Penn. All interior scenes were filmed at the Niles' studios, using Niles' crews.

**THE KEY MEN**—Plans for several additional feature films are already in the works at Niles' studios. Here, the men behind these plans work out the details of upcoming productions. They are (from left) Ira Kerns, Tom Wainwright, Fred Niles, William Harder and Jay Sheridan.

## SCREEN EXECUTIVE

### Sid Solow Elected President of Cinema Laboratories Association

☆ Sidney P. Solow, president of Consolidated Film Industries, Hollywood, has been elected president of the Association of Cinema Laboratories.

Announcement of the election of Solow, a 30-year veteran in the motion picture laboratory industry, was made during the ACE's recent meeting in Los Angeles. Headquarters of the association are in Washington, D. C.

\* \* \*

### Elect James Limbacher President of Educational Film Library Assn.

☆ Members of the Educational Film Library Association have elected James L. Limbacher, audio-visual librarian of the Dearborn (Mich.) Public Library as their new president. Other new officers-elect are: William J. Speed, vice-president and Carolyn Guss, secretary. Speed is a-v director of the Los Angeles Public Library; Miss Guss is a professor of education at Indiana University. The association has a membership of over 1,000, mostly in educational and public library posts in the U.S.

### Hal Arden to MPO Productions as Head of an Educational Program

Hal Mare Arden has been appointed a vice-president of MPO Productions, New York. He will supervise the development of the company's program to utilize its film-making talents and facilities

teaching film-maker: Arden

in meeting the increasingly complex needs of education.

One of Arden's first projects will be the development of a series of instructional films for architectural students. This program is being prepared in collaboration with the Association of Collegiate Schools of Architecture and the Institute for Educational Development. The films will be distributed

to schools of architecture throughout the world.

Prior to his new appointment, Arden was Associate Producer and Director of Public Relations at Sturgis-Grant Productions, Inc. He also served for eleven years as National Radio-TV-Film Director of the American Heart Association.

MPO plans for the educational field include the creation and production of instructional films for schools and libraries, as well as for medical and science professional groups in the U.S. and abroad. •

THE RUGGED, RELIABLE and VERSATILE

# ARRIFLEX® 16M

The Arriflex 16M isn't the only motion picture camera that boasts a fast-change magazine system. But the 16M's magazine system is the professional one that combines speed with reliability. The sure reliability of the 16M is provided by the design of the film gate. Parts of the film gate in the magazine? **JAMAIS! NIEMALS! NEVER!** Why? Because the whole film gate—every single part of it—is in the camera body where it locates film, precisely in the focal plane, safely and surely. That's why, on the toughest jobs, you can depend on the rugged Arriflex 16M to deliver theatre-quality footage from start to finish.

And the heavy-duty Arriflex 16M can "deliver" on any assignment—tough, long run jobs, hand-held grab shots or anything in between. Just select the film load and magazine that's right for the job—giant 1200', basic 400' or bantam 200'. The three Quick-Change magazines are all gear-driven and have built-in sprocket and preformed loop systems that makes magazine change fast, sure—precise.

So, if you have some really tough jobs coming up, let the Arriflex 16M see you through in true Arri fashion. It's got what it takes: Gear-driven Quick-Change magazines, 60 cycle generator, automatic clapsticks, famed Arri mirror-shutter reflex system, Arri registration-pin movement—and a host of other professional features. Get the complete story.

Write for **ARRIFLEX 16M** 4 page brochure

## "QUICK-CHANGE" MAGAZINES

Compact and lightweight in design, the 200 ft. and 400 ft. magazines are of the single compartment, displacement type and accept darkroom loads on plastic cores. Both magazines also accept 100 ft. and 200 ft. daylight spools, respectively. The 200 ft. and 400 ft. magazines are factory equipped for forward and backward operation and automatically change their internal drive mechanism when the camera is reversed.

The completely loaded 1200 ft. magazine mounts on the camera as fast as the smaller capacity magazines. It is standardized for forward filming only but can be equipped for reverse running on special request at extra charge.

## SMPTE Observes Its Golden Anniversary

Look to Future and Past at 100th Technical Conference

**F**IFTY GOLDEN YEARS of free exchange of technical knowledge between members of the Society of Motion Picture and Television Engineers covering a broad range of scientific and technical progress in the arts and science of communication were observed October 2-7, 1966, as 1,200 members of the Society gathered at the Ambassador Hotel in Los Angeles for their 100th Technical Conference. Meetings are held on a semi-annual basis.

The 1966 Progress Medal of SMPTE was awarded to Dr. Wesley T. Hanson, assistant director of Kodak Research Laboratories, in recognition of his work on the concept of color couplers, chemicals incorporated in film to produce colored dyes in the final image. Dr. Hanson's work has led to new types of couplers resulting in significant improvements in the quality of color positives for motion picture and television use.

### Look to Photography's Future

Technical papers presented at the Conference looked to the future as much as the past. There were details about pictures that can now be taken at the rate of 15 million frames per second; flash bulbs with a flare speed in the billionth of a second. Members heard about the potential use of laser beams for large screen theater and home television application and of a new space camera for unmanned space flight. Standards to improve color television transmission and reception without switching and tuning were discussed.

"It's difficult for the layman to realize the fantastic development in photography since the first crude images," said SMPTE president Ethan Stille. "For instance, the aerial photograph today captures 100 times as much information on a negative as was possible at the end of World War II. And the achievement in photography of Surveyor I with its pictures of the Moon exceed that by far."

### ASC Film: a Picture of Progress

The historic past was observed on this 50th Anniversary program by such events as an American Society of Cinematographers' film review of advances in photography, research, engineering and production as they contributed to the art of motion pictures. The hour and a half-long film includes scenes from the early films of Edison and

Edwin Porter, continuing to the first sound and talking color up to today's wide-stereo sound 70mm film. "special" included both recent examples of process photography, special effects, shots and traveling bocquences.

The keynote of the Anniversary Conference was sounded at a luncheon at which L. A. Wynd of Eastman Kodak talked on "A Thousand and One Nightmares."

\* \* \*

### Industrial Audio-Visual Exchange Hold Fall Meeting at Tapoco

The annual fall meeting of the Industrial Audio-Visual Exchange, held October 3-6 at Tapoco Lodge in North Carolina, was highlighted by the appearance of Dr. James Lieberman, director of the U. S. Public Service Audio-Visual Facility in Atlanta, Ga. Dr. Lieberman spoke on "A-V: Solution to a Crisis" which he discussed the vital role of audio-visuals in meeting health problems.

Other guest speakers on the program arranged by the Southern members of IAVA were E. T. Egger, professor of chemistry at Georgia State College in Atlanta; and Dr. Cabot Jaffe, university of Tennessee educator, who spoke on the "Empirical Applications of Audio-Visuals."

Co-chairmen of the fall meeting were Martin Broadwell, SBC Bell Telephone Co. and L. Morton, Alcoa. Member guests at Tapoco Lodge welcomed by Lawrence B. W. Link-Belt Company, president of the association.

THE EDITORIAL VIEWPOINT

LOWERING EACH MEDIA FILM BARRIERS

**T**HE LONG AWAITED "Barrat Agreement" which provides for the duty free importation of educational, scientific and cultural motion pictures, recordings, filmstrips, slides, maps, charts, posters and models, as well as recorded videotapes, is expected to affect the worldwide exchange of such media early in 1967. On September 22, 1966, the U. S. Senate passed without objection and sent to the President for signature House Joint Resolution 688, which implements this "Agreement for Facilitating the International Circulation of Visual and Auditory Materials of an Educational, Scientific Character", as this document is formally known.

President Johnson signed House Resolution 688 in mid October, affirming U. S. approval.

Signatories to the Agreement already include Brazil, Cambodia, Denmark, El Salvador, Ghana, Greece, Haiti, Iran, Iraq, The Malagasy Republic, Norway, Pakistan, The Philippines, Syria, Trinidad and Tobago and Yugoslavia. Other countries are expected to recognize its terms.

The U. S. Information Agency has for some

*Janison Handy, founder and president of The Jan Handy Organization (right), presents a gold watch to James Wiseman, in recognition of Mr. Wiseman's 25th anniversary in that company. He is supervisor of the slide film stages. Five other new members of the JHO "25 Year Club" were also honored with watches. They were: Charles Bell, of the business theater department; Hal Jewell, customer contact and service; Mrs. Vivian Manley, accounting; Scott Mitchell, head of projection services; and Al Robbling, of the creative writing staff.*

years conducted an informal certification program in the spirit of the Agreement. USIA certificates are recognized or are "found helpful" in making local customs determinations abroad for advantageous treatment of materials

covered by them in approximately 30 countries.

A number of other countries having favored nation or similar trade arrangements with the United States, would also be expected to recognize United States certificates, ratification of the Agreement. The Agreement does not apply to materials intended for advertising of products, processes, services although some incidental advertising do necessarily render material ineligible for certification.

Formalities required before the United States can become a full party to Agreement including deposit by the State Department of an instrument of acceptance and modification of U. S. tariff regulations, should be completed by early next year. Additional information about the status of the Agreement present certification program can be obtained by writing to the: Attestation Officer, International Communications Media Staff, U. S. Information Agency, 1776 Pennsylvania Avenue, Washington, D. C. 20547.

*This Issue Brings You an Exclusive Report on the Industrial Film Festival in Venice*

U. S. film makers and sponsors can learn from those "judgments at Venice" which we report from our first-hand experience as a member of the Official Jury and accredited U. S. delegate to the 7th International Industrial Film Festival held on September 12-18 at the Palazzo Cinema on the Lido. That report begins on this page. (CONTINUED ON THE FOLLOWING PAGE)

## THE EDITORIAL VIEWPOINT

(CONTINUED FROM THE PRECEDING PAGE 12)  
page 35 of this "world in focus" feature of BUSINESS SCREEN.

The United States was a fortunate recipient of a second-place award for *Steel and America* at Venice. Films of Great Britain won that country the Festival's Grand Prix, with German entries coming very near that honor. In what way did our 15 U.S. entries fail to achieve higher places? A most significant factor was the submission of 16mm prints for 13 American entries and these inevitably suffered by comparison when they were almost invariably preceded and followed by superb 35 mm color presentations.

Not a single 16mm entry of any country received one of the Festival prizes.

This does not alter the fact that first prize winners in each of the seven Festival categories were highly deserving of their honors. The Pirelli entry, *The Tortoise and the Hare*, was superbly entertaining and the equal of a short theatrical feature subject, both in casting and cinematography. The U.S. had high hopes that *To Be Alive!*, one of the most widely-appreciated sponsored motion pictures of the past two years (and winner of our own Academy Award as the best short subject of 1965), would triumph for Johnson's Wax and its producer, Francis Thompson.

But *To Be Alive!*, although applauded vigorously by a well-filled auditorium at the Palazzo when it made its 70mm single-print debut at Venice, was deemed by its jury to be ineligible because of its 1964 production date. It was also a source of amazement to members of that jury that such a non-commercial motion picture should be sponsored by any industrial company. Europe has much to learn in that respect!

The 35mm color print of *Steel and America*, fortified by Walt Disney's artistry and the brilliant Donald Duck as its principal character, lost out only to *The Tortoise*. Another great first-place winner: *Two Cubic Centimeters for Life*, sponsored by a German drug industry group and produced with consummate skill by Leonaris Film of Boebligen (Stuttgart), Germany, is perhaps the finest cinematic treat-

## The operation was a success...but the patient died

You, too, can lose "patients" through some small detail . . . such as titles not up to the standard of the rest of your production. . . Guard against loss of clients by protecting your large investment in time and money by a very small investment in Knight titles.

**SOME OF OUR FILMSTRIP CUSTOMERS** bring in grocery cartons full of everything from cornflakes to handlettered signs. At CFI we make great filmstrips from the darndest material. Backed by special equipment, our experts specialize in converting all kinds of copy into filmstrips. *Different sizes of art? We shoot flat copy up to 24" x 32" (32 field). Products to shoot? We'll photograph them into your filmstrip against a colorful background. Need additional art? A skyline? Hand lettering? Type set on a cell overlay? We can do. Or if you have an assortment of transparencies, we copy from 35 mm through 8 x 10 direct with no intermediate reduction step to cause loss of color or detail. Quality? We give you faithful color rendition with minimum contrast gain and frame to frame color correction to insure over-all balance. And our unique continuous loop printing equipment assures you absolutely uniform filmstrip prints from scratch free negatives. How long? Our normal delivery is one week. On super-rush jobs we'll work with you to meet a tighter deadline. Need advice? We'll answer your questions on the phone. Call Tom Livingston at HO 2-0881.*

*Your filmstrip benefits from the superior facilities and technology that have been developed to meet the high standards of the motion picture industry.*

## Film Debut of the 1967 Oldsmobile

Feature-Length, Wide-Screen Film Introduces New Models to Dealers

Oldsmobile's 1967 model introduction show for dealers was on film again this year for the second year in a row. The GM division has many years traveled an elaborate live presentation but last year switched to a feature-length color motion picture — with success that film was chosen again.

This year's show, presented to dealers at dealers all over the country in early September is a one-hour 35mm wide-screen Eastmancolor film titled *The Spy Who Came in for the Olds*. MPO Productions produced it for D. M. Brother & Co., Olds' advertising agency. N

Film again got the nod for the introduction of the 1967 Oldsmobile models as this GM division brought its dealers a one-hour wide-screen motion picture in which this scene was featured.

Samuel Vin Rothenberg was director and Gus Eisenmann, producer. Ray Martin was composer and conductor-arranger for the score.

The film is based on the idea that there is a "spy" loose in Oldsmobile land who is trying to discover what the new 1967 Oldsmobile models look like. The action takes place in a dealership showroom, and at Cypress Gardens, where the new models are unveiled amidst the beautiful settings of the Florida tourist attraction, with plenty of pretty girls galore and water skiers whooping it up for the new Toronado-inspired cars.

Dealers at the model introduction luncheon and show at the Americana Hotel in New York, on September 13, got a big kick out of it.

# 16mm movies have just seen the light of day

introducing a revolutionary new projector that rivals the sun...

# The Graflex 16mm Arc Light Projector

Now you can  
flood your screen  
with whites so pure,  
colors so true, even  
the sun can't  
wash them out!

Set it up in any room with a problem. That impossible gymnasium where you can't get total darkness. That big auditorium or convention hall. Any place you've had to tolerate drab, washed-out motion picture images. And leave the lights on, if you wish. Or pull up the shades. Because our new Graflex 16 Portable Arc Light Projector does for your eyes what stereo does for your ears. It puts a brilliant new snap and sparkle into black and white movies. Gives them more contrast and clarity. And it erases the roofof film with a vividness Van Gogh would applaud. They're clear, crisp, brighter than ever before! Theater performance like this once

came only from monster machines.

But not any more. Except for its streamlined power pack platform, our new projector doesn't look much different or weigh more than any other Graflex 16 projector you may have seen or used.

Its secret is a new quartz arc lamp (the General Electric MARC-300<sup>®</sup>) that's shorter than a cigaret and just as thin.

Yet it produces up to *four times the brightness* of ordinary 1000 or 1200-watt lamps!

Skeptical? Write for a demonstration. A local representative will be glad to show you, without obligation, how our new Graflex 16 Portable Arc Light Projector can bring your movies out of the dark and into the light of day.

## SPECIFICATIONS

- **WEIGHT** Projector: 39 lbs. Power Pack: 26 lbs.
- **DIMENSIONS** Projector: 14" high, 11" wide, 20 $\frac{1}{4}$ " long. Power Pack: 47 $\frac{1}{8}$ " high, 11 $\frac{1}{4}$ " wide, 21" long.
- **MAXIMUM WATTAGE RATING** Projector less Lamp: 275W; Power Pack and Lamp: 400W.
- **ELECTRICAL REQUIREMENTS** Projector: 117 volts, 60 cycle A.C. Power Pack: 117 volts, 60 cycle A.C. Lamp: 37 volts D.C. at approx. 8 amps.
- **LAMP CHARACTERISTICS** Color Temperature: 5000 K. Rated Life: 25 hrs.; Screen Lumens: open shutter, 2000 min.; running shutter, 1000.
- **POWER PACK CHARACTERISTICS** Convection cooled, self-contained unit designed as base for projector; connects with short cord and plug. Powers both lamp and projector.
- **PROJECTOR CHARACTERISTICS** Self-contained in single case with amplifier and permanent magnet speaker. Single lever controls for sound silent speeds, soundhead loading and forward reverse operation. Push button controls for start, stop and lamp operation. Co-axial controls for volume and tone levels.

The payoff is in the picture

## FILMIS CORPORATION

THEORY HAS TERMED Benjamin Franklin  
 ce of the "wisest Americans" and this  
 tesian, philosopher, inventor, scientist, phi-  
 thropist, publisher, author and diplomat  
 n so be truly called "the first American  
 niu"

But Ben Franklin's principles, philosophy  
 d ceds will qualify him as a first-rate sales-  
 man and it is upon that basic premise a new  
 dfferent 30-minute sound motion pic-  
 e has been brought to the screen. *The Sell-  
 ing Secrets of Ben Franklin* joins the widely-  
 eful film library of the Dartnell Corporation  
 d being made available for sales group  
 ings on the customary outright print sales  
 isor may be rented as an outstanding new  
 tu' for a sales meeting. Like a predecessor  
 n the same genesis, this Franklin picture  
 s produced for Dartnell by The Jam Handy  
 eazation.

Franklin's Role Played By a Professional  
 The previewer is impressed, first of all, by  
 skillful casting of the lead player in the  
 e of Franklin. Thoroughly believable, he  
 the man. Other roles are equally well-cast  
 th historic pioneer in the realm of com-  
 n sense carries his wisdom into modern-day  
 tins when selling situations are dramatized  
 reinterpreted Franklin's maxims for today's  
 on and problems. These "real life" scen-  
 es translate into action just five guiding  
 e rules which are basic in all selling situ-  
 on. For instance:

Franklin's guiding rule: "Virtue is obtained  
 he by the use of the ears than by the  
 ge." In today's idiom, let that read: "Lis-  
 sk questions. Get the prospect to talk."  
 his second Guiding Rule, Ben Franklin  
 e that "Argument is productive of distas-  
 e, and enmities. Forbear direct contradic-  
 ion. And, today we would say: "A soft an-  
 er sells hard."

Principles Translated Into Modern Terms  
 Franklin's third Guiding Rule: "Think hon-  
 y and speak accordingly" can well read:  
 e sincere. And his fourth principle: "Lose  
 tie, but let each part of your business have  
 ppe" tells the salesman to "organize and  
 ppe, plan his work and plan his day."  
 There's final logic in that fifth maxim in  
 Franklin said, "Resolve to perform what

you ought — and to a purpose." For the sales-  
 man, let it read: "Take action to get decisions.  
 Ask for the order."

Are these so very elementary? Indeed they  
 are and that is their strength — because they  
 are so often overlooked. In this Dartnell film,  
 they are delivered sans preachment, table-  
 pounding and posturing. This filmed Franklin  
 and his fellow cast members work at deliber-  
 ate pace to emphasize logic and common sense.

#### Program Includes Useful Meeting Tools

Dartnell has fortified the program which in-  
 cludes *The Selling Secrets of Ben Franklin* with  
 a "take-home" piece containing scenes from the  
 film underlined by those five Guiding Rules.  
 Going farther, the company has prepared a  
 Meeting Leader's Guide for the proper intro-  
 duction of the film, containing a brief historic  
 background on Franklin's life and contribu-  
 tions, a statement of the film's purpose and  
 some very useful tips on presentation.

There's a "sixth principle" in this well-pre-  
 pared package worth noting by all who use

the film medium. Prepare the audience and  
 assure the professional quality of the presen-  
 tation. Then, follow-through with discussion  
 and review of its content to achieve a lasting  
 impression among all viewers. For advance  
 preparation, Dartnell has also provided an  
 announcement poster giving date, time and  
 place of the film showing and five attractively-  
 designed posters also provide the five "guid-  
 ing rules" contained in the film.

Finally, users of the film may acquire  
 pocket-size Reminder Cards and a souvenir  
 coin with an engraving of Ben Franklin on  
 one side and the five points on the other.

#### A Picture With International Values

Selling is the foundation-stone of every  
 free nation's economy. To that end, *The Sell-  
 ing Secrets of Ben Franklin* make an import-  
 ant contribution to the industrial productivity  
 of countries in which it can be widely used.

And since Ben Franklin is truly an *international figure*, the film should be as popular  
 abroad as it is in the land of his birth. •

Franklin's Guiding Principle: "Think honestly  
 and speak accordingly." Or, in today's words,  
 "be sincere in everything that you work at."

Franklin: "Lose no time - but let each part of  
 your business have its place." Organize and  
 prepare. Plan your work and plan for each day.

Franklin: "Virtue is obtained rather by the use of ears than by the tongue." Today's words: "Listen. Ask questions. Get prospect to talk."

## Ben Franklin Shares His "Selling Secrets"

The Guiding Inspiration Found in Franklin's Timeless Principles Is Interpreted for Today's Salesman in This New 30-Minute Sound Film Released by Dartnell

Not every house is as perfectly balanced as this landscaped residence, but good overall balance is the goal of every landscaping design . . .

## Guidance for Home Owners on Landscaping Techniques

WHAT IS IT THAT makes some homes seem to rest on their land more comfortably than others? Why does one house seem to belong to its surroundings while another appears to stand somewhat awkwardly? Often the whole difference can be summed up in one word . . . landscaping. And often the main problem with achieving good landscaping is just not knowing where to begin.

Yet knowing a few very basic facts about landscaping can mean the difference, for the average homeowner, not only between run-of-the-mill plainness and outstanding beauty in the grounds around his house, but also between spending his hard-earned money foolishly or investing it wisely in a job that will give him lasting beauty and increased property value.

Sponsored by Nurserymen's Association

To help the homeowner understand "where to begin", a motion picture on basic landscaping techniques, *New Guidelines For The Well-Landscaped Home*, has just been released by the American Association of Nurserymen. Based on the AAN's copyrighted booklet, "The Standard For Home Landscaping," it outlines in simple terms and with clear visuals the things one should know before undertaking any landscaping project.

It is essential, says the film, first of all, to have a plan . . . to establish the design and composition of your landscape. Next, the plants and related materials to be used in the landscaping must be chosen carefully for the roles they are to play. And finally, they must be installed properly, especially the plants, since they are living things and will thrive only when treated correctly. Each of these three steps is explained and elaborated so that the viewer will be able to apply them to his own particular situation.

Uses Both Live Action and Animation

The film, produced by Sun Dial Films, Inc. from a script by staff writer Tom Carroll, Jr., uses both live action and animation. Live action sequences show examples of successful landscapes, various uses for trees, shrubs and flowers, and ideas for incorporating related materials, such as stone, brick, fencing and outdoor furnishings, into the overall landscape design.

Animation, on the other hand, was used to

The film outlines three basic steps for landscaping: a basic plan; careful selection of plants, materials; and their proper installation.

illustrate many basic design concepts which required flexibility in the visuals. (Moving a tree from one spot in a yard to another, or moving the wing of a house from one to the other, for instance, proved to be accomplished more easily by animation!)

Variety of Examples Adds to Its Appeal

The film, which runs 13½ minutes in 16 color was shot at several locations in Westchester County and Long Island and attempts to emphasize variety in size, style and variety of well-landscaped homes, so that it will be informative and have an appeal for as wide an audience as possible.

Group showings of *New Guidelines for Well-Landscaped Home* can be arranged through local members of the sponsoring association. Some of these firms also have set up projection facilities within their own offices.

## 12 Receive "Chris" Statuettes at Columbus

USA's Pearson Is Guest Speaker at 14th Film Festival

COLUMBUS, Ohio, takes culture seriously and works hard at upholding its reputation as the "Athens of Middle America." Members of the Columbus Film Council and of the city's Chamber of Commerce, joined by audio-visual people from Ohio State University and a host of volunteers from the professions also labor long at their self-imposed screening duties that culminate in one of the country's few remaining civic-sponsored film festivals which don't include "entertainment" movies.

Columbus also looks beyond its boundaries to a wide world beyond and for its 14th Annual Film Festival Awards Banquet chose a guest speaker whose horizons span both world and film horizons. Wilbert H. Pearson, chief of the International Communications Media Staff, U. S. Information Agency, discussed a broad range of subjects relating to factual films in the world today at the well-attended dinner in the Fort Hayes Hotel.

**Winners of "Chris" Statuettes**

Those who came to hear Mr. Pearson were also rewarded with annual prize-giving ceremonies at the banquet. The highest honor of the Columbus Festival, the "Chris" statuette, went to 12 outstanding motion pictures in six subject categories. The sole winner of a statuette in the area of films for business and industry was Larry Madison Productions. The Madison film, *As Tall as the Mountains*, was produced for Adolph Coors.

There was also a single "Chris" statuette award in the field of "education-information" films. *Land of the Yeti*, entered by the Field Enterprises Educational Corp., was that winner.

**Honor Three Health Pictures**

Three motion pictures shared top honors for health and mental health films. *Better Odds for a Longer Life*, sponsored by the American Heart Association; *Handle With Care*, produced by John Sutherland Productions; and *Human Reproduction*, produced by Audio Productions for the Text-Film Division of McGraw-Hill, Inc., were the "Chris" winners.

*The Journey*, a U. S. Information Agency motion picture and *Echo*, a Marty Young Production, won "Chris" statuettes as outstanding religious films. Two motion pictures also received statuettes as the "best of Festival" travel films: *Spain and Portugal: on the Thresh-*

*old of Success*, a Centron Corp. production, and *Americans on Everest*, submitted by the National Geographic Society.

Honors in the category of "special fields" brought "Chris" statuettes to the National Film Board of Canada for the film *Moontrap*; to Vision Associates for their motion picture, *The Odds Against*; and to Wolper Productions for the televised sports motion picture, *Mayhem on a Sunday Afternoon*.

**157 Certificates Are Awarded**

With hundreds of entries submitted for selection, Festival juries were inclined to their usual generosity in honoring many films in their respective categories. A total of 157 Chris Certificates, including those titles which also received statuette awards, were presented at the banquet by Nils Lindquist.

Films from the field of business and industry earned nearly twice the number of "Chris" Certificates given other groups as 58 were presented. Galvy E. Gordon, executive vice-president of the Council, was chairman of this category.

In other groups, films on education and information subjects received 23 Chris Certificates; there were 25 winners in the field of health and mental health films. Ten certificates went to religious films and travel entries received 24 of these honorable mentions. The area of "special fields" brought 17 certificates to the "next best" pictures.

**They Headed the Film Juries**

Daniel F. Prugh, president of the Film Council of Greater Columbus, served as chairman of the travel film category this year. The education-information group was headed by Chairman Fredrick B. Saunier and Florence L. Fogle chaired the health-mental health film category. Dolores Sherwood, as chairman for the religious film entries and Sanford N. Hallock, chairman of the "special fields" group, completed the roster of Festival leaders.

Mary A. Rupe is secretary-treasurer of the Council and its director of public relations is F. H. "Bud" Gillis, Jr.

Trustees of the Columbus Film Council are: G. Roger Cahaney, executive vice-president, Sterling-Movies; Dr. Edgar Dale, research associate in the School of Education at Ohio State; Carl M. Lenz, president of Modern Talking Pic-

### Meet USIA's "Bill" Pearson: He Knows Informational Films

▲ Bill Pearson's contributions to the film industry include a term as president of the Washington Film Council, 1965-66 and the post of chairman of the U. S. delegation to the 14th International Edinburgh Film Festival in 1960. He also served as executive secretary to the 1953 Conference on International Standards for Motion Picture and Filmstrip Cataloging, sponsored by the Library of Congress.

Mr. Pearson's post in the USIA also embraces chairmanship of the Interdepartmental Committee on Visual and Auditory Materials for Distribution Abroad. His wide range of interests include service UNESCO, where he held the post of technical secretary of the U. S. delegation which attended that organization's 1950 General Conference in Florence, Italy, and as advisor to the delegation chairman at UNESCO's 1960 conference in Paris.

Bill Pearson majored in Hispanic-American Affairs at the University of California where he also did graduate work in the economic history of Brazil. He has recently

W. H. Pearson, Chief, International Communications Media Staff

returned from a visit to Argentina and Brazil.

### Third Annual A-V Institute for Training Directors Opens Nov.

A third annual Audio-Visual Institute, sponsored jointly by American Society for Training Development, the National Association Visual Association and Indiana University, will be held on Indiana campus in Bloomington from November 6-11. The six-program will focus on basic principles in effective use of sight and sound for training and management development.

Murray O. Cunningham, Audionics Corporation, is chairman of the Institute. Program sessions include "Training With Closed Circuit Television," and "Motion Pictures-Techniques in Production Projection and Distribution." In opening address, "Putting Film Things First" will be delivered by Richard Lewis, a-v director of Jose State College. Members of the ASTD are charged a \$225 enrollment fee; non-members charged \$260 for the six-day institute.

Inquiries concerning reservations should be directed to the American Society for Training and Development, P. O. Box 5307, Madison, Wisconsin 53705.

**Pelican Films, N. Y., Acquires Lars Colonius Productions, Inc.**

Pelican Films, Inc., New York City, has acquired Lars Colonius Productions, Inc., a long-established tv production company. The announcement by T. J. Dunford, president of Pelican, notes that "the acquisition of Mr. Colonius, himself, is a most important addition to our company's structure. Advertising agencies and advertisers have long worked with and respected him because of his filmic talents."

Colonius joins Pelican Films in the creative capacity as director of animation, his field of specialization. He will also move into direction and supervision of live-action commercials. Colonius began his career in 1935 at the Walt Disney Studios. During World War II he served as director of animation with the U.S. Signal Corps in New York.

**Jack Moss Forms Own Company: It's Moss Communications, Inc.**

☆ Jack Moss has left Turteltaub & Moss, Inc., to form a new company, Moss Communications Inc., (MCI). Headquartered in New York at 10 East 40th Street, with offices in Washington, D.C., the company provides scriptwriting, art, directing and producing services for motion pictures, slidefilms, sales training programs, sales presentations, sales meetings, TV commercials, speeches, slide talks and collateral materials.

On a free-lance basis, and later as president of T&M, Mr. Moss has completed projects for such organizations and companies as A.T.&T., Pepsi Cola Company, TWA, Koppers Co., General Acceptance Corp., and the Federal Aviation Agency.

MCI will specialize in sales training and promotional programs and other in-company, trade and consumer communications on film and in print media involving motivation and education.

**It's "Comgro" If You're Looking for The Communications Group**

Comgro is the new short-cut nickname for The Communications Group — a corporation, according to an announcement by Louis Mucciolo, executive vice-president of the New York company.

"The film industry has been swamped to the point of confusion with three initial outfits," Mr.

Mucciolo said. "Our initials, 'TCGAC' would only add to the confusion. So we chose Comgro. We are in the communications business and we are growing. Comgro makes sense."

**DeLuxe/General Growth Movie Studios Continue at 2 Hollywood Plaza**

The addition of sixteen rooms to the Western Avenue, Hollywood, plant of DeLuxe Laboratories continues the firm's extensive expansion program which began earlier in the year. The new quarters include negative cutting facilities and additional office space. A 16mm theater (screening room) has also been added at the DeLuxe General Film Laboratories building on North Argyle in Hollywood, making a total of 16mm and 35mm theaters on the lot.

G. Carleton Hunt, president of DeLuxe/General, disclosed that over 80% of more than a million dollars worth of new equipment is being installed at these Hollywood plants in addition to improvements at New York and Chicago facilities.

**Manhattan Effects, Inc., Now Acquired by Technical Animations**

☆ The acquisition of Manhattan Effects, Inc. of New York by Technical Animations, Inc. of Washington, N.Y., has been jointly confirmed by Stanley L. Schwartz, president of TA and Bernard Barnett, Manhattan's chief executive.

The company has become a separate operating subsidiary of Technical Animations, Inc. and Barnett has been elected a corporate vice-president of that company. He continues as operating head of Manhattan Effects and of Barnett Film Industries, one of its divisions. Moses Weitzman has been named vice-president of Manhattan.

Joint New York City sales headquarters of both companies have been established at 321 W. 54th

## BUSINESS SCREEN INTERNATIONAL

European, U. S. Shareholders Meet Via Satellite As Warner-Lambert International Stages Historic First

A stockholder of a major U.S. pharmaceutical company asks the managing director of the British affiliate company — "How would Medicare affect sales of drugs?" — the reply came "We found difficulties at first — now we sell more drugs than ever before". There is nothing unusual in this type of exchange, familiar at all shareholder's meetings, but this time the stockholder who caught the speaker's eye was in New York, and the speaker was in London, England.

The occasion was the first person-to-person international shareholders meeting ever held — the Annual General Meeting of Warner-Lambert International at the Statler Hilton — where 100 U.S. shareholders saw and heard on a 10ft. wide screen a television picture of the managing directors of Warner-Lambert's affiliate companies in England, France, Germany and Italy, linked by Early Bird satellite to a room in London where they sat with the European shareholders. The Europeans asked and answered questions of the U.S. board of directors, headed by the president, Governor Alfred E. Driscoll.

### Build Shareholder Confidence

As companies grow larger, more complex and international sales rise (Warner-Lambert's international sales rose in 1965 by 16% and now represent \$141 million, or one-third of the company's total sales) — the need to make corporate officials at various levels available for discussion with shareholders becomes even more essential to public confidence.

In charge of the London end of the operation was Harry Low, a veteran T.V. program producer specializing in C.C.T.V. events, assigned to B.B.C. T.V. Enterprises, who with the T.N.T. International (a division of Theatre Network Television Inc.) in New York, completed a complex chain across the Atlantic. At the Statler Hilton, a Swiss Eidophor projection T.V. system provided the picture and shareholder meeting lighting conditions.

### Service of RCA Communications

RCA Communications Inc. were responsible for the use of the "Early Bird" Satellite 23,500 miles in space, operated by Comsat — and the satellite was linked to the Hilton by N.B.C. In London the British Broadcasting Corpora-

tion provided the facilities and the T.V. studio.

Finally, as the time of the meeting, 8:00 p.m. in London and 3:00 p.m. in New York, coincided with the period of peak overseas telephone traffic, Comsat and A.T.T. Long Lines Division had to cooperate with 14 countries in arranging clearance.

### Investment in Understanding

This pioneer international shareholders meeting cost an estimated \$30,000, but as Governor Driscoll said, "we are determined to be as well known in Europe as we are in the U.S.A." With 10,000 workers in W-L affiliated European plants and W-L products on druggists shelves all over Europe — and a profit growth in 20 years from \$19 million to \$400 million — there is no doubt that the money spent on the shareholders-relations activity will produce great results. For a-v men all over the world Warner-Lambert have offered a challenge.

### Shell Italiana Premieres Film on Underwater Search for Oil

Underwater oil exploration activities of Shell Italiana, Italian subsidiary of the Royal Dutch Shell group, are shown in *Capshell*, a new 11-minute 35mm color motion picture premiered in Rome earlier this year.

Lensed recently at Porte San Stefano on Italy's West Coast about 80 miles north of Rome, the film pictures Shell exploration and underwater diving operations in cooperation with Micoperi S.p.A. of Milan. Shell provides the engineers and Micoperi the highly-skilled diving personnel. Excellent underwater photography is a strong feature of the film as it underscores new methods which must be carried out beneath the sea.

*Capshell* was directed by Dore Modesti; Mario Vulpiani was in charge of photography with special underwater lens work by Masino Manunza and music by Francesco De Masi. Program International is noted as the producer for Shell Italiana.

## Homes of the Future

Next Third of a Century Is  
Previewed by American Home

**T**HE FIRST TWO-THIRDS of the 20th Century is over and if the nation's leading authorities on family living have anything to say about it, America in the next 33 years will be a truly wondrous place to live.

Housing will be simple and furniture will be opulent. New cities will be created with their own nucleus of employment. For many, commuting will be a thing of the past. People will have more money to spend and more leisure time to spend it. Although privacy within the family unit will be in style, more people will be doing more things outside. Mr. and Mrs. Joe Doaks and family will crave luxury and look for drama in their daily lives. Everything will be curvier — even the houses we live in. There will be more buttons to push. And credit cards will be the foundation of much of our buying.

#### Shown Advertisers, Agencies

These are other provocative predictions from the theme of an unusual new film now being shown to advertisers and their agencies by American Home Magazine.

Entitled *The American Home in the Next Third of a Century*, the 26-minute film, using a combination of motion, stills and animation, with original sound and

Predictions of the future are grouped in scene from American Home's film.

orchestration takes a futuristic look at America's living habits. Housing, furniture, appliances, fashions and leisure time are described through the eyes and words of a most authoritative team of narrators.

#### These Experts Offer Comments

For example, builder William Levitt comments on housing and cities. Designer George Nelson offers some compelling answers to furniture fashions in the next three decades. Researcher Leo Cherne brings the problems and opportunities of increased spare time into focus. Behavioral sci-

entist Dr. Ernest Dichter talks about the wants and needs of the American family. Hubbard Company, the editor of *American Home*, helps put their various viewpoints into proper perspective.

*The American Home in the Next Third of a Century* was written by Donald Lawder. Lawder Company also served as producer for *American Home* with Robert Bras receiving producer credit.

Publisher John Collins (at right) goes over film details with Donald Lawder, president of Lawder Company, producers of the picture.

Bras was responsible for animation photography as well.

#### Key Role in 1967 Promotion

*American Home* magazine launching the next third of a century with the best year in its history. According to John L. Collins, publisher, advertising line for the first half of 1966 was up 41.4 per cent over a year ago, and the circulation rate base was recently increased to 3,400,000.

The new film will lead off the magazine's 1966-67 promotion program which is built around the theme, "Reach for Tomorrow Today in American Homes."

Just a few  
minutes from now  
you can tell your story  
with slides.

That's Polaroid Land transparency film. Load the film into a Polaroid Land camera. Start clicking. And in a few minutes you can have 8 slides ready for immediate projection.

There are two kinds of Polaroid Land transparency film for making two kinds of slides. One is for line copy work. In 10 seconds it gives you a sharp, high-contrast transparency of anything set in type or drawn in ink. The other is for making transparencies of continuous tone material (people, objects, pictures, etc.), and its development time is 2 minutes. It produces slides un-

surpassed in sharpness, brilliance, and range of tones.

Both films are easy to use, so anyone can make slides with them. You just snap the shutter. Pull the tab. Wait for your finished picture. Dip it in a quick-drying hardening solution. Then slip it into a snap-together plastic frame and it's ready for the slide projector and your audience.

And what does this literally up-to-the-minute slide presentation cost? About  $\frac{1}{3}$  what you've been paying for the conventional kind. Here's the way to get your points across. Agree? Polaroid Corp., Cambridge, Mass.

## Prudential Sponsors a Youth Fitness Program

Nationwide Campaign Gets Underway With 1,000 Prints of  
Color Film Featuring Stars of National Football League

THE PRUDENTIAL INSURANCE COMPANY has launched a new "Poised for Action Youth Fitness Program" which features a half-hour color film starring 13 top National Football League stars. The film, *Poised For Action*, is a major public relations project for the company, involving some 1,000 prints already in distribution, and includes plans for future sports programs in seasons to come.

Made in cooperation with the President's Council on Physical Fitness and the National Football League, the picture offers some of the most interesting closeups of football skills and game-action sequences ever seen on the screen. It is narrated by Michigan State's famed coach, Duffy Daugherty, and features such gridiron stars as Gale Sayers, demonstrating his rushing ability; Bob Hayes, Sonny Randle and Pete Retzlaff, showing how to run pass patterns; Frank Ryan, in ball handling and passing; Pete Case and Mick Tingelhoff, blocking; Merlin Olsen, Billy Ray Smith and Maxie Baughan, playing the forward defense; Pat Fischer and Paul Krause, in pass protection; and Jim Bakken, showing how to kick.

### They're Great Off the Field

The 13 stars were chosen not only for their skill on the field but as good citizens, college graduates, and successful business and family men, as well. All have achieved almost as much success in their lives off the gridiron as on — good examples for youngsters seeing the film.

*Poised For Action* is part of an extensive program, consisting of not only the film in nationwide distribution, but Pru-sponsored visits to all NFL team training

camp this summer by thousands of youngsters and their parents for a close look at some of the nation's best examples of physical fitness. In addition, fitness clinics for the youngsters, themselves, supervised by NFL stars and local athletic figures, have been held in Los Angeles, Houston, Chicago, Milwaukee, Boston, Jacksonville and Newark.

### Booklet Is Widely Distributed

The two most important parts of the program (and those which will reach the largest sections of the general public) are the film and a 36-page physical fitness booklet, also called *Poised For Action*, which contains: a message from President Johnson citing the importance of physical fitness for the youth of today; an exercise

Frank Ryan, star quarterback of the NFL, Cleveland Browns pro team.

program demonstrated by Pete Retzlaff; football skill tips; a scouting report on the 15 NFL teams; and 1965 standings and 1966 schedules.

The booklet will be given to all persons seeing the film — which could run into millions of copies in less than a year.

### Produced by Contact Marketing

*Poised for Action* was produced by Contact Marketing, Inc., a New York marketing concern with strong roots in audio-visual media. Executive producer is David W. Lupton; producer, John W. Hennessey; and writer-director, Herman Masin, editor of *Scholastic Coach Magazine*. Filming took place at Ramey Air Force Base in Puerto Rico, last May. Scenes of outstanding NFL action last year is also included in the film.

Photography of the action at Ramey was done on 16mm, and

Rushing star Gale Sayers, of Chicago Bears, pictured in action.

also on 35mm motion picture with a 1/1000 second shutter speed. The latter footage will be used for sequence demonstration photographs to be included in forthcoming instruction booklet which will be part of the program in the near future.

### Get Prints from AF or Modern

Free-loan distribution of film is being shared by Association Films, Inc., and Modern Talking Picture Service, each serving several of Prudential's regional offices. Audience will be in schools, colleges, service clubs and groups interested in youth, sports or physical fitness. In addition, 100 prints have been given to the Department of Defense for showing to armed forces; and 50 prints will be made available for showing at local television stations.

A New, Exciting And Unusually Effective  
Sales Training Film

# THE SELLING SECRETS OF BEN FRANKLIN

Every American has heard of Ben Franklin. His achievements in science and statesmanship are part of our history. But few realize that Ben Franklin was one of the top salesmen of all time. His principles, philosophy and actions form the basis of the selling skills which successful salesmen use today. In this new film Ben Franklin is brought to life and demonstrates in modern surroundings how his principles of selling apply today just as effectively as they did more than two hundred years ago.

An inspiring, dramatic and superbly produced film which few salesmen will forget once they have experienced its impact, it makes an outstanding feature for a sales meeting or as a basic part of any sales training program. It is in 16mm, black and white with a running time of 30 minutes. Sales executives everywhere are aware of the need and importance of continually getting over to their salesmen the fundamentals of selling. This film will do just that—and do it superbly.

**We're looking at our 10th anniversary.**

It's been a busy 10 years for Copley Productions. More than 35,000,000 people have seen our films since this audio-visual division of Copley Newspapers was started in 1956. Perhaps one of those viewers was you. We sincerely hope so.

There are many firms that produce promotional and institutional films-to-order for business and industry. Although there are many newspapers that have such films produced for their own purposes, we believe that Copley Productions is the only in-plant motion picture production unit in the entire world.

A staff of highly skilled craftsmen employing the latest motion picture equipment combine knowledge, artistry and imagination to produce these outstanding films. Copley Productions has reaped international recognition for the excellence of both its films and filmstrips.

All Copley Productions motion pictures are 16mm, and may be used without charge by all interested groups. Educational filmstrips are also available for purchase. Please direct inquiries to the nearest Copley Productions distribution center—7776 San Diego Avenue, La Jolla, California, or 434 West Tower Place, Aurora, Illinois. Or if you prefer, inquire about the films at any of the Copley Newspapers.

Industrial decentralization brings a new factory to Rochelle; during construction, young workers are being trained as future personnel.

### "COMMENT FONCTIONNE LA TELEVISION"

Sponsor: N. V. Philips Gloeilampenfabrieken

Producer: N. V. Carillon Films

The principles of gathering, transmitting and displaying television images are explained.

## CATEGORY C

(on industrial subjects which have the purpose of contributing to the general public.)

(CONTINUED ON THE FOLLOWING PAGE 38)

The impressive facade of historic Venice is dominated by its towering Campanile and flanked by the Ducal Palace (at right). Beyond lies Piazza San Marco, facing the pinnacles and domes of St. Mark's.

# Films of 17 Nations Compete at Venice

Britain Wins the Grand Prix at the 7th International Industrial Film Festival

THE ANNUAL INTERNATIONAL INDUSTRIAL Film Festivals, sponsored by the Confederation of Industrial Federations of Europe (CIFE) are very tradition-conscious. Concepts of geography appear to be needlessly limiting an event that holds promise through wider latitude of free world participation; the definition of "industrial content" lessens the potential for films serving distribution and selling. Dominance of 35mm theatrical projection takes little account that 16mm sound-on-film is the predominant means by which factual motion pictures are shown and the advent of 8mm sound has yet to be considered by Festival authorities.

But the 7th International Industrial Film Festival which opened on September 12 on

the Lido in Venice, Italy remained the world's foremost showcase of great industrial films. The showings in the Palazzo del Cinema were, by and large, most proficient in the 35mm dimension; 16mm suffered greatly by comparison. Arrangements by this year's national host: the Italian Confederation of Industry, were considerate of jurors, delegates and the press.

In this setting and time, 106 motion pictures from 14 European countries and two "all-European entries (Euratom and C.E.C.A.) competed with one another and those of three lands abroad: the United States, Israel and South Africa. And out of the week-long screenings by 28 official jurors, there emerged the final 22 prize-winning films in the seven official categories of the Festival. Six additional

These dignitaries officiated at the awards ceremonies which climaxed the Festival. In the picture (left to right), Ing. Domitro R., president of the organizing committee, Lidio Bozini, president of international jury, the Prefect of Venice, Italian Minister for Foreign Trade, Sen. Gaetano Folloy, Mario Valeri Maurica (standing), president Industrial Association of Venice, Emmanuel Mayolle, v.p. Confederation of Ind. Federations of Europe, Dr. Rosario Errigo, representing Minister for Tourism; and René Arnaud, secretary-general, the Confederation of Industrial Federations of Europe.

## We Were There: the Inside Story of the Festival in Venice

special prizes" were also awarded by Italian groups.

Great Britain, with three first awards and two second prizes, received the Grand Prix of the Festival, followed closely by Germany, with one first prize, two second awards and two third prizes. The Grand Prix might have gone to Holland, too, as that country swept one first place, one second prize, two third prizes (including a tie); and one fourth award.

### Films from Finland, Sweden Win Firsts

Other first prizes of the Festival were shared by Finland and Sweden, with one apiece. France had one second prize and two third prize awards, including the tie shared with the Netherlands. The United States won a single second prize. Italy had a third prize and a fourth place award but was comforted by special prizes given by national groups of that country to four of its entries.

Two of the special prizes also went to German entries. All of these special awards were made by Italian manufacturing, press or publicity groups, other than the traditional Inforfilm (international distribution) prize, given this year by its Italian member, DIFI, of Rome.

### Time for Discussion Was a Real Asset

Vital statistics are just that and little more. The real story of the Festival lies in the images on the screens and in the discussions, social participation and the lively interchanges between members of the juries and various delegates. Venice resumed the healthy practice of holding a "parliamentary" discussion session through an entire morning before the Festival ended. Here delegates expressed their views on topics of international concern. An historic "first" was achieved when Francois Lutangu, representing the Ministry of Information of the Republic of the Congo, made a brief but impassioned appeal for "films to help teach our people better methods of agriculture."

Members of the official juries represented industry, industrial federations of their countries and governments who participated in the Festival. The U.S. was represented (through

The Prefect of Venice (center) presents prize given "Steel and America" to one of U. S. delegates, Carl Lenz (right) who accepted on behalf of American Iron & Steel Institute.

the National Association of Manufacturers and the Council on International Nontheatrical Events) by Ott Coelln, publisher of BUSINESS SCREENS and Carl Lenz, president of Modern Talking Picture Service, Inc. Per-Erik Lonnfors, of Finland; Erik Heimann, of Denmark; and Dr. Willi Riesenber, of Germany, were typical of other jurors who represented their national manufacturer groups at Venice. Great Britain named as jurors Oliver Farmer (of Associated Electrical Industries Ltd.) and Peter Spearing (of The Imperial Tobacco Co.). Truls Treider was one of Norway's delegated jurors, representing the Federation of Norwegian Industries.

### Sponsor Executives Among the Jurors

Other well-known film sponsors were represented on the juries. Dr. C. A. Crena de Jongh, information officer of Unilever; Dr. Karl Kagi, of Sandoz A.G. and Dr. Max Leutenegger were among these experienced executives who judged films at Venice. Rudolph Schmidt, a Unilever executive and Herbert Podhradsky, film institute executive, were Austria's contributions to the official jury. Mrs. Inga Millar,

widely known for her work at Norway's Productivity Institute, was the other juror from that land. Sweden sent Arne Lundmark, representing the Skandinaviska Banken, and Vabis, as that country's jury members.

This cross-section of jury membership underscores the competence, for the most part, of the men and women who selected the award-winning motion pictures in 1966. They served in groups of seven on each jury, gently viewing and scoring in their respective categories, meeting daily at luncheon sessions. These were the criteria followed: (1) is the specific objective of the film achieved? (2) is the film likely to communicate at level of the specified audience? and (3) ju

Nature's handiwork inspires the designs Finnish textiles of Marjatta Metsovaara, the creator of that country's first-prize film. Shown at work on a sequence for "Textiles" producer Aimo Japerholm, head of Sektor Film.

the technical and artistic qualities of the film (consider visual quality, sound and tempo).

### 16mm Is the Universal Medium, But ...

The limiting factor which heavily influenced jury consideration was the uniformly poor quality of 16mm projection. Inevitably preceded or followed by superb 35mm showings such films were compared unfavorably with competing subjects shown in 35mm. The result is apparent: not a single 16mm entry from any country received a jury award. The sole U. S. winner: a 35mm color print of *Steel and America* only served to emphasize that critical failure at Venice. Another U. S. entry, the best-seen factual motion picture of this decade, Johnson's Wax' *To Be Alive!* was brilliantly projected in a wide-screen 70mm version (special composite print) but disqualified as a pre-1965 production. The wave of applause which swept the theater at the Palazzo del Cinema was heart-warming, however, as this film has a great future when contemplated in 70mm theatrical arrangements have been completed for its European public showings.

This year's national host, the Italian Confederation of Industry, headed by its president Angelo Costa, shared organizational honors with Dr. Domireo Re, vice-president of t

The Palazzo del Cinema on the Lido at Venice is a familiar site for international film competition. This building's large, well-equipped main theater was supplemented by the smaller Salon Volpi where the international press and delegates viewed the 124 films submitted by 17 countries.

Industrial Association of Venice and Dr. Leonard Algardi, of the National Association of Cinematography (ANICA). Dr. Enzo Cagnato was in charge of projection arrangements and Giuseppe Gozzi helped Giacomo Guiglia for the Italian Confederation as those men handled principal arrangements for the Festival.

### Three Best Pictures of the Festival

But the film's the thing that Festivals are made for! The three best pictures of this 7th competition were unquestionably Finland's beautiful composition of textile designs emanating from nature's inspiration: *Textiles*, created by Sektor Filmi's talented Aimo Japerholm. *Two Cubic-Centimeters for Life*, the German drug industry film out of Dr. Georg Turk's Leonaris-Film of Boebligen was a

Sektor Filmi's Aimo Japerholm sets up his Arriflex for another scene in "Textiles." The color pictures in this non-verbal prize winner were one of the finest in recent years; music supplemented the blending of fabrics with natural beauty to complete this tone-poem on film.

re-exposition of this subject, and the high-interesting, very amusing *Tortoise and the Frog*, sponsored by Pirelli and created by Callaghan-Hudson-Brownjohn and Associates was a rather theatrical fare. This doesn't fault the quiet beauty and provocative idea offered by Sweden's first-place winner: *Like Rings on a Tree*. This film won the only top award given

by festival leaders meet the international press at the Palazzo del Cinema. At right (l to r): Giacomo Guiglia, Italian Confederation of Industrial Federations of Europe; translator; René Arnaud, secretary-general, Confederation of Industrial Federations of Europe; Ing. Domingo Re (standing), president of organizing committee; Atv. Lidio Bozini, president of international jury; and Dr. Rosario Errigo, representing Minister of Tourism. Many of many journalists attending this session are pictured below.

Jurors discuss Category E and F selections at Venice. Shown above (clockwise, left to right): chairman Osmo Würo of Finnish Employers' Confederation (back to camera); jury's feminine translator-recorder, M. Georges Dauge, secretary-general of French steel tube association, Dr. Thomas Ukert, of Esso A. G. in Germany; Herbert Podhardsky, Austrian film-study specialist, Ott Cochl, publisher of Business Screen; Carl Lenz, president, Modern Talking Pictures Service; and Dr. Giuseppe Tavazza, of the Italian National Cinematographic Union.

a black and white subject at the 7th Festival!

*Elements Facing Elements* showed a pretty good job of bridge-building in Holland but was far below the technical excellence of Britain's *Forth Road Bridge* which won a similar category first place at Rouen last year; another British entry, *Visual Aids*, captivated jurors who know the value of a good film on this subject; and *The Stable Door*, was a competent exposition on industrial security.

### Those Colorful "Palettes of Fashion"

One special prize: the DIFI (Inforfilm) award given *The Palettes of Fashion*, sponsored by Farbwerke Hoechst AG, was really deserving. Color dominates the fashion scene, which this handsome film depicts, and its delineation of the role played by synthetic dye-stuffs was deemed "most suitable for international distribution". Other "special awards" made by Italian press and publicity groups, were compensations based on national loyalties rather than for professional excellence.

As often happens, some of the Festival's most interesting films won no prizes. Scania-Vabis entered a very informative color film on the building of *The Jungle Road* which brought the heartland of interior Brazil to the screen. Denmark's fine film, *Milk for De-*

Excellent personnel film, "Les Clients" won award for Les Analyses Cinematographiques.

velopment, is one of the most useful current offerings. Underscoring the fact that a famine threat can be combated with milk, it shows how Kenya's small farmers are turning to modern dairying methods with notable success. Learning how to conserve surplus production during their rainy season they have turned to milk powders to compensate for low yields during the dry season. Sponsored by A/S Niro Atomizer, this film was made under the auspices of Food and Agriculture Organization of the United Nations, contributing to the FAO's "Freedom from Hunger" campaign.

# AWARD-WINNING MOTION PICTURES AT THE SEVENTH INTERNATIONAL INDUSTRIAL FILM FESTIVAL

(CONTINUED FROM THE PRECEDING PAGE 35)

## CATEGORY C

Films which have the purpose of contributing to the prestige of the industry concerned, intended primarily for the general public.

First Prize: Great Britain

### "THE TORTOISE AND THE HARE"

Sponsor: Pirelli Limited

Producer: Cammell Hudson & Brownjohn Assoc.

In this modern version of La Fontaine's fable, the tortoise is an enormous articulated truck, the hare, a 150 mph E-type Jaguar. The action: the inter-play of the two vehicles and their drivers as they traverse Italy's "autostrada del sole" with the lorry driver always seeming to get ahead of the Jaguar. That's the way the fable ends.

Second Prize: The United States

### "STEEL AND AMERICA"

Sponsor: American Iron & Steel Institute

Producer: Walt Disney Productions

The story of steelmaking from ore to the finished product is pictured in live action and animation sequences featuring Donald Duck. The latest development in steel processes are shown.

Third Prize: The Netherlands

### "PHILIPS CAVALCADE— 75 YEARS OF MUSIC"

Sponsor: N. V. Philips Gloeilampfabrieken

Producer: N. V. Joop Geesink's Dollywood

A puppetoon about the musical crazes of the past 75 years helps build goodwill for Philips.

Fourth Prize: Italy

### "NELLA VOSTRA VITA" (IN YOUR LIFE)

Sponsor: Italsider

Producer: RPR (Realizzazioni Pubb. Relazioni)

With the Italsider Pavilion at the Milan International Fair as its setting, this film shows the many uses for steel products in daily living.

Scene from "Steel and America" shows a ladle of molten alloy steel lowering into a vacuum degassing unit at a mill. This color picture won a second award at the festival in Venice.

## CATEGORY D

(Films on specific industrial subjects, products or materials for specialist audiences.)

First Prize: The Netherlands

### "ELEMENTS FACING ELEMENTS"

Sponsor: Ener-Cemij — Rober N. V.

Producers: Joop Burksen and Ruud Herblot

Showing the use of pre-stressed concrete in the construction of the longest bridge in Europe, across the Oosterschelde in Sealand.

Second Prize: Germany

### "BAUEN MIT PROFIL"

Sponsor: Thyssen-Industrie GmbH

Producer: Deutsche Industrie-und Dokumentar Film GmbH

Shows the swift erection of a factory building using sheet steel, galvanized by the Sendzimer process. Engineering details are given emphasis.

Third Prize: Germany

### "HARTER SCHAUM"

Sponsor: Farbenfabriken Bayer AG

Producer: Bayer-Filmstelle

Versatility of "Hartmolopren" polyurethane foam material is shown as production and application are pictured in various industries.

\* \* \*

## CATEGORY E

(Films on industrial application of scientific principles and research, intended primarily for special audiences, including educational establishments, rather than for general public showings.)

First Prize: Germany

### "ZWEI KUBIKZENTIMETER LEBEN"

(Two Cubic-Centimeters for Life)

Sponsor: Medizinisch-Pharmazeutische

Studiegesellschaft e.V.

Producer: Leonaris Film-Dr. Georg Munc

Millions of lives have been saved since succeeded in isolating the first pure substance from a plant in crystalline shape: morphine extracted from poppy sap. Other curative substances have been built up which do not exist in nature. The limits between nature and chemistry are fluent. The film shows its specialist audience how the modern chemist can produce life-saving substances synthetically, making products found in nature but vital to medicine.

\* \* \*

Second Prize: Great Britain

### "PHYSICS AND CHEMISTRY OF WATER"

Sponsor: Unilever Limited

Producer: World Wide Pictures Ltd.

This most common liquid's many unique properties are shown in fascinating detail. The surface tension is of special importance in many of detergents, the film explains.

\* \* \*

Third Prize: Italy

### "OPERZIONE SICUREZZA"

Sponsor: Fiat — Direzione Stampa

Producer: Cinefiat

Extensive laboratory-testing and road-testing by Fiat helps improve its cars and adds to driver safety. An excellent automotive exposition.

Pirelli Limited's charming cinematic fable of an Autostrada adventure by "The Tortoise and the Hare" put beautiful Lt. Allsop at the wheel of her Jaguar in an amusing race against ponderous "tortoise" driving a truck. In the scene below the "Hare" gets more than usual attention from a team of AGIP garage attendants at the sight of a mosaic of rooftops glimpsed at San Gimignano along the Autostrada del Sole typical film's scenic beauty.

Man's relentless search for healing drugs — from nature and in the chemical laboratory — is given new dimension in "Two Cubic-Centimeters of Life" the first prize winner in Category I, at Venice. Ingredients of witches' brew were distilled from deadly plants (art at left). In today's research laboratories (above) synthetic compounds are being sought by scientists.

#### CATEGORY F

(*is on management and manpower training of industrial audience rather than the public.*)

First Prize: Great Britain

#### "VISUAL AIDS"

Sponsor: British Ministry of Defence (Navy)  
Producer: Stewart Films Limited

The film itself says: "the hearing sense is requisite a lot by most instructors, especially those with a gift of gab who like to keep their classes awake with verbal traffic noise. In a humorous way, this picture reviews the whole gamut of Visual Aids, from chalkboards, flannel and magnetic boards, charts, models to still, motion picture and overhead projectors.

Second Prize: France

#### "LES CLIENTS SONT CE QU'ILS SONT"

Sponsor: Credit Industriel et Commercial  
Producer: Les Analyses Cinematographiques

This bank training film (useful in many other cases) shows customers are what they are: an effort must be made to adapt yourself to their different temperaments; then service will be improved; accounts maintained and profits up.

#### CATEGORY G

(*is on accident prevention, occupational health, re-education and measures of social security, for specialized industrial audiences.*)

First Prize: Great Britain

#### "THE STABLE DOOR"

Sponsor: The British Insurance Association  
Producer: Ronald H. Riley & Associates

Through dramatic narrative, the story of a plot to rob a warehouse is told with a suspenseful angle: have proper security precautions been taken as recommended? Or will it be a matter of "locking the stable door" after the loss?

Second Prize: Great Britain

#### "THE NATURE OF FIRE"

Sponsor: The Fire Protection Association  
Producer: Gerard Cookson F.I.F.P.

#### A CHALLENGE IN "VISUAL AIDS"

"It's very easy for visual distractions to compete too strongly with what this instructor is saying." There's pointed humor in this scene from "Visual Aids."

Background on the nature of fire helps introduce fire hazards relating to everyday situations. Principles of control are, however, secondary to "prevention, better than cure," the film says.

Third Prize: France

#### "VICTIMES PAR IMPRUDENCE"

Sponsor: Ministère des Postes et Télécomm.

The film deals with prevention of accidents at work in various Postal, Telecommunication jobs.

#### SPECIAL PRIZE WINNERS AT VENICE

Special Prize — From Italy's National Chemical Industry Association:

#### "HERR KEKULE, ICH KESSE SIE NICHT"

Sponsor: Gesellschaft Deutscher Chemiker  
Producer: Otto Martini, Gesellschaft für bildende Filme

Shows the life of chemist August Kekule, discoverer of the benzene ring, thus opening the door leading to organic chemistry's growth

Special Prize: from Italy's National Cinematographic Industry (ANICA)

#### "OCCHIO ALLE TICHIETIA"

Sponsor: Monteshell  
Producer: Gruppo Cinema Montecatini

Cartoons help explain how to avoid damage to plants, humans and domestic animals while getting maximum benefit from chemical pesticides.

Special Prize: Press Association  
Triveneta (Italy) awarded to:

#### "CHILOMETRI 1696"

Sponsor: Consorzio-Siderexport

A documentary on the laying of one of the world's longest gas pipelines, from Santa Cruz to Buenos Aires by the firm of Saipem-Siderexport.

Special Prize: DIFA (Intortilm)

#### "THE PALETTES OF FASHION"

Sponsor: Farbwerke Hoechst AG  
Producer: GBI, Munich, Germany

The world of women's fashions in a wealth of colorful scenes that show its dependence on progressive dye technology. Selected for "best technical treatment and artistic possibilities for international distribution" and most deserving.

Special Prize: Radiotelevisione Italiana

#### "LA DIGA DI KAINJI"

Sponsor: Impresit Giroa Edigrafim S.p.A.  
Producer: Carlo Audisio

Construction of the Kainji Hydroelectric plant in north-central Nigeria is detailed in the film.

Scene from "The Stable Door" as mobster Harry discovers that the night watchman is more than a match for him. This British Insurance Association film weaves detailed advice on security measures into gripping, dramatic picture which won top prize for producer Ronald Riley.

# The Venice Festival Report

**I**N RETROSPECT, this 7th International Industrial Film Festival upheld most of the traditions of its predecessors (both good and bad). The prize-winning films were worthy of widespread international distribution; others that failed to win prizes, notably the John Wax picture, *To Be Alive!* had excellent audiences and came to the attention of important delegations.

Press coverage was excellent, with Italian papers in the majority, as might be expected but with key men and women out of Britain, France, Germany and other countries in attendance. One of the largest delegations at the Festival, incidentally, came from Great Britain.

This event would achieve true worldwide significance if its sponsors (CIFE) chose to widen their horizons and invite such countries as Australia, Canada and Japan, among other notable industrial film areas, to participate. The single U. S. vote given delegates that country was little enough reward for the numerous entries and the cost of travel involved. Festival sponsors rightly believe that to hold the reins of this event but vote on the films is a minimum reward for each national delegation to receive and this event will not merit "international" status until films from all over the world are invited to enter competition.

A closing word would add another laurel to *The Hare and the Tortoise* prize honor. The promotional "map-folder" issued to publicize this amusing and eye-filling picture was one of the best we've ever seen! The story behind this film is yet to be told in an early subsequent issue of this international journal.

### In the picture panel, top to bottom

A galaxy of Festival jurors and delegates is pictured in our "Venice Album" scenes at left. Beginning at top, there's Sweden's Arne Lundmark (at left) and, at the right, that's Ke Blauw, of Holland's Technical Film Centre. Next top scene includes Erik Witte of Denmark and Erik Heimann Olsen, former manager of the Federation of Danish Industries. At the extreme left in same photo is Hugh Wickham, of Shell International in London. The German delegation is in next scene (second from top, at left); E. Hugo Ritter, of the German Federation of Industry is at the extreme right. The adjacent scene has J. Michael Shersby, of Britain and former head of the British Industrial Film Association in center. Third from top, we meet France's Lutangu of the Republic of the Congo, and Ott Coelbe, publisher of *Business Screen* at Don Elound, European representative of Modern Talking Picture Service. A Hattum, talented Dutch film maker is chatting with a good friend Karl Fogler, head of the films' section of the O. I. C. D. in scene at the right. Fourth scene, top has Sven Hallonsten at the right. He key man in Sweden's Council for Personnel Administration. And in the next scene Brian Coe of the Midland Banks in Britain is man in center. Producer Hattum chats with Mr. and Mrs. John Chattock, correspondent and film critic on London's *Financial Times*. The Erik Wittes are at right in group in the Palazzo del Cinema. And two bottom scenes prove that jurors and delegates were very attentive at Festival screenings in the Palazzo del Cinema.

MORE THAN 20 MILLION PERSONS have now seen *Steel and America*, the American Iron & Steel Institute's prize film on the history and development of steelmaking in the United States. The half-hour color film completed its first year of distribution on October 1, reaching 20,818,371 viewers, for one of the largest first-year audience totals of any motion picture on record.

Television viewers accounted for 19,808,000 of this figure, obtained through 432 telecasts in almost every state in the union. Modern Talking Picture Service registered an audience of 17,915,600 from 407 telecasts during their 1965-66 campaign. An additional 25 telecasts produced an estimated audience of 1,893,000. These were arranged primarily by the various steel company members of the Institute and included paid telecasts on an evening time.

#### 18,868 Showings to Community Audiences

Distribution of the film to community audiences has been reported at 18,868 screenings for 1,009,771 persons. Sterling Movies, Inc. has handled the commercial phase of this distribution program with 17,038 showings to an audience of 807,771. Steel company members of the Institute, as of August 1, also reported for 1,830 showings to an audience of 22,000 in community groups.

Sterling Movies has also sold 25 prints of *Steel and America* to companies and organizations outside the steel industry during the one-year period. These purchasers included the John Deere Company, International Harvester, Caterpillar Tractor, The New York Telephone Company, and the American Society for Metals.

#### Forty Per Cent of Telecasts Run in Color

Modern Talking Picture Service's breakdown of types of stations showing the film indicated that 60 per cent were network stations, 17 per cent — independent commercial stations, and 23 per cent were educational stations. Forty per cent of the telecasts were in color, and 19 per cent were shown between 7 and 11 p.m., prime viewing time.

#### Only American Film Honored at Venice

Sterling Movies' average monthly audience for community and school showings has been 734, of which 47 per cent were adults.

*Steel and America*, which received a second award at the recent 7th International Industrial Film Festival in Venice — the only American film to be so honored — was produced by Walt Disney Productions. In his inimitable way Donald Duck traces the evolution of steel up to today's highly-developed technology, and takes a look at the innovations that are coming from steel research laboratories.

The film opens with animation sequences showing how iron ores became part of the earth's crust in the geological turmoil of ages past. Graphics and live action then document the parallel development of America and the steel industry.

Present-day steelmaking is shown, with the revolutionary new processes and techniques that have been adopted in recent years: the basic oxygen furnace turning out a heat of steel in a fraction of the usual time; con-

Donald Duck, the heroic ironmaster in "Steel and America" is helping inform thousands of youngsters.

## 21 Million Have Seen "Steel and America"

American Iron & Steel Institute Color Film Headed for Record Total Audience

tinuous casting, in which a ribbon of hot steel emerges from a bottomless mold; vacuum melting, and vacuum de-gassing. The film also illustrates how electronic computers harnessed to huge steel rolling mills are being used to help improve the uniformity and quality of product.

Some of the industry's 5,000 researchers are shown at work on new projects ranging from ore beneficiation to further utilization of nitrogen, hydrogen and oxygen to create better steels. The point is made that only about half the iron atom's potential for strength and versatility has been explored so far.

The film closes with an affirmation that the industry will meet the demands of steel's Century Two as it has in the past.

### PROMOTION BUILDS AUDIENCE

*Steel and America* has been backed by an impressive promotion campaign, put on by Modern Talking Picture Service, Sterling Movies, and the public relations staff of American Iron & Steel Institute.

One important medium has been the Institute's Idea-Gram for Steel Companies, which tells them that "however excellent its quality, no film sells itself without backup publicity and promotion. In *Steel and America*, the steel industry has at hand a most effective means of telling its story to mass audiences. If adequately promoted the film could be seen by 70 million people in the next five years.

Similar Idea Grams are issued periodically to recap useful ideas that have worked for steel companies in promoting *Steel and America* and to report showings-to-date and other news and comment. Their primary purpose is to encourage steel companies to implement their local promotion of the film.

#### Well-Publicized in Industry Journals

Steel company publications have given excellent support to the film. Newspapers, maga-

zines and newsletters of at least 25 companies have carried major features. Even though the commercial distributors promote the film extensively, industry publicity provides a great help in building additional interest locally through mailings to civic and fraternal organizations, clubs, school officials, and TV stations.

#### Steel Companies Active in Promotion

Here is how several companies have been promoting or making special use of the film:

Bethlehem Steel Corporation mailed to 1,200 civic leaders and school administrators in its plant communities a copy of the descriptive booklet, *Highlights from Steel and America*, and a print order form. In each community, the covering letter was signed by the local plant manager. Company purchased 30 prints of the film, which, after showings held for about 18,000 salaried employees throughout the country, were donated to school

Scene from "Steel and America" shows electron microscope being used by a scientist in steel company's research center. It is helping him develop the improved steels needed by industry.

SEE...

Photoprints and posters using this material were widely distributed to steel companies and used for bulletin boards and display announcements which helped promote the picture.

## STEEL AND AMERICA:

districts in which Bethlehem has operating facilities.

A New Year's Day showing in Cleveland was promoted by Republic Steel Corporation by means of (1) *Steel and America* posters displayed throughout Republic's plants and offices in Cleveland, Canton and Massillon, in the lobbies and windows of Cleveland's major banks, and in the offices of the Canton and Massillon Chambers of Commerce; (2) postcard-size reminder cards distributed to nearly 12,000 employees; (3) radio spot announcements; and (4) spot ads in the TV sections of local newspapers.

### U. S. Steel Informs Its Stockholders

U.S. Steel advised its 372,000 stockholders of the corporation's participation in the making of the film, told how interested groups can obtain information about showings by contacting the company's public relations department.

Brochures issued by Atlantic Steel Company, Granite City Steel Company, and Republic Steel now include an announcement of how groups can borrow prints.

In the Lafayette, Calif., school district, a print loaned by Armeo Steel Corporation was

shown simultaneously to ten classes, with a total of 450 students, by means of a closed-circuit TV network serving the schools.

In addition to its recent award at Venice, *Steel and America* took first prize in the Community Service Category in the International Management Film Festival held by the So-

ciety for Advancement of Management. It received a Golden Eagle Award from CIE second prize at the National Visual Presentation Association Awards, a George Washington Honor Medal from the Freedom's Foundation and a Certificate of Honor at the 1966 American Film Festival.

ENTERTAINING AS HE INFORMS VIEWERS OF "STEEL AND AMERICA" THE INIMITABLE DONALD DUCK ENLIVENES THESE ANIMATED ROLES

Donald pours molten iron into a mold to cast a sword, which, because it is brittle, soon breaks. And you know what that does to him!

Donald learns that if he re-heats the broken pieces of the sword in a clay pot and adds a bit of charcoal or carbon, he can make ste-

As a Pilgrim, Donald holds a small ingot made of steel. Available in small quantity, steel was rare and precious metal in those times . . .

As a scientist in a modern steel company Donald finds his fellow researchers use latest in scientific equipment in their wo-

The audience acceptance accorded this excellent American Iron & Steel Institute motion picture offers some notable lessons to all sponsors. First of all: *Steel and America* is top-flight entertainment, created by a company with "built-in" boxoffice stature and professional competence. The film delivers a message alright, but does it with superb live action sequences and bright animation.

And there's more. The sponsor has wisely chosen two foremost national film dis-

tribution companies and the results are identical. Behind the whole program, finally, there's strong promotion and cooperative publicity by both distribution and steel companies. This is the kind of combination no winning friends for America's steel makers.

\* \* \*

Below: young pupils in this Pearl River, N. classroom watch intently as the color picture unfolds. "With Donald in the film, I wanted learn about steel," says one of the viewers.

### DISTRIBUTION ANALYSIS OF "STEEL AND AMERICA" IN ONE YEAR

# A Worldwide View of Parke-Davis Progress

International Concern Observes a Centennial of Service to Better World Health  
 With 28-Minute Film Showing How Research Is Bringing More "Time for Living"

LIFE EXPECTANCY OF MAN has been extended by years through the wonders of medical science. And making important contributions toward more "Time for Living" are pharmaceutical research and manufacturing organizations as Parke, Davis & Company. This 100-year old drug firm is a world organization with some 13,000 people employed in 100 countries. It is also an experienced sponsor of the film medium—which it is primarily used for showings to physicians and allied health professional groups.

The scope of that film program was widened in 1964 when Parke-Davis sponsored *Over-Attack!* which was created to show the benefits of its products in better world health. In its centennial anniversary year, the company has gone even farther and commissioned The Handy Organization to produce a sequel with a most appropriate title: *Time for Living*. The new 28-minute color film has several relevant goals:

**Gives Employees a Sense of Participation**  
 First, it provides the company's own world view of employees with a comprehensive and stimulating view of today's complex and diverse Parke-Davis organization and, secondly, brings these people in so many different ways a sense of participation in the contributions which the firm has made to better world health.

And, building on the successful distribution of earlier films by Modern Talking Picture Service, *Time for Living* is sharing that story with public audiences and the success of that effort has, in the company's own words "been most encouraging and very worthwhile." Thousands of U. S. bookings have been supplemented by hundreds more in other world areas.

**Representations on Every Continent Are Shown**  
 Cameras have captured essential sequences of representations on every continent, sampling

manufacturing plants, research laboratories and sales branches around the globe. Grant Harris, of JHO's production staff, was enlisted for his extensive international experience on such films and arranged for the required crews.

### Overseas Film-Making Has Its Problems

Problems were met and overcome, sometimes with the aid of Parke-Davis representatives. Some were less simple, including political turmoil in Africa, extreme heat and inevitable rainy spells. At one location, for example, friends at the University of Ibadan and patient outwaiting of tropical storms, enabled production director Harris and the company's public relations' man, John A. MacCartney, to obtain some essential footage. Regulations on film and equipment import were other hurdles which required real ambassadorial skill.

*Time for Living* takes viewers on an armchair tour of the company's facilities and resources, designed to save the lives of the ill and to protect the health of those more fortunate. But seldom has a film brought home so forcibly the challenges faced by medical science in its fight to wipe out sickness and disease. For every success, there are dozens of setbacks. For every discovery, a possible pitfall. But as the film shows, the years tick away on the clock of life and scientists and drug researchers are constantly slowing down the movement of Time's hands.

### Armchair Tour of Far-Flung Activities

Viewers are taken from the firm's headquarters in Detroit to a major research complex in England. From a manufacturing center in Mexico, the scene shifts to an experimental farm in Australia. And there are long looks at a well-scattered army of medical personnel who daily inch closer to their goal of a disease-free world. *Time for Living* is an encouraging summary of how far man has come in his all-important battle for life. And

There's more "Time for Living" today, thanks to research efforts of Parke-Davis scientists.

It's also a reminder of how far he has yet to go. Viewed from either angle, it's a provocative motion picture.

\* \* \*

### Company Notes 60 Million Viewers Have Seen Five Parke-Davis Films

A success story engineered by one of the world's largest drug firms is being acted out daily in such unlikely locales as Blue Eye, Mo., Arpin, Wis., and Blanket, Texas.

The tale is one of numbers, and the tools being put into use by Parke, Davis and Company are a group of five full-color motion pictures that daily are being shown by an ever-growing number of television stations, civic groups, fraternal clubs, church organizations and schools throughout the largest cities and smallest towns in the nation.

So far, an estimated 60 million persons across the U.S. have seen at least one of the films since the first was introduced nine years ago. That's better than 30 per cent of the country's population, and the response has left Parke-Davis officials delighted.

"These films have meant a great deal to our continuing effort to acquaint people not only with the job being done by persons connected with the U.S. health picture," said Carl Johnson, vice president of public relations.

"By this we mean the doctors, nurses, research scientists and others in the medical field (CONTINUED ON THE FOLLOWING PAGE 65)

London: youth in a relaxing pause before historic spires across Thames.

Japan: advice from an "elder statesman" on what makes the airplane fly.

# EXPO '67: Audiovisual Preview

Sight-Sound Techniques to "Involve" Audiences at Montreal as Thematic, International Pavilions Feature Screen Media

THE PRIME PURPOSE of universal, world exhibitions has been to show Man's accomplishments expressed through architecture and design; to visualize his progress to the individual within the throng who attend such events. The manner in which Man's achievements have been displayed have undergone a considerable evolution within the past six decades. Designers now express their ideas through dynamic methods, seeking to attain and hold the interest of the spectator. They have found that sight-sound techniques for presentation proved to be unique and controllable media for their talents.

The Paris Exhibition in 1901 witnessed the birth of Cinema with the work of the Lumieres on display; in Paris again, Abel Gance utilized many screens to project his famed *Napoleon* at the Exhibition of 1937. Brussels, a couple of decades later, followed the earlier New York Exhibition with more innovations on the screen. And then came Seattle's Exposition another at Lausanne and the two years of the New York World's Fair with many techniques used to project Man's achievements and interests.

Expo '67 at Montreal next April will unveil "many new audio-visual methods which will change our concept of the Cinema" according to its spokesmen. "Spectators will enjoy new audio-visual experiences at the various thematic exhibits as well as in all of the participating nations' pavilions at this universal exhibition." These pages preview some of the many audio-visual innovations now under way; they will be supplemented and reported in detail in subsequent picture-text features.

71 nations will exhibit at Expo; pictured at left, top to bottom, are the Italian, British, Japanese and Soviet Pavilions. Soviet building will have a 600-seat theater. Below: sky-view of the heart of the Exposition grounds. In foreground, beside the seawall, is new Isle Notre-Dame with (at the bottom) canals, lagoons and gardens; this is site of pavilions of first importance.

EXPO 67, "The Universal and International Exhibition" which is the highlight event of Canada's Centennial celebration next year, will swing wide its gates on the man-made island in the St. Lawrence at Montreal on April 29. With that date just a bit more than six months away, the Editors of BUSINESS SCREENS have begun assembling the first of a series of comprehensive editorial reports on what promise to be the year's most exciting and technically valuable proving ground for audiovisual exhibition.

It is conservatively estimated that 50 percent of the industry pavilions at EXPO 67 will include films and other relevant audiovisual media.

A sizeable number of special theaters are being built for the showing of documentary and informational films.

A Festival of Canadian Films will be held in conjunction with the eighth Montreal International Film Festival (for theatrical films). The Canadian films will range in length and dimension (16, 35 and 70mm) and will be largely of a factual nature.

#### A "First Category" World Exhibition

Behind the entire planning of EXPO 67 is the very significant advantage enjoyed by this World Exhibition from the outset. It is the first "First Category" international exhibition ever held in the Western Hemisphere. The importance of that rating by the Bureau International des Expositions established in 1889 is obvious. More than 70 nations will be represented at Montreal. The New York World's Fair, (1964-65) not recognized by the Bureau International, wound up with only 42 countries exhibiting. The Seattle World's Fair (1962) was recognized by the Bureau, but given a "Second Category" rating.

While Canadian producers, with special note to Crawley Films' pre-eminence in this regard, are predominant in film production for the Centennial and EXPO 67, a sizeable number of distinguished talents from the U. S. and other countries are also involved. Walt Disney, Arthur Rank and Francis Thompson (producer of *To Be Alive!*, the hit film at New York) are a few of the names identified to date.

*International Trade Center at Expo: this pavilion will house the Business Development Bureau, sponsored by Chartered Banks of Canada. In this area businessmen of other countries can meet with their Canadian counterparts.*

*Interior view of the Du Pont of Canada Auditorium at Expo: it will be used for ambitious program of lectures, film showings and conferences related to the humanities and the pure and applied sciences.*

*Chemical Group Pavilion, sponsored by C.I.L., Chemcell, Cyanamid, Dow Chemical, Shawinigan Chemicals and Union Carbide. Visitors will see a "Kaleidoscope of Chemistry" thru films in three-dimensional color, presented in three chambers; accompanied by electronic, natural sound effects.*

Crawley's contribution includes a 1,200-seat, live-theater, 10-screen show for the Canadian Government Pavilion and other wide-screen show for the Canadian National Railway. The company's able and dynamic president, "Budge" Crawley, is also film consultant to the "Theme" Pavilions.

Francis Thompson has been assigned a six-screen color production to be made under the combined sponsorship of the Canadian Pacific Railway and Consolidated Mining and Smelting. It will have a Canada-wide "Youth" theme.

Bell Telephone of Canada is sponsoring a Techniscope film presentation of the Canadian scene which Disney will produce. A consortium of five Canadian steel companies has turned

to the Short Films Group of the Rank Organization for a film with the "working" title, *Man, Ruler of the Elements*. This subject is to deal with man's conquest of his environment.

#### Theme of Expo is "Man and His World"

Pursuing the main theme of EXPO: "Man and His World" are the 10 sub-themes which cover such subjects as Man and Life; Man and His Planet and Space; Resources for Man; Man and the Polar Regions; Man in the Community; and Man the Provider, to name a few. Within the separate Theme Pavilions devoted to each of these subjects, EXPO is sponsoring films to carry out the subjects.

For example: *Man and Life* will be supported by a complex of 15 "projections" which include films, loops and slides showing the de-

*Canadian National Railways' exhibit has cluster of geometric cells linked to a 200-seat film theater. Theme of "time and motion" will be developed by cells that exemplify time, while the 70mm color film portrays motion.*

## EXPO '67: AUDIOVISUALS

(CONTINUED FROM THE PRECEDING PAGE 45) velopment from the single primitive cell to the miracle of man's mind and body. Another theme subject, *Industrial Design*, will be presented in a 28-minute color motion picture to show man creating and seeking to rationalize his functional environment, seeking to make useful things beautiful according to their own innate logic and function.

A "Labyrinth" in the "Man and His World" area will have its own pavilion. This is being designed to accommodate the presentation of a new film concept, a "film experience" divided into three chambers. The first chamber has two vertical screens, one at the feet of the spectator and the other in elevation in front of him. The

Colin Low, director of the *Labyrinth at Expo '67*, helped direct such memorable films as *City of Gold* and *Universe*.

second is a mirror chamber through which the visitor passes to reach the last experience. This third chamber contains five screens in cruciform in front of the viewer. The audio factor is planned to play a major part as never before in film. This "film experience" is planned to analyse and synthesize in a dramatic way the story of man as "hero."

### "One Hundred Years of Canada" in Films

The Canadian Government Pavilion will present *One Hundred Years of Canada* as its most appropriate Centennial Year contribution. A myriad of screens will be used to show five short films; there will be wide-screen, vertical-screen and horizontal-screen projections, shown in separate halls and designed to be seen in sequence.

The Canadian Provinces, from the Atlantic to the Pacific, have all given pre-exhibition signals that films will be significant parts of their individual Pavilions. And, looking abroad, over 30 countries had declared their intention to use films in their EXPO Pavilions. Special forms of presentation, ranging from variants of Cinerama, Magic Lantern, multiple-screens, unusual ratios, ceiling projection, cinema-in-the-round and even three-dimensional projection by laser beam, would not be a surprising result at any of these imaginative international pavilions.

### Myriad of Audiovisual Techniques at Expo

The brief descriptive paragraphs which follow cover a myriad of other audio visual tools and techniques which the visitor to Expo '67 can hope to see. For example, numerous inter-

### Coventry Looks to Its Responsibilities:

## "CITY IN THE KINGDOM"

WRACKED BY WAR, Coventry Cathedral rose anew from the ashes and stands amidst this industrious English city as an edifice of faith which extends its influence far beyond the town's perimeter and, indeed, into many lands. There is a film about the new Cathedral, dwelling on its modern architecture. But today there is another motion picture taking its viewers into concerns of social significance which the clergy of Coventry express in words and pictures as challenging as they are beautiful. Its title is *City in the Kingdom* and within the 39 minutes of its time upon the screen there is deep consideration of the spirit of men in a modern industrial society, of today's youth, of international relationships, and of the role of the church in facing up to its own inner problems.

Produced by Random Film Productions and made possible by the aid of Shell-Mex and B. P. Ltd. (the same combination which gave us the award-winning film, *The Forth Road Bridge*), this color film is distinguished by the writing and narration of Christopher Fry. This noted playwright-author may have contributed one of the finest pieces of film writing in recent years. Readers may judge for themselves from the script lines reproduced in these pages. *City in the Kingdom* was premiered in Coventry Cathedral on October 10 and will soon have a series of American showings under the auspices of its Provost.

Imagery keynotes its treatment from the onset with an inter-mixture of factual documentary sequences which take the viewer into plants and offices, picking up the words of concerned persons. Industrial leaders gather in a Cathedral meeting room; young people change the beat of rock and roll into an inspiring chorale session and in an unforgettable moment from history, Berlin's Mayor Willy Brandt visits the ruins of Coventry, razed by Nazi bombers. Vicars of the Cathedral realistically discuss their problems at Retreat House.

Producer Peter Mills and director Shirley Cobham have given the world's religious groups an inspiring "message" film on the responsibilities of the church toward society and its future. Wilfred Joseph's music is as appropriate and beautiful as it is unobtrusive. The Ambrosian Singers, conducted by Marcus Dods raise their moments on the screen to inspiring heights.

Beyond the most gracious gesture of goodwill which made *City in the Kingdom* possible, the film has no commercial aspects whatsoever for Shell-Mex and B. P. Ltd. But like *The Forth Road Bridge*, its creation is a tribute to inspired sponsorship that will be recalled by all who see it.

The future is indeed bright for this kind of picture. It should be the exhibit centerpiece at Expo '67 in Montreal if the World Council of Churches plans to take part in that fair. •

### The Script by Christopher Fry as Narrated in "City in the Kingdom"

A city is built by men. It presses down on the earth like a weight of responsibility. It goes up towards the sky like ambition, or like an unanswered question. Once it was church spires which gave a city its skyline. Now more often the pattern of our horizon is made by factories, homes and offices.

• • •  
*"so work the honey-bees,  
 creatures that by a rule in nature teach  
 the act of order to a peopled kingdom".*

The plans are drawn up, the models are constructed, the theory of how our lives shall be contained is expressed, made visible. This is the city made by hands. This is the outward form of our lives, which we have constructed for our needs, so far as we can know and foresee them.

• • •  
*"When we build . . .  
 let us think that we build for ever"*

• • •  
*"Yard in the winding lane;  
 Lane in the broad street;  
 Street in the high town . . ."*

• • •  
 Light, God's eldest daughter, is a principal beauty in a building . . .

• • •  
 (Beside a window which looks out on to builders at their work, the editor of the Coventry Evening Telegraph talks of the craftsmanship of the city.)

• • •  
 Look how the hands contrive and make a new world for the body's sake. Moving like spider or like bird to weave and fly. More articulate than word. More expressive than the eye. So incomparably wrought.

...le and bone and nerve so knit,  
 ...the mind has scarcely thought  
 ...before the hand interprets it.  
 ...Come into the world, make our home there,  
 ...And adapt ourselves to new circumstances,  
 ...In new surroundings. We find a way of  
 ...living. Can that also be called a craft,  
 ...the making of ourselves?

• • •

...In the world I came, the barest chance  
 ...happened to be me".

• • •

...Or, what chance? And where do we belong  
 ...In this apparently incoherent flood  
 ...Of life that carries us from day to day?  
 ...The fragments torn from an abandoned plan,  
 ...Scattered along the pavements with the dust;  
 ...The reflections caught upon the glass  
 ...Which make their recognition and then pass.

• • •

...In the Council House of the city,  
 ...The Counsellors hold a Friendship meeting.  
 ...The themes of Friendship and the  
 ...Multi-racial society are constant in all  
 ...Their deliberations.)

• • •

...So many lives, so many fragments of life  
 ...Which brought together to make their meaning.

• • •

...What is a Church? Our honest sexton tells  
 ...Of this tall building, with a tower and bells.  
 ...A coherent life within  
 ...A coherent society within  
 ...A coherent world within  
 ...A coherent Creation.

...The reflections caught upon the glass  
 ...Which make their recognition and then pass."

• • •

...On each Monday morning the Provost of  
 ...The Cathedral meets with his staff.)

• • •

...And so the Cathedral breathes the life  
 ...Of the City, breathing in and breathing out;  
 ...The people entering into the Cathedral,  
 ...And the Cathedral going out into the City . . .  
 ...To be the City's industry . . .

...The Church not interfering in argument,  
 ...Acting as an ear which can hear God  
 ...Speaking through society to us for society.

• • •

...In the Cathedral Youth Club they are  
 ...Singing, contriving, improvising, and  
 ...Dancing, in movement and word, a  
 ...Representation of their world.)

• • •

...The searing flash of the world on our senses  
 ...The things seen and unseen, emotion and  
 ...Sensuousness, enjoyment, disturbance, acceptance  
 ...Rebellion, leap forward from a continuous  
 ...Thunder of lightning: Not clear as of day,  
 ...Each each thing distinct and cutting . . .  
 ...But yet it is day, is morning, is a tumble  
 ...Of sun, fire and shadow, contained  
 ...In a single spotlight, focussed on growing self.

(Outside on the Cathedral walls, is an image  
 of the struggle between good and evil)

"The sword of Michael, from the Armorie of  
 God,  
 Was given him tempered so, that neither keen  
 Nor solid might resist that edge: it met  
 The sword of Satan with steep force to smite  
 Descending . . .

. . . Then Satan first knew pain."

• • •

"Under the trees, by the untroubled waters,  
 In the beginning time of our lives  
 When the sound of the conflict is hardly more  
 Than the roar of bees in branches of lime-tree  
 Or traffic on the other side of the hill,  
 We turn and ask of the future

"How are we to comprehend you?"

"Dust as we are, the immortal spirit grows  
 Like harmony in music; there is a dark  
 Inscrutable workmanship that reconciles  
 Discordant elements, makes them cling  
 Together

In one society.

Wisdom and Spirit of the Universe;  
 Thou Soul that art the eternity of thought,  
 That givest to forms and images a breath  
 And everlasting motion not in vain  
 By day and starlight thus from my first dawn  
 Of childhood didst thou intertwine for me  
 The passions that build up our human soul."

• • •

(In 1965 the Mayor of West Berlin came  
 to visit the destroyed Cathedral.)

• • •

And in the city is a ruin,  
 Red stone, like a cooling fire,  
 And the tall shapes of windows,  
 Passages for the wind, looking  
 Neither out nor in,  
 Birdwings among their lapidary branches.

• • •

The International Centre was built by  
 West German students out of the stones of  
 the old Cathedral.  
 Another city of ruins, a city over the water:  
 Dresden, too, lay shattered in 1945.

And here - too, young men and women came  
 To help their one-time enemy -  
 This time England to Germany -  
 To build afresh in the place of destruction.

• • •

In the ruins stands the Sanctuary in which  
 is a cross made of charred beams from the  
 burnt Cathedral, and another of medieval  
 nails, symbols of reconciliation.

• • •

"The things to which the Cathedral is  
 being called to witness, under the charred  
 cross and under the cross of nails . . .  
 is that new kinds of relationships  
 are possible between man and man because of  
 a new kind of relationship established  
 between man and God through Jesus Christ."

\* \* \*

The eyes of men peep and peer,  
 Looking outward, looking forward.  
 Looking up to buildings rising  
 Like an unanswered question; seeing  
 The new estates: what new estate  
 Of human kind and human kinship grows?

\* \* \*

(In the village of Offchurch . . . miles  
 from Coventry, is Retreat House. From  
 time to time the Vicars spend two or three  
 days together at Retreat House, away  
 from the noise and business of the city,  
 Where they can pool their experiences and  
 thresh out their difficulties, questioning  
 themselves, exploring their thoughts,  
 feeling their way towards how our frag-  
 mented society can best be reconciled and  
 the whole nature of man fulfilled.)

\* \* \*

Under the thrumming, the blare of the city,  
 Sounds cacophonous, dissonant, jarring,  
 a hidden harmony stays to be recovered,  
 As under the crested pitch-battle of the seas  
 Deep down the gold is lying, the old treasure,  
 Or, taking the soundings of dark carth,  
 Spring uncovers a concord, the buried music;  
 A theme proposed in the ground, discussed  
 In variation by bird and daffodil,  
 And taken up at last among the branches  
 So all the rivalling sounds of human life  
 Are reconciled in music.

"La sua voluntate nostra pax.

Thy will is our peace.

Thy kingdom come. Thy will be done on  
 earth . . ."

"City in the Kingdom" Comes to America

The first American showing of *City in the Kingdom* will take place on Sunday evening, October 30, when H. C. N. Williams, Provost of Coventry Cathedral, brings the picture to Christ Church in Winnetka, Illinois.

This suburban Chicago church has served Coventry during its rebuilding years and a presentation ceremony (at which the Provost will officiate) takes place at morning services which precede the evening showing. Arrangements for the projection have been made by Midwest Visual Equipment Company of Chicago using new Bell & Howell equipment.

# They Stand as Equals Before God

A Film Reports the Struggle for Inter-Racial Harmony as Omaha's Augustana Lutheran Church Faces the Issue

A RACIAL DISPUTE involving the members of a Lutheran church in Omaha has been documented, as it happened, *cinéma vérité* style, in a new film sponsored by Lutheran Film Associates, of New York.

*A Time for Burning*, produced by Quest Productions, New York, was previewed by 800 members of three churches which figured in the film, at a showing in the Omaha Civic Auditorium on Sept. 15. The 58-minute film, which cost \$100,000, portrays the struggle to establish meaningful communication amidst tension — not that wrought by violence and exploding emotions, but rather the clash of ideas, the anguish between doubt and conviction, inaction and action.

The cameras dwell mainly on the group that belongs to Augustana Lutheran Church, a middle-class, all-white congregation. The location of the church is only a few blocks from the Negro ghetto. The neighborhood near the church is beginning to change with the start of integration.

## Challenge to the Congregation

The Rev. William Youngdahl, a pastor with a zeal for improving human relations, especially among the races, has been the spiritual leader of the church less than a year. As he sets forth his ideas in sermons, talks and counselling sessions with his people, he tries to challenge them to social action.

The inertia among his flock is not the only source of his frustration. He seeks out the leaders of the Negro community, as well. In a confrontation with one of the most articulate Negroes in Omaha he meets, head-on, the spirit of "black nationalism" with its bitterness and rejection of the white man, including the white liberal like himself who wants to effect a reconciliation. The Negro spokesman, Ernest Chambers, is a

barber and Pastor Youngdahl is the target for his hostility and pointed accusations in an attempted dialogue in the barber shop. "Your Jesus is contaminated," Chambers says, "you can have Him."

## Inter-Racial Visits Proposed

As "the man between", the Pastor nevertheless tries to spur the social action committee of his parish into taking a first step in communication and understanding — an informal, inter-racial visitation program in homes — which he considered essential for a subsequent extension of a ministry to all the people in the area. Ted Backstrom, the committee chairman, a young attorney, catches the spirit and drives for a decision. Ray Christensen, on the other hand, is cautious; he has doubts as to a positive response among the church members, some of whom have warned that "a forced integration could split the church wide open!"

Pastor Youngdahl visits the home of a Negro dentist who lives near Augustana Church. Dr. Earle Persons and his wife are members of Hope Lutheran Church, which is almost all Negro located in the ghetto. The dentist applauds the leadership Youngdahl is trying to give, but warns that other clergy in Omaha with similar programs of inter-racial action have been forced to resign their pulpits.

## Pastor Tenders a Resignation

After sensing that his ecclesiastical superiors and clergy colleagues disapprove of his strategy, although not his program, Pastor Youngdahl meets further resistance in his attempt to broaden the outreach and ministry of his congregation. He concludes that "people are staying away from church because they no longer want to hear what I have to say," and he resigns.

This triggers a full-blown con-

trovery among the members of the church. Ray Christensen, who has recently had his "baptism of fire" in a dialogue-confrontation with Negro leaders including Mr. Chambers, the barber, and Dr. Persons, the dentist, has realized that the posture of his fellow church members, which he previously had tried to defend against attack, was really untenable. He suddenly has caught a new vision of what the church might be, if the faith that its members professed could really be applied to the situation he feels is so urgent.

Christensen's moment to speak comes in a special meeting of the congregation called to discuss Pastor Youngdahl's resignation. He engages the Synod President (equivalent to a bishop) in a debate on the "burning question" for the church: how to extend their ministry to include Negroes without rupturing the fellowship in the process. Christensen insists that the time has come for Christians to take their stand.

We see two groups of Christians, one white and the other Negro, worshipping at their respective altars but participating separately in the sacrament of

"communion" in which they are supposed to be united. A song at first plaintive and then becoming more intense, is heard as a contrapuntal message of hope in the midst of this struggle: "There is a power in me somewhere — let me set it free!"

It Was Filmed by William Jersey

*A Time for Burning* was filmed by William C. Jersey, with script by Barbara Connell. It was produced by Mr. Jersey; Robert Lee of Lutheran Film Associates was Executive Producer. Situations in the film showing persons and groups reacting to social change were entirely unscripted and unrehearsed.

Preview audiences have described the film as "shattering," "brutally honest", and "eccegetic." It is scheduled for nationwide TV showing on the night of October 17 by a 105-station network of National Educational Television.

Now Available for Group Rental

It will be available to cities, schools, churches and discussion groups on a rental basis starting in November through libraries. Contemporary Films in New York, San Francisco and Evanston, Ill.

# A Film Documents the Spirit of Mutualism

*In Common Cause*, a 22-minute film documenting the spirit of mutuality that has guided America from infancy, has been released for showing to civic, educational and service organizations by the John Hancock Mutual Life Insurance Company.

The film explores the concept of self-help through mutual association, which was the hallmark of the early pioneers, from the building of frontier schools to the modern mutual life insurance companies of today whose premium dollars are the mainstream of the nation's growth and economy.

Filed in color, the documentary spans about 100 years to the present-day era and makes extensive use of still photographs to illustrate the challenges that have led to the successful pooling of human talents and resources for mutual benefit.

Included in the film are early photographs from the United States Library of Congress documenting the westward movement, as well as unusual photographs of several national disasters including the Boston Fire and the Great Flood in Denver.

The film records the parallel

Montana school days: 1893

evolution of the life insurance industry, showing how efforts by families to gain security by sharing risks with their fellows gradually created a giant pool of investment capital.

These funds, in turn, pumped into the nation's economy to finance solid growth that created jobs and increased purchasing power, which in turn triggered new investment opportunities for further growth — an evolutionary process that is the backbone of this nation's strength and well-being.

*In Common Cause* was produced for John Hancock by Genheim Productions, Inc., of St. Louis. It is available for showing to interested groups through local John Hancock offices.

"His church has to take its stand" argues Omaha Lutheran layman Ray Christensen in the scene that climaxes the film, "A Time for Burning." Listening are Dr. Ruben Swanson, Nebraska Synod President, Dr. Merle Spogren, council member at Omaha Lutheran church.

# The Knights Accept a Challenge

Members of the Knights of Columbus in Real-Life Roles  
As a New Film Reveals Their Services to the Community

THERE'S AN EARLY SEQUENCE in a current Knights of Columbus color film in which narrator Frank Blair delivers some comfort words that might lead members of his fraternal organization to go forth with contentment at their lot in life.

"Yes, there is good—much good in this world. And it seems that the more a man is rewarded, the more he is in triumph over all that he has. Abundance and plenty fill his eye. His is a world of comfort and delight. His material blessings are many."

"They Enjoy the Good Life . . . Visual sequences underscore the meaning of words as well-dressed couples parade along New York's Fifth Avenue and scrubbed, well-to-do children play in Central Park. There's a swift change to hard reality.

"But some are left behind," the narrator reminds his audience. And it is shown that "some" includes youngsters playing with marbles in a slum. "The material blessings are not universal. There are by-products of poverty and immorality. There are social problems that cry out for answers. A rising tide of immorality and secularism presents a challenge to us all, to us Catholics, to Christianity. A challenge that must be met."

**Another Side of the Picture**  
And the visuals on the screen suddenly become very real, near at hand. A derelict forages in a garbage can, children "try" marijuana, chased by a squad car. "Personal concern is not enough," says the voice, "all of the problems in the community, all of the good in man must respond."

Blair concludes: "The Knights of Columbus are dedicated to meeting this challenge. In the spirit of Christian charity, they work to answer the needs of the body—and the needs of the spirit."

### Meeting Their Responsibilities

The work of that organization in meeting its responsibilities to society is the basic theme of this 27-minute color film, *The Papal Challenge*. Produced by Audio Productions, it draws its title inspiration from the "winds of change" blown through the world's Catholic community by the historic decisions reached at the Vatican's recent Ecumenical Council.

The historical background of the Knights of Columbus are told in a series of flashbacks by a veteran member, and today's outward look toward changing problems of life as seen through the eyes of his member son. These add up to an impressive survey of the organization's activities and achievements.

### How the Knights Are Serving

From the time of its establishment by Father McGivney (in New Haven, Conn., in 1882) as a fraternal benefit society that would care for the widows and orphans of its members, this story of the Knights covers their religious, community and patriotic activities. Youth programs, scholarship and charitable activities, credit bureaus, hospital banks, hospital bed funds, insurance, parent-school participation programs and ecumenical activities which involve other religious groups within the community are pictured as double strands of history and of the future are creatively interwoven in the provocative filmic fabric.

His Holiness, Pope Paul VI, bestows a personal benediction upon the Knights of Columbus . . .

Two examples are noteworthy: an Arizona sequence showing Indian boys playing basketball in a K of C-sponsored youth program

Youth activities: "in the spirit of Christian charity, they work to answer the needs of the body — and the needs of the spirit."

its "cast." As Audio's producer-director Hans Mandell explains: "non-professionals are the best actors when they're playing themselves."

*The Papal Challenge* reaches its climax with a message to the Knights from His Holiness, Pope Paul VI, filmed at the actual Vatican ceremony in which the Pope bestowed his personal benediction upon the society. In these scenes, the Pope's traditional, sacerdotal ceremonial dress appears to contrast with the garb of Catholic laymen in their modern dress. In this moment of contrast, the film achieves its symbolism and brings together the past and the future, age and youth, the worldly and the spiritual values that are woven into the fabric of the Knights of Columbus.

### Film Has Been Well-Received

Not only a stimulus to renewed membership interest, the picture has been well received by community leaders of all faiths. This awareness of today's social needs has stimulated wide interest among local groups. Showings are being arranged by Knights' groups who have acquired their own prints to meet these booking requests. •

and another showing the interviewing of participants from all over the world who have joined in The Knight's program for training in social leadership at St. Francis Xavier University at Antigonish, Canada.

### Real People Live Their Roles

Filmed in five states, in Canada and in Rome, *The Papal Challenge* makes good use of real people as

past and future of the Knights of Columbus symbolized by these father and son members.

"There are social problems which cry out for answers" to be met by youth activity programs

"Opening outward toward changing problems of modern life" they look to needs of our times.

"Be with you in just a moment, sir" At least where there's life, there's hope

## Service Men Learn to "Love Thy Customer"

A New Ford Film That Points Up Enlightened Self-Interest Is Helping Service Personnel Greet Car Owners With Smile

THE CAR OWNER who has achieved his goal in the sales department of his dealer soon turns up in the service shop. His need may be minimal—periodic check-ups that put him back behind the wheel quickly, purring with content. But there are times when owner Jekyll becomes the proverbial Hyde seeking for a victim. Automotive service people have discovered the tangs and claws of a tiger on otherwise mild-mannered ladies and gentlemen.

In their Marketing Institute Schools, the Ford Motor Company has anticipated the problems of service department men in

Ford, Mercury and Continental dealerships and with a timely "attitude improvement" film aptly titled *Love Thy Customer* they have provided the armor of understanding to cope with the irrational, the illogical but otherwise irrefutable foibles of the man whose car needs fixing . . . now! Through the medium of the screen, the Service Man will be encouraged to find that Dearborn understands his problems.

That is the mission of this Parthenon-produced 26-minute color film and it has been carried out with clear understanding of both sides of the service problem.

There's straightforward *self-interest* at work in the content of *Love Thy Customer*. It says *this way* can lighten your workload, protect that steady paycheck and make life much more pleasant without those angry customers.

The film does this with the "light touch" found in earlier Parthenon films for Ford sales training use. But the laughs are indigenous, help make message points, move the film a bit faster and aid its memorability. To accomplish this, the picture turns to Frank Nelson (Jack Benny's familiar "floorwalker" as its basic narrator.

In some 20 featured sequences, they meet Bilko the Chiseler, Go-Go the Gabber, Short-Fuse Fred and Einstein, the Expert as well as some good "white coat" types from within the Service Department. Of course, there aren't too many like these in real life. But the few who exist are enough to shorten a Service Man's life.

In synch dialogue discussion that concludes this useful "attitude" film, the Service Manager lays out the "cures" that can be summarized in a single phrase: "do it right and you do it once."

And in all this, there's emphasis on friendliness, patience and honesty. The beneficiary of the film is the Service Man but the real winners are Ford customers who will find men with understanding hearts at the service desk or beneath the frames of their cars in that time of need. •

**New Uses for Concrete Show in Film for Architects and Builders**  
 ☆ A 16mm, color sound motion picture depicting new uses of concrete has been completed for architect and contractor audiences by Fraser Productions, San Francisco and Hollywood film company.

Entitled *Concrete*, the film was produced for its sponsor, Kaiser Cement. It compares the functional requirements of natural elements, such as plants, scrub birds, and sea-worn rocks and relates them to the utility and design of modern architecture employing concrete as the building material. In addition, a "gallery sequence" of completed buildings of special architectural significance, *Concrete* also explains new construction methods such as tilt-top, slip-form, unitite, thin-shell and lift-slab.

Kaiser Cement's agency, to whom the Fraser staff worked during the production of the film, is Allen Dorward & Scroggin, San Francisco, AD&S supervisor, handled by creative director, Charles Medtheny.

\* \* \*

**Bureau of Mines Updates Film on "Arizona and Its Resources"**

*Arizona and its Natural Resources*, a new color motion picture showing how the conservation principle has contributed to the development of a western state now available from the film library of the Interior Department's Bureau of Mines.

Sponsored by the Phelps-Dodge Corporation, the film shows the wisdom and skill in utilizing natural resources have changed Arizona into an area that is rich in agriculture, industry, science and the arts.

The advancement of the technology that has made Arizona lean ores a major source of energy for the nation is depicted in the film. State universities and extension services and their contributions to conservation through research are portrayed in scenes of scientists experimenting with techniques in forestry and agriculture.

Prints of *Arizona* can be obtained from Graphic Services, Bureau of Mines, Department of Interior, 4800 Forbes Ave., Pittsburgh, Pa. 15213. Prospective borrowers should affirm that they have available a 16mm sound projector and experienced operator.

Coming! the '67 Buyer's Guide to Film Production Services.

"Harvey, the Hood-Looker" enlists the aid of a suffering mechanic

"Short-Fuse Fred" won't stand for any back talk from anybody today.

"Go-Go, the Gabber" has plenty of time, even if service men don't.

"Einstein, the Expert" — he's ready to tell the mechanic what it needs.

"Beeper, the Chiseler" he knows he's out, that must cost less

"Don, the Instant Screamer" has a lot in common with that loud duck

## IFPA Directs Science Theater at WESCON

Present and Present 29 Pictures at Western Electronic Show

THE SECOND ANNUAL "Science Film Theater" at the recent Western Electronic Show and Convention (WESCON), set up in the Hollywood Park exhibit area for a huge gathering was managed by IFPA this year.

The association responded to an invitation from WESCON under the leadership of our past-president Dr. Harold Denforth. IFPA solicited film from all eligible companies and organizations. Members conducted preliminary screenings and supervised the final selection of 29 pictures shown in the theater.

Showings were continuous during a four days of the convention. In one year there were more than 100 people officially registered and there were over 1,200 exhibit booths. It was an excellent show-offer for the Industry Film Producers Association to display their diverse talents and to promote the organization, as well.

Show management provided the location with a booth at the entrance to the theater and everyone who received an IFPA brochure, membership application and program piece which also described IFPA's contribution toward cooperation of the Science Film Theater. Titles and showing times are provided in this paper.

Each morning and afternoon screening session was also preceded by the showing of an IFPA "commercial" produced by Dan Downer, our first president. The films of the 29 on the show-

Pictured at Science Film Theater are (l to r): Harold Joberg, product design engineer for National Cash Register Company's Electronic Division; Gene Huggens, president of IFPA; Joe Joberg, father of Harold and projectionist Danny Egan.

ing schedule were 1966 "Cindy" award winners and special film clips calling attention to this honor preceded these on the screen.

WESCON officials announced at the close of the convention that they were so gratified by IFPA's efficient handling of the Science Film Theater that they would like to have the affiliation continued at the 1967 convention in San Francisco. The association's booth was manned during the four busy convention days by Roy L. Deets, your editorial vice-president; Dan Downer, our first president; and by Rocco Lanzo, chief pageboy at the Hollywood Park and Santa Anita racetracks. Rocco is a master of crowd-handling technique! •

## Two Informative Meetings at Los Angeles

REGULATING MEETINGS of the Los Angeles Chapter during August and September attracted many new faces to these sessions, adding a new dimension to the association's growth outlook.

Chapter members and guests met at the home of Eric Berndt, inventor and maker of motion picture equipment, for a demonstration of one of his latest projects, the Multitrax Projection System for 16mm films. This system, recently introduced by Cinestar International, records and reproduces five separate sound tracks on a single 16mm film print. In other languages and/or levels of projection are recorded, each on an individual sound track. As the

film is screened, the audience hears only the sound version appropriate to them as selected by the projectionist.

Simultaneous playback of all tracks is also possible via ear-phones for mixed groups of various nationalities or with different educational backgrounds.

The September meeting was again held at a familiar site: the Cinesound studios of our good friends: Rose and Austin Green. This session was aimed primarily at the many independent film people affiliated with IFPA and appropriately titled: "How to Make Money in Business Motion Pictures."

A very capable panel of adver-

# IFPA JOURNAL

## Chapter Members Take Active Part in San Francisco's Film Festival

Since the inauguration at the San Francisco International Film Festival of the "Film as Art" and "Film as Communication" programs, Northern California Chapter members of IFPA have been closely identified with these competitive events. Each year has brought more of the association's members in the Bay City area into key roles, working toward improving these events and increasing their influence.

At the 1966 Festival, both Ray Jaeger, former executive vice-president of IFPA, and Dick Fowler, vice-president of Vista Productions, are serving on the Board of Directors. Jim Halverson served as competition chairman for the "Film as Art" and "Film as Communication" programs. Vin Agar, Jim Goldner, Larry Filby and Ray Hollingsworth of IFPA functioned as jury chairmen. Many other San Francisco-area members served on pre-screening juries. •

## Lt. Colonel Peter Boyko Retires; Major Albers Commands 1350th

At ceremonies held on August 31, Lt. Colonel Peter Boyko handed over command of the 1350th Motion Picture Squadron, Aerospace Audio-Visual Service (NAC) at Wright-Patterson Air Force Base to Major Lawrence C. Albers.

Before coming to Wright-Patterson, Major Albers attended the

Lt. Colonel Peter Boyko (left) pictured with Major Lawrence C. Albers at Wright-Patterson ceremonies.

University of Southern California, where he received his Master of Arts degree in Motion Picture Sciences under the AFIT Program.

Well known to Industry Film Producer Association members, Colonel Boyko has retired after 24 years of dedicated service. The colonel is remembered for his excellent talk on Air Force motion picture requirements and operations at our 1964 National Conference.

We understand that "Pete" Boyko will be spending a good part of his time now at his home in Florida. We wish him the best of boating and fishing and a speedy return to some active work in the field he knows so well! •

craman from 1928 to 1940, when he enlisted in the Army Air Corps. While serving as a combat photographer in the European theater, he earned a combat commission in 1943. Landing at Hiroshima less than a month after the atomic bomb drop, McGovern (then a motion picture producer), filmed documentaries of the effects of the bombing on the Japanese people there and in Nagasaki.

Later assignments included those of Photo Project Officer for the Atomic Energy Commission's test programs in Nevada and the Marshall Islands. He also headed the Documentary Photo Element for

Joint Task Force Seven's atomic tests in the Pacific. In 1958 he was sent to Vandenberg Air Force Base to organize a specialized technical photo facility for instrumentation and documentary photography of ballistic missiles, space systems launchings and tests.

He retired with the rank of Lt. Colonel in September, 1961, after 21 years of active military service, all in the field of photography. McGovern is a member of five professional photographic societies and resides, with his family, at Northridge, Calif.

Gene Lemon has been named as new chief of the photography branch at Edwards AFB. •

**Meet IFPA's First President: Dan Downer**

**I**N THIS TENTH ANNIVERSARY year of the Industry Film Producers Association, the spotlight is appropriately turned on the man who won the approval of our founding members to become IFPA's first president: Daniel B. Downer.

Although it wasn't easy to get Dan to divulge many of those "vital statistics" we do know that he attended Bowdoin College and was graduated from Pomona College in 1941 with a B.A. degree. Answering the call to military service in World War II, he soon found himself stationed at Ladd Field in Fairbanks, Alaska.

**Dan Discovers a New World**

Did a career in the film business begin here? As Dan tells the story, while conducting information-education programs on the base, he got "hooked" on the smell of film stock and decided that here was a great potential for the civilian world. He was only slightly chagrined when he realized later that a good many people had made the same discovery a few decades before.

In 1946, on his return to Los Angeles, Dan Downer determined to get a solid grounding in the film business. He tackled nearly every phase—salesman, grip, writer, gaffer, truck driver, production management, direction and even set decoration, separately and concurrently. He was usually able to make a full time living in the process.

**Joins Northrop Missile Division**

Following posts with Frederick K. Rockett (one of the industry's early pioneers) and Masten Pictures in Hollywood, Dan joined the audiovisual section of Northrop Aircraft Missile Division and was

IFPA pioneer: Daniel Downer

later transferred to that company's motion picture activity. Late in 1953, he moved to the Aerojet-General Corporation facilities in Azusa to head the motion picture program.

It was during this active period in the defense industry that the need for an association of "in-plant" production people became obvious to many of its a-v principals. First exploratory "get-togethers" were held at the Palms Restaurant on Hollywood Boulevard. We're not sure whether those long hours of discussion with minimal food checks led to the Palms' eventual demise but that was the birthplace of IFPA!

**Those Who Shared the Vision**

Recalling those early days, Dan Downer remembers many of the people who took place in those formative sessions: the late Jay Gordon of Autonetics; Bob Gunther of North American Aviation; Ralph Hall and Eugene Keefer of Convair; Julian Ely of Lockheed; Gene Burson, then with Hughes Aircraft; Bob Scott, William Gibson and Jack Gabrielson, of Douglas; Jack Smith of Ramo-Wool-

dridge; Betty Jane Williams; Ken Brown, Phil Carpenter, Frank Ashe, and many, many others whose names have appeared through the years in these *JOINT* pages.

This talent-loaded, outstanding group of people were the precursors of IFPA. They chose Dan Downer to lead them through their first trying year of organization and planning for the future.

**Now Heads Own Film Company**

In 1959, Dan left Aerojet-General to form an independent film company in partnership with the late Dick Bisbee. For the past three years, he has headed his own Hollywood company for the production of business films. Looking ahead to the future of IFPA, Dan says:

"With the expanding investment and activities of IFPA in the various facets of the film industry, perhaps we'd better call it the 'communications industry', renewed interest has been generated in this organization.

**Looks to Worldwide Ties**

"I anticipate that within the next 10 years, IFPA could become a solidly-based international organization. There are many useful and significant functions and services that our organization can provide to a rapidly-increased number of filmmakers throughout the world, and the overall advancement of the craft."

We'll be looking to Dan Downer for help in realizing those objectives during the coming decade.

**"New Paths to Learning" Systems Approach to Aid College**

☆ A 15-minute color film which describes a "systems approach" to higher education has been released by Litton Industries. The new *New Paths to Learning*, shows how this approach is being used at a newly-established Michigan college and points out that it is designed to gain maximum student and teacher time at a lower cost per pupil.

By 1970, more than half of the U. S. population will be between 18 and 28, notes the film. Another that year, applications for college admission are expected to increase by more than 50 per cent.

Bookings can be arranged through the Motion Picture Services Department, Litton Industries, 9370 Santa Monica Blvd., Beverly Hills, Calif. 90213.

STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

a-v marketer, David Ubel

### Ubel to Manage A-V Marketing for Revere-Mincom Division, 3M

The appointments of David B. Ubel as marketing manager, audio-visual products, and of Wilber F. Jensen as marketing supervisor, educational markets, audio-visual products have been announced by D. H. Boyd, general sales manager of the Revere-Mincom Division of the 3M Company, St. Paul, Minn.

Ubel will develop sales and marketing programs and coordinate product planning of audible range and video tape recording equipment for a-v markets. Jensen's new responsibilities include development of marketing programs and coordination of product planning involving educational institutions. He will report to Ubel.

### Roland Gehl to Serve as Field Sales Manager at Da-Lite Screen

Roland H. Gehl is now serving in the newly-created post of field sales manager for the Da-Lite Screen Company, Inc. Until his recent appointment by C. J. Cerny, vice-president, sales, Gehl was midwest district sales manager.

field manager: Roland Gehl

He will be based at the company Warsaw, Ind. headquarters office and plant.

Martin N. (Marty) Olson of Elgin, Ill. has been named to fill Gehl's post as midwest manager.

### Sunnucks to Direct Photography; Smith 8mm Promotion at B&H

The Bell & Howell Photo Sales Company has announced two important appointments, both made by president Carl G. Schreyer:

James E. Sunnucks has been named director of photography, reporting to the director of advertising and sales program. He will direct all photographic activities of the Photo Sales Company. Sunnucks has had 18 years of professional photographic experience in the major appliance field and many of his illustrations have ap-

photo director J. E. Sunnucks

peared in leading national consumer publications.

Warren J. Smith, a veteran of 20 years' experience in sales promotion, will serve as sales promotion manager for 8mm motion picture products. Smith was most recently a sales promotion manager in the major appliance field.

### Bill Stokes Associates, Dallas, Names Three to Top-Level Posts

Bill Stokes Associates, Inc., Dallas, Texas, has confirmed three staff promotions: John Beasley, former associate producer, has been named vice-president-producer. Robert B. Boeye has been named art director and Marshall Riggan has moved up from staff writer to writer-director.

Before joining Stokes' organization, Beasley was animation director for Ling-Lemco-Vought, Inc. from 1963 to 1965.

### Treiberg Directs Sales for Cahill

The appointment of Ed Treiberg as national sales manager for Charles Cahill and Associates, Hollywood, has been announced by president Charles Cahill. He recently associated with McCullough Hill's Text-Film Division.

### Haycox Photoramie, Norfolk, Va. Elects Hamblin Executive V.P.

Ernie B. Hamblin has been named executive vice-president and a member of the board of Haycox Photoramie, Inc., Norfolk, Va.

Haycox executive Ernie Hamblin

He will be in charge of all operations of that company, according to president George B. Haycox.

Another top-level appointment at the Norfolk studio brought Taylor B. Lewis the post of vice-president in charge of national accounts for the company's Still Picture Division. Lewis also joins the Board of directors.

### Robert Mayerson Named Director of Marketing at Graflex, Inc.

☆ Robert S. Mayerson has been promoted to director of commercial marketing at Graflex, Inc. In confirming his appointment, Robert L. Rice, president of the General Precision Equipment subsidiary, noted that Mayerson has assumed full responsibility for all commercial marketing activities of Graflex and will direct domestic and export sales, sales promotion, customer and sales services.

The new marketing director first served as sales manager and was most recently the company's director of domestic sales.

### Van Winkle to Direct National Sales of Photo & Repro Division

☆ The Photo & Repro Division of General Aniline & Film Corporation has a new national sales manager for its professional products. Robert C. Van Winkle, western regional sales manager for repro products since 1962, will headquarter at GAF's corporate offices in New York City. He joined the company in 1951.

"Jack" Price Elected President of Vogue Film Productions, Inc. ☆ Edward A. "Jack" Price is the new president of Vogue Film Productions, Inc., Louisville, Ky. His election by that company's owners fills the vacancy created by the death of Hal Vinson, late president and founder of the firm, which was organized in 1950.

Price joined Vogue in January 1965 as vice-president and general manager and has also served as associate producer on specialized film projects. Prior to his association with this studio, he was a-v director at the Studebaker Corporation, South Bend, Ind. for 18 years.

Gretzler Joins Account Executive Staff of Wolper Industrial Film Division ☆ Wolper Productions' Industrial Film Division has added Norman T. Gretzler to its account executive staff. It has been announced by Mel London, vice-president and head of the recently-established division.

A veteran broadcast/film industry executive, Gretzler was formerly with JLN Productions, Inc., where he was secretary, treasurer as well as a writer, producer and director. Previously he was budget director and producer director at On Film. He also served with Ketchum MacLeod & Grove for a five-year period, and with the National Broadcasting Company for 10 years.

### John O'Malley Named Manager of Colburn Processing Department

☆ The new manager of the Processing Department at the Geac Colburn Laboratory, Inc., Chicago, is John O'Malley. A former member of Eastman Kodak's quality control and processing de-

processing chief: John O'Malley

partment, O'Malley joined the Colburn organization in 1960. In his new post, he will be actively engaged in training new personnel in the department as well as scheduling and operational duties.

a portable 16/16  
**"TRAINING  
 CENTER?"**

MODEL 2000 16/16

SIEMENS 2000 16/16 projector  
 from 16mm magnetic deck side.

## SIEMENS SIXTEEN/SIXTEEN

Yes! The Siemens 2000 16 16 is a portable projector that can provide your training program with all the flexibility and capability of double-system sound. It's a fine optical magnetic sound projector, mechanically interlocked with a 16mm magnetic deck. Whether used as a single-system or a double-system, this unique machine provides theatre-impact performance. For training programs, the versatility of the Siemens 2000 16 16 is practically unlimited—it makes single-system or adaptable double-system sound, fast, easy and inexpensive.

Record, re-record, playback—make effective sound tracks for workprints, or original camera footage—make one sound track or several—you can do them all on the same machine. For instance—you can have a sound track for Engineering and another for Production—one for the old timers and another for student beginners. And, because changes are quick and easy, your sound track can be as up-to-date as "tomorrow."

Because the Siemens 2000 16 16 is portable, you can put it to work in your studio—or on the run—in office, plant, classroom or wherever. Whether it's to be your only projector or supplement to existing equipment, this versatile machine is the time saving, money saving answer to dozens of training film problems. WRITE FOR COMPLETE INFORMATION.

**ARRIFLEX** CORPORATION  
 OF AMERICA

25-20 BROOKLYN-QUEENS EXPRESSWAY WEST  
 WOODSIDE, NEW YORK 11377

Two generations at Laboratories Vitfer: Emile Leze (at right) has been joined by his son in the operation of this modern Paris laboratory.

## The New VITFER Laboratory

This Film Center at Issy in Paris Was Designed for Speed & Quality

THE RECENT OPENING of a second and completely new Vitfer film laboratory at Issy-les-Moulineaux, 47 avenue Victor-Cresson, in the environs of Paris, has given this specializing, custom film processor two of France's most complete work centers and is helping to meet its growing volume of work on behalf of sponsors, television networks and government agencies.

Vitfer's new Issy plant was designed and built "from the ground up" to continue the speed of service which has attracted a clientele from all over Europe and a number of U. S. affiliations. Not only "same day" but "within hours" service is now making possible the screening of 16mm Ektachrome "rushes" almost immediately after shooting. This has become especially important in tv.

While Vitfer's first plant in Paris continues to serve industry, the new complex at Issy has some unusual new machines: the most recent Debric processing equipment, for example, handles development of Ektachrome and of Eastmancolor 16mm negative-positive. Picot equipment backs up the sound department with

a new installation for both optical and magnetic sound transfers.

Automation and electronics both play a part in assuring quality control at all stages of lab operations. And a well-equipped quality control laboratory, with the latest measuring devices, provides the essential sensitometric and chemical checks necessary for constant, flawless production of color and b & w prints.

Vitfer's new Issy plant, headed by Emile Leze, is the outgrowth of over three decades of experience. It has a "second generation" of leadership coming along since M. Leze's son has taken an active role in the lab. Visitors from the U. S. within recent years have had a profound influence on this plant's design.

Services of Vitfer include: developing and processing of 16mm color and black & white negative and positive films; focal-length positive 16, 35mm Eastmancolor advertising films and special effects for both color and black and white 16mm films.

While speed is a client-oriented service advantage, Emile Leze continues to emphasize custom-quality and precision as Vitfer's basic goals. The meticulous appearance of this shining new lab underscores that premise of perfection which it was designed and built to provide to the film producer and sponsor.

Today's narrowing boundaries and a growing amount of worldwide film activity puts the spotlight on overseas production and processing facilities. We begin a new series with this visit to a modern film lab in Europe.

Picot equipment has been installed for optical and magnetic sound transfers at the new lab.

This Debric printer will soon be supplemented by a Bell & Howell printer now being built.

Ektachrome and Eastmancolor 16mm prints are processed on this special Debric installation.

Sensitometric and chemical control checks are constantly made to assure quality of printing.

Chemical tanks deliver measured quantities of ingredients to the lab's processing machines.

Mr. Leze's son is pictured at controls which assure proper balance in supply of chemicals.

## EIPO '67: AUDIOVISUALS

(CONTINUED FROM THE PRECEDING PAGE 46)  
National exhibitors expect to employ a-v in the national pavilions in Montreal.

France will present *Panrama*; in this exhibit a single projector will beam its images through the top of a circular ceiling to a concave mirror below. The mirror will reflect these images on the circular ceiling above at an 180-degree angle. This principle was used at the Brussels Exhibition in 1958.

Great Britain will use 69 projectors for its national pavilion exhibit; Czechoslovakia will present a "film mosaic" on 50 screens. The Canadian Government Pavilion will feature a theme exhibit using five projectors with special Kodakorgon 35mm lenses. Canadian Industries Limited will have Kaleidoscope Pavilion shows, using three projectors and mirrors for a most interesting audio-visual experiment.

**Audiovisuals for Expo's Theme Exhibits**  
Some of the details of the Theme Exhibits for Expo '67 are worth noting. The exhibit, "Man and Life;" produced by Barry McLean, will be "audio-visual" and totally integrated by means of 16 and 35mm color projection using short motion pictures of varying lengths.

The theater area for "Man and Planet" will use a film titled *Earth is Man's Home* which will be projected on a vertically-oriented wide-angle screen 45-feet high and using 70mm Technicolor images. Producers Nick and Ann Chaparos say that the "combination of juxtaposed screen positions, combined with stereophonic sound emanating from each individual source should give the presentation impact."

**Dramatic Experiences in the Polar World**  
Within the Theme Area: "Man the Explorer," producer Graeme Ferguson plans to use a number of loop films projected on numerous screens to show *Man and the Polar Region*. A carousel effect will be employed (moving anti-clockwise to give more impact) to provide a dramatic experience in the polar world.

Four films will help illuminate "Man and the Ocean" as producer Mario Galloppini uses audiovisuals for the aquarium and penetration of the sea, and again in the "exploitation" area. Four color films with stereophonic sound on four channels is to be provided.

**All Commentaries in French and English**  
It is interesting to note that most presentations at Montreal must be presented with both French and English sound tracks for their commentaries. This is an imperative in bilingual Canada.

Five-minute 16 mm color loops and four-minute color loops will help explain "Resources of Man" as film producers Woods and Ramirez also employs 780 color slides to illustrate the theme story. In Area 1, rear 35mm color projection on an acrylic block wall promises to provide outstanding dimension to these images.

**Films Carry Theme for "Man in Control"**  
This film is also part of the theme "Man in Control" as producer James Beveridge uses black and white 16mm loops for three parallel screens plus a 35mm Eastman color loop.

(CONCLUDED ON THE FOLLOWING PAGE 65)

## Change films in 2 seconds flat!

Read how Fairchild's amazing new MoviePak cartridge multiplies the value of your entire sound film program

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play. In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training classes. In the boardroom. To switch instantly to another film, just snap out one cartridge, snap in another.

Every film you have can be easily converted to 8mm and threaded into the MoviePak cartridge. Duplicate prints are less expensive than 16mm, too. Now you can unleash the full power of your entire sound film program.

The Fairchild Mark IV projector is portable, weighs only 20 pounds and is always ready for action. No warm-up time required.

For display use, it will run without supervision, repeating automatically. It takes up to 22 minutes of film with a single MoviePak.

To see for yourself, just send in the coupon.

### INDUSTRIAL FILMS AT VENICE:

(CONTINUED FROM THE PRECEDING PAGE 14)

ment of drugs for modern medicine to hit the screen in years.

Who can forget the sheer poetry of those color dissolves which revealed the design artistry of Finland's *Textiles*, as created by Aimo Japerholm of that country's Sektor Filmi? Scenes of woodland and water, of nature's wondrous works merged into patterns of material that truly enhance Finland's world reputation for textiles. This winner of Category B first place honors will stand beside the finest of its kind for many a year!

#### Towns Spread Out "Like Rings on Water"

The Swedish first-place winner (in Category A) was one of the Festival's few black and white motion pictures. But *Like Rings on Water*, it spread its influence among members of an appreciative audience and won members of its jury. The film expresses the idea that the towns of tomorrow must be diffused into the countryside, to give their inhabitants the benefits of country living. *Elements Facing Elements* brought another small country high honors as this scientific-technical exposition by Ence-Cemij and Robur N.V. of Holland won the first prize in Category D at Venice.

The world's interest in a really striking film about audiovisuals was reflected in the top prize given *Visual Aids*, the British entry produced for that country's Ministry of Defense (Navy) by Stewart Films Ltd. We predict that U.S. schools and business groups will welcome prints of that provocative treatment of the right-and-wrong way to use audiovisuals. A final first-place prize of the Festival went to another British entry: *The Stable Door*, sponsored by the British Insurance Association and produced by Ronald H. Riley & Associates. These two category "firsts" clearly put Britain in the lead for the Grand Prix it received.

#### Awards Ceremony Lacking in Showmanship

That was the prize-giving at Venice. When that ceremony was held at the sugar-and-ice cake Excelsior Palace on the Lido on Sunday

"Two Cubic-Centimeters for Life" shows science at work in the production of medicinal drugs.

evening, otherwise flawless handling of Festival events were somewhat marred by a small room, announcements in pure Italian without translation and unseemly haste. Most of the awards themselves were of friv- Venetian glass and their recipients no doubt had a considerable problem in transport!

Prizes, though important to their winners are of lesser significance to the overall evaluation of Festival week. It was the privilege of discussing common interests with fellow jury members which transcended social amenities. Its dual role as journalist as well as jurymen exchanges with numerous representative topflight European dailies and magazines of inestimable value. And a highlight of the week came when the first visitor from one of Africa's developing nations attended the opening press conference and subsequent show. Francois Lutangu, representing the Films Press Department of the Congo, came to Venice seeking films to help teach his country better agricultural methods. His brief but inspired plea to a final parliamentary session the Festival made a deep impression.

#### Men of Six Countries Working Together

To members of our jury, which helped select the winners in Categories E and F, we express our heartfelt appreciation. Our chairman, O. A. Wiiio, performed his duties admirably! Other members of the jury: Herbert Podradsky (Austria); Kaj Sandell (Sweden); Dr. Guiseppe Tavazza (Italy); Dr. Thomas Ukert (Germany); and George Dauge (France) were in unanimous agreement when final selections in these categories were tallied.

Our fellow U.S. delegate, Carl Lenz, president of Modern Talking Picture Service, shared jury duties as our alternate at Venice. And he also shares our sentiments that the European events have no equal in the movie world. Let's summarize with a few of the reasons:

1. For the past seven years, in various European cities, these events have been organized under the auspices of the Council of European Industrial Federations (CEIF). They carry authority (as well as the respectful attention of leading industrialists throughout Europe).

2. Each year's Festival is held by a member of CEIF. At Venice, the host group General Confederation of Italian Industry Italy's Minister of Trade was present at prize-giving ceremony. Collaborating with the national industrial federation were the Association of Venetian Industries and Italy's National Cinematograph and Allied Industries (ANICA).

#### Festival Dominated by a 35mm Standard

3. The presentation of films is superbly handled in 35mm (and 70mm). Europe doesn't appreciate the significance of 16mm sound-on-film which dominates U.S. showings of these films to tens of thousands of audiences each month. It will be a long while before Europe recognizes the on-coming 8mm film medium. But this showcase at Venice is the site of frequent international film competitions: a beautiful setting for members of international business and the press who attended.

4. Press coverage of these annual Festivals is very, very extensive. Leading dailies fr-

and the Continent were well represented and a press room enabled them to file special reports, including television coverage, to their journals. European newspapers and business magazines give far more space to the industry than do similar journals in the United States. HANDELSBLATT of Germany, for example, printed an entire special supplement on the festival film.

**Top-Level Conference at the O.E.C.D.**  
 Our pilgrimage to Venice included visits to France, Germany and England on this year's trip. Considerable time was spent in the Technical Assistance Mission of the U.S. Agency for International Development and in top-level conferences on the grounds of the Organization for Economic Development (OECD). We merit personal kudos from Venice to Germany's Leonaris-Film and its head, Dr. Georg Bueck, for his company's splendid work on *Cubic Centimeters for Life*.

And last, but far from least, were those equal days in London where we renewed contacts with European Editor Peter Rigg and his lovely wife, Jane Senior. A memorable afternoon with J. Lillie-Costello of Shell-Mex BP Ltd. made possible a personal review of our U.S. distribution efforts on behalf of her company's 1965 award-winner: *The Forth Bridge*. Lillie-Costello told us of his company's sponsorship of *City in the Kingdom*, on the roof of Coventry Cathedral, and brought the leading feature which appears elsewhere in this issue.

**Shell's Fine New Film on Water Pollution**  
 And thus a pilgrim made some progress in building relationships with friends, new and old throughout Europe. And as a reward, we heard of common goals in the making of new motion pictures on the worldwide water pollution problem: *The River Must Live*. Space limits the opportunity of sharing more detailed observations but this must be said: we are inspired toward new goals of service toward achieving better exchange of both goods and ideas across the narrow Atlantic. The communication of such media draws us ever closer; the first flight of a super-sonic transport jet also breaks time barriers. •

## Audion Corporation Is Organized to Create, Market A-V Equipment

The organization of Audion Corporation, a new company for the development and marketing of continuous audio-visual equipment, has been announced by Paul G. Greene, board chairman of the new firm and president of Johnson-Greene Co. in Ann Arbor, Michigan. Audio has set up its headquarters at 201 East Liberty, Ann Arbor, Michigan 48108.

The company's president is Elliott M. Fox, former head of the optical development department of Conductron Corporation in that city. Conductron's former sales manager of electro-optical products, Stanley J. Hanson, is now vice-president of Audion. The company will have its own national sales organization but also sell through distributors and dealer-members of the National Audio-Visual Association.

Audion has taken over the organization, inventories and product designs of the former Audio-Sell, Inc. group. An extensive manufacturing facility in Charlotte, Michigan has also been acquired. The company now offers various basic message-repeater continuous tape cartridge units which are used separately or combined with 8mm continuous film loops, filmstrip and 35mm slide projectors.

One innovation developed is a self-recorded inaudible signal which provides for automatic single-frame projection while tape narration continues; it also has automatic restart of film.

## News Along the Film/Tape Production Line

### Walton Schroepfel Dies at 59

Services for W. Walton Schroepfel, 59, founder and chairman of the board of Allen, Gordon, Schroepfel and Redlich, Inc., Chicago producers, were held in early October at Wauconda, Ill. Mr. Schroepfel is survived by his widow, Elma; a daughter, Sussane; and a son, Steven.

\* \* \*

### Henk Newenhouse Establishes a Custom Sponsored Film Division

With the addition of two experienced film library men to its staff, a newly-established Sponsored Film Division of Henk Newenhouse, Inc. is operational at 1825 New Willow Road, North-

field, Illinois in suburban Chicago.

Heading the activity are Charles L. Lauritzen and Phil Tobin. Lauritzen was formerly with Ideal Pictures and Tobin was associated with Contemporary Films. Both men have considerable experience in film-handling and distribution.

\* \* \*

### Johnson Now District Manager in Technicolor's C&E Division

Harold A. Johnson is the new Great Lakes district manager for the Commercial and Educational Division of the Technicolor Corporation. He succeeds Kalman Spelletich, Jr., recently promoted to manager, audio-visual sales for the Division.

## H F E Salutes

### The County of Los Angeles

as a consistent and effective user of motion pictures which meet a variety of communication needs — and as a frequent winner of awards for excellence of production, including: a Columbus Film Festival Chris, an IFPA Cindy and Best Director Award, a New York International Film and TV Festival Silver Award, American Film Festival and 1966 EFPA honors for *Homeless Child*; a Chris Certificate for *Marina Del Rey*; and an IFPA Cindy Certificate for the public information film, *Angel By the Hand*.

Like many another award-winning film user and producer, the County of Los Angeles is a Hollywood Film Enterprises laboratory customer. The people who specify lab services like the end-results of HFE's three-point control-checks: chemical control, color control, processing control. They know this means quality: unvarying and exact duplication of corrected and approved originals in finished prints.

County of Los Angeles film personnel also appreciate the safety factor at HFE — the care with which each original is handled and each order processed.

All this adds up to what's best described as *complete, PERSONALIZED 16mm Laboratory Service.*

Try some, soon, won't you?

## Ampex Has Videotape Copying Facility at Elk Grove Village

A videotape duplicating facility which will provide tape services to users of Ampex closed circuit recorders has been set up at the Ampex Corporation in the Elk Grove Village, Illinois (Suburban Chicago) area.

The new facility at Elk Grove Village, Illinois (Suburban Chicago) will deliver single or multiple duplicate tapes made on Ampex VR-6000 or VR-7000 can scan recorder using one-inch wide tape or other Ampex models using two-inch tapes.

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

image bulls-eye is set in the center of a special "pebble" ground glass. When the scene is in focus only the circle and hairline TV guide are visible. When out-of-focus, the center line splits and the "pebble" texture appears.

Cost of the viewfinder is \$100, including camera installation and alignment. Write or phone Behrend's at 161 E. Grand Ave. in Chicago.

\* \* \*

**Zeiss Vario-Sonnar Zoom Lens Available for Arriflex Cameras**

☆ A new Zeiss Vario-Sonnar F2.0, 12.5-70mm zoom lens is now available from the Arriflex Corp. of America for all Arri 16S and Arri 16M cameras. The lens is a high-quality objective with a total of 15 lens elements in its 12 components. It is said to provide high resolving power, exceptionally good contrast and highly-uniform illumination over the entire field.

Zoom movement is exceptionally rugged and smooth. At the 12.5mm setting, the angle of view corre-

sponds to a wide angle with a 52-degree angle of view. When set for 75mm, the angle of view is 9.5 degrees. Because of its light weight and compact size, the Vario-Sonnar does not require a lens cradle. Available at \$896 user net, it is available in limited quantities from all franchised Arriflex dealers.

\* \* \*

**"Circle-S" Automatic Color Film Processor Available from Sickles**

☆ A fully-automatic color film processor which will handle roll film in lengths up to 100 ft. of 35, 46 or 70mm film, both color and black and white, has been announced by Sickles Sales and Service, Scottsdale, Arizona.

The system is controlled by an electronic programmer which provides consistent color quality

**Ampex Introduces New Low-Cost VR-6000 Series' Video Recorder**

☆ The Ampex VR-6000 Series of compact videotape recorders for closed-circuit use now complement the company's VR-7000 models with which this new, lower-cost machine is fully compatible. Prices of the 6000 Series start at \$1,095; the higher-performance, heavy-duty 7000 models are priced from \$3,150.

Features on the Model VR-6000 include both video and RF outputs; they can be connected directly to any t.v. monitor or re-

Ampex VR-6000 on the job . . .

ceiver and used with any vidicon television camera. VR-6000 recorders operate at a tape speed of 9.6 inches per second and 1,000 ips. writing speed, resulting in high-frequency response both quality black and white recording and playback.

Like the VR-7000 Series, the VR-6000 recorders are also compatible with color recorders and may be modified for color operation at a later date. Monochrome tapes made on either Series will be playable in black and white on future color machines. Ampex Corporation's Consumer & Educational Products Division, 2201 Hunt Avenue, Elk Grove Village, Ill., offers complete technical data or just ask our New Products Desk.

\* \* \*

**Need More Data on Products? Drop Line to our Reader Service**

A single airmail postcard or your company letterhead request to the New Products Desk, BUSINESS SCREENS, 7064 Sheridan Road, Chicago, Ill. 60626, will bring complete product literature on any items reviewed in these pages. We'll forward your individual requests to the respective manufacturers as part of our reader services at BUSINESS SCREENS.

ColorTran's "Multi-Beam" 30

**Two Portable, Battery-Operated Quartz-Iodine ColorTran Lights**

Two portable, battery-operated quartz-iodine ColorTran lights have been announced by the Motion Picture & Television Division, Berkey Technical Corp. Both models use a 30-volt ColorTran 250-watt quartz-iodine lamp operating at 3400-degrees Kelvin. Heat-protected handles contain the on-off switch and their base has a threaded bushing for camera or stand mounting.

The Multi-Beam "30" provides full focusing from spot to flood, has fingertip control and weighs only 2 lbs., 10 oz., including its 6 ft. cable. The companion model, Quartz-King "30" is designed as a medium flood with fixed focus and weighs only 1 lb., 12 oz. ColorTran's 30-volt nickel cadmium battery is supplied with a detachable recharger. Two outlets permit full 30-minute operation (from a fully-charged battery) of two 250-watt, 30-volt lights.

Ask our New Products Desk to refer literature requests or write MP&TV Division, Berkey Technical Corp., 1015 Chestnut, Burbank, Calif.

\* \* \*

**F&B Ceeco Branches Offer Sony Videocorder for Sale or Rentals**

The Sony Model 2000 Videotape Recorder is now being offered for sale or rentals by F&B Ceeco, Inc., professional motion picture equipment supplier.

The Sony Videocorder will record any program off the air and play it back immediately on its own eight-inch screen. The portable unit weighs 60 pounds and can be purchased complete for \$995.

Optional equipment is a vidicon camera, with mike, tripod, cables and case for \$350. This outfit, with the recorder, permits film producers to rehearse actors, test lighting and camera angles and verify monochrome reproduction actual filming of scenes.

Behrend's "Design Model K"

**Behrend's H Printer Speeds Output Super 8 Magnetic Sound Films**

The new high-efficiency printer allows economical production of Super 8 prints with magnetic sound was shown at the recent SMPTE Convention in Los Angeles by the Bell & Howell Company.

The "Design 6600 Model K" printer produces high-quality contact Super 8 prints with magnetic sound at the rate of 800 feet per minute. A live-minute, 30-foot sound film can be printed in seven or eight seconds. Lab time now required to turn out the same using traditional optical printing and post-stripping techniques can take from 10 to 22 minutes.

The breakthrough is made possible by printing four identical strips of pictures and the corresponding four magnetic sound records in one single pass of the film. Prints are contact-printed from a single 35mm/Super 8 internegative developed by Eastman Kodak. The sound is reduction-transferred from a 16mm magnetic master. Continuing monitoring of the four sound records assures consistent sound quality control, eliminates listening to all the prints.

The new panel printer was developed by B&H in cooperation with Eastman Kodak to "open the field of audiovisual communications—an area where both quality and low-cost are important considerations." Kodak has purchased the printer for use in an experimental demonstration printing laboratory scheduled to become operational early next year in Webster, N.Y.

\* \* \*

**Behrend's Split-Image Viewfinder Ends All Doubt About Focusing**

A split-image viewfinder which ends all doubt about focusing has been introduced by Behrend's Inc. of Chicago. A split-

**Fast B&W Model 300 Camera  
Pictures Events in Microseconds**

Three times faster than any other continuous writing camera, the new Beckman & Whitley Model 300 was designed to photograph unpredictable events that occur in microseconds. The "300" records a sequence of 48 pictures at rates up to 4,500,000 pictures per second. Once turned on, it stays continuously alert, ready and waiting to picture the events whenever they happen.

This unique continuous "writing" capability is required to properly record such unpredictable phenomena as hyper-velocity impacts, nuclear reactions, laser discharges, plasmas, and many types of shock and vibrations. The Model 300 is a rotating mirror camera available

Beckman & Whitley Model 300

with either pneumatic or electric drive. With pneumatic drive, the nine-sided mirror rotates at speeds from 800 to 10,400 rps obtaining framing rates from 346,000 to 4,500,000 pictures per second.

The camera records on either Polaroid or standard cut film. For further information and detailed technical data ask our New Products Desk or contact Photo-Optical Instruments, 441 Whisman Road, Mountain View, Calif.

Hard-working hub element is the heart of the new... flanges and split reels... produced to business film. The same precision features... all film sizes. Built into... hub are two ball-bearing locks, 4 keyways for long-wear and rounded leading edges for operation ease.

**AudioVisual Equipment TradeFair**

"Command Performer" Useful in Multi-Projector Programming

The "Command Performer," a solid-state programmer which con-

trols up to four projectors using slides, filmstrips or motion pictures in a pre-determined sequence has been introduced by the Arion

Products Division of Minnesota Audio-Visual Co. The system electronically puts a program on two channel tape.

It consists of a coder and decoder. The coder feeds electro-magnetic control signals for each projector into the Channel 2 input of a tape recorder. The coder has a small keyboard so the operator can give specific signals to start or stop, switch lamps on or off, move forward or reverse and change, skip or dissolve. The signals go to each projector independently and the system can control house lights and curtains.

The decoder automatically "reads" the tape, controlling projectors in response to various signals. With four projectors focused on the same screen, they fade in and out on cue. The cost in this system lists at \$1,000. Coders are priced at under \$50. Ask our New Products Desk to relay your inquiry for data.

**IN-WALL LENS SCREEN**

**22-Ounce TMC "Pocket Projector" Will Show Filmstrips or Slides**

Put it in your coat-pocket. This new miniature-size 35mm strip (or slide) projector will demonstrate a product, show charts or other visual material within seconds. The new TMC Pocket Projector uses a mounted filmstrip (eight frames or more) or a slide carrier for any 35mm slide. Of diecast aluminum construction the projector weighs only two ounces and measures only 1 1/2 inches x 2 3/4" x 3 3/4". Price \$29.95 list.

The educational and industrial division of The Taylor-Merrill Corp. has introduced the Pocket Projector. The 300-watt

TMC Pocket Projector: weighs only 22 ounces...

illumination equivalent is provided by using a standard 100-watt projector lamp and a power three-element lens. It operates on AC or DC or it can be used on a 12-volt car battery with modification. Drop a card to New Products Desk for more

## Audiovisuals for Business & Education

Smith, Kline & French Sponsors  
 Motion Picture as a Life Goal

A new motion picture designed  
 to alleviate the critical doctor  
 shortage has been produced by  
 Evin-DeFrenes Corporation,  
 Philadelphia, for the American  
 Academy of General Practice  
 (AAGP).

Titled *Someone You Can Trust,*  
*Someone You Can Be*, this 29-  
 minute, 16-mm sound color film  
 is sponsored by Smith, Kline and  
 French Laboratories, Philadelphia.

John P. Grenber (right) plays the role  
 of an intern in AAGP picture.

How was photographed in  
 an Ektachrome commercial on  
 an Evin-De Frenes sound stage  
 in a location in Abington  
 Memorial Hospital, Abington,  
 Pennsylvania. The story revolved  
 around a high school senior who  
 decided to seriously consider  
 medicine as a "family doctor".

The film was premiered at the  
 31st annual convention held  
 in Boston on October 8-9.  
 Screenings may be arranged  
 by writing to the American Acad-  
 emy of General Practice, Volker  
 Field at Brookside, Kansas  
 City, Missouri 64112.

\* \* \*

Story of R. S. Reynolds, Sr.  
 told in "To Reach the Dawn"  
 is the personal story of R.S.  
 Reynolds, Sr., founder of Reynolds  
 Metals Company, is told in  
 the film, *To Reach the Dawn*,  
 in national distribution  
 by Association Films, Inc.  
 The 15½-minute color film is  
 produced by Reynolds Metals  
 Company and was produced by  
 Reed Productions in asso-  
 ciation with Film Counselors.

Documenting Mr. Reynolds' life  
 from 1901, when he met his future  
 wife, to the end of World War  
 I when he was awarded the  
 Navy's Citation, the film re-  
 creates much of the drama,  
 triumph and excitement in the life  
 of a man who never ceased in

his personal quest "to reach the  
 dawn."

It also traces his various en-  
 deavors from the manufacture of  
 household cleansers to the produc-  
 tion of water-proof containers dur-  
 ing World War I, and subsequently  
 to the manufacture of tin and lead  
 foil. From this he converted to the  
 production of aluminum and  
 founded the Reynolds Metals Com-  
 pany as it is known today. The  
 use of actual newsreels from both  
 world wars helps to build histori-  
 cal interest in this tale. •

United Air Lines Has a New Ski  
 Picture—"Yoo Hoo! I'm a Bird"

☆ A companion film to United  
 Air Lines' popular *Ski Country*,  
*U.S.A.*, has been released for na-  
 tional distribution through 22 of-  
 fices of Modern Talking Picture  
 Service, Inc. Titled *Yoo Hoo! I'm*  
*a Bird*, this latest 28-minute color  
 picture was produced by Roger  
 Brown and Barry Corbet of Sum-  
 mit Films, Vail, Colorado.

"The objective of our newest  
 film is to show people having fun  
 on skis at a number of winter  
 sports areas," says John P. Gren-  
 ber, executive producer of the film  
 and United's staff manager for  
 special advertising projects.

Fred Iselin, director of the As-  
 pen Highlands Ski School, is fea-  
 tured in the new film as are se-  
 quences shot at six of the most  
 popular ski areas in the U.S. •

\* \* \*

"This Is Marina City" Details  
 Construction of Circular Towers

☆ The soaring twin towers of  
 Marina City along Chicago's river-  
 front have attracted world atten-  
 tion among architects, builders and  
 city planners. The circular build-  
 ings which contain apartments and  
 garages for their occupants are  
 flanked by office and theater  
 structures. At their base is a con-  
 venient marina for residents who  
 own pleasure craft and there are  
 also several restaurants.

This fascinating concrete con-  
 struction project is the theme of a  
 19½-minute color motion picture,  
*This Is Marina City*, now available  
 for public group viewing from the  
 library of its sponsor, the Port-  
 land Cement Association.

The film describes the planning  
 and construction of this unique  
 project and gives details on the  
 many new construction innova-  
 tions involved. For loan requests  
 write: Portland Cement Associa-  
 tion Film Bureau, 33 West Grand  
 Avenue, Chicago, Ill. 60610. •

Designed for its purpose: the new Russell Film Laboratory in Jacksonville, Florida.

### Russell Film Laboratories Has Modern Jacksonville, Florida Plant

1966 has been an auspicious year for Russell Film Laboratories, well-established service facility in the Southeast and, since March, the occupants of a modern building which was designed and constructed as a motion picture laboratory. Present services include color printing, b&w reversal and negative/positive processing and printing as well as Westrex optical sound recording in both 16mm and 35mm.

Russell's latest acquisition is a new Pako ECO-ME4 combination color processing machine. It will make possible faster service, color work prints on a daily basis. A color negative positive machine will be added later.

Within this fireproof, dust-free lab there is a private, fully-equipped editing room for producer clients; screening facilities to check dailies and answer prints.

All these facilities reflect the more than 30 years of film experience earned by the company's president, Gerden Russell. He summarizes his outlook in these words:

"Our building is new and the emphasis today is on color, but the things which helped build our business will always remain the same: courtesy, individual care, quality work, competitive prices, fast service and, above all, a real understanding of the producer's needs."

\* \* \*

### Communications Films Subsidiary of Design Firm, Enlarges Staff

A two-year old subsidiary of Walter Landor & Associates, Industrial Design firm in San Francisco, is growing fast. Five appointments to the creative staff of Communications Films, as the unit is called, were announced last month by executive director Charles Larrance.

The five new executives and

their staffs occupy studio/offices at the Visual Communications Center, located above former Southern Pacific ferry Klamath, on Pier 5 in San Francisco. Animation, still and picture production as well as sign and conference facilities also at the Pier 5 headquarters.

\* \* \*

### Frank Pfeiffer, Gerald Rogers Wilding, Inc. as TV Producer

Frank Pfeiffer and Gerald Rogers have joined the production staff of Wilding, commercial production director that company's Chicago area studio. Pfeiffer is a veteran in production and honored by awards from American Television Competition Festival, N.Y. International Festival and at Columbus.

Rogers began his career Industrial and Military Filmmaker at Wilding, later became a writer/producer director Helicopter.

\* \* \*

### Menell Group Set Up to Group Communications Firm

Menell Associates, Inc. has been formed in New York to provide solutions to problems created by increasingly sophisticated designs and construction needs for internal systems for communicating information.

Heading up the company is Jerome Menell, president and W. Weikert, vice-president. Menell continues as president of Jerome Menell Co., Inc., which sells, rents and services audio and video equipment.

Communications facilities A. T. & T. and Shell Oil Co. in New York, AMF World Group in Richmond, Va. U.S. Naval Supply System in Washington, are being designed by Menell Associates.

## EXPO '67: AUDIOVISUALS

(CONTINUED FROM THE PRECEDING PAGE 57)  
projected on a circular globe screen, positioned beneath the three b&w screens. Onyx Films, of Montreal, will help present the agricultural theme within the exhibit "Man the Provider" and they will use both sound recordings (bi-lingual) as well as eight motion pictures and numerous slides for the various sector areas: basic cycle, soil, plants, mechanization, poultry and animal breeding.

The theme area: "Man and Health" will have a film and stage show titled *Man and His Health*, produced by Robert Cordier. The film presentation will employ six to eight 16mm black and white film loops projected on three screens. For "Man in the Community" a film titled *Urbanissimo* is being produced by The Hubley Studios, using three separate 35mm images, combined in a single 35mm composite print. The sound film will be an animated subject depicting the processes and problems of city growth and development.

Exhibit Details Supplied by Roger Blais

We are indebted to Expo '67's audiovisual coordinator, Roger Blais, for many of the details provided in this pre-fair report. Obviously, all are subject to the myriad of changes which always take place within the months preceding opening day. In subsequent features we hope to bring our readers other details of new a-v innovations at this latest "world laboratory" of the audiovisual medium.

\* \* \*

## 60 MILLION SEE PARKE-DAVIS FILMS

(CONTINUED FROM THE PRECEDING PAGE 43)  
who are contributing so much in the fight to eliminate sickness and disease."

The bulk of the 60 million viewers have seen the firm's oldest film, *Going Our Way*, Johnson explained. Since being introduced in 1957, it has played before an estimated television audience of better than 33 million on nearly every TV station in this country. In addition, nearly three million others have seen the film within their community group audiences.

More than 14 million people have seen a 1965 Parke-Davis picture, *Counter-Attack!*, while another eight million have viewed *Front Line*. Another film from last year, *Story With No End*, has been seen by 120,000. *Time For Living*, just released, has already been seen by about 40,000 persons.

Prints are available without charge to groups through the firm's 19 branch offices in the U.S. or from any of the 31 offices of Modern Talking Pictures Service, Inc., the organization handling national distribution of the films. Requests pour into Parke-Davis daily, and a list of their points-of origin reads like a page from a road atlas.

Names like Hamtramck, Mich., Zephyrhills, Fla., and Pilot Mountain, N.C., are mixed in with larger cities such as Los Angeles, New York and Chicago. But the difference in size and geography mean little to Parke-Davis.

"We've found that people enjoy the films regardless of where they see them," said Johnson. "We're only happy we can bring them to so many."

*A Name  
with a Purpose*

★

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

## Men and Events Along Production Lines

### Capital Labs' Garland Misener Develops New Color Scene Tester

A new additive color scene tester, currently operational at Capital Film Laboratories' new Miami, Florida laboratory, has been designed by Garland Misener, the company's technical vice-president. He described the new printing unit at the recent 100th Technical Conference of the SMPTE at Los Angeles.

To obtain frame-to-frame color balance changes in the scene test prints at a rate of 10 frames per second, rotating aperture wheels are used to modulate the red, green and blue light beams in the dichroic mirror optical system of the printer. The printed result is a "color ring" of seven picture frames, each with a different color balance. The color ring is automatically repeated at five exposure levels, with intensity control by a fourth modular wheel.

#### Evaluates Densities of Negatives

With the color range printed at each exposure level, the timer can make accurate color balance evaluations for printing negatives of different densities. An extended color range mode is provided for testing editing negatives which may have a wide range of color balance. This mode of printing may be switched in or out as needed.

The scene-tester prints by optical projection and operates in normal room light. This facilitates safe handling of negatives and more efficient operation.

... agency consultant Penney

### Edmund Penney Joins Niles-Cini As the Agency's A-V Consultant

Writer-director-producer Edmund Penney has joined Niles-Cini Advertising, Los Angeles, as audio-visual consultant. He will continue to head his own film production company, Edmund Penney Productions, which will headquarter at the agency.

Ed Penney's recent credits include such documentaries as *Angel's Flight*, *Language of Drawing*, and *Song of America*. He recently completed *The Matzlers* for the Los Angeles County Museum of Art.

### Buscher Directs Ridgefield, N. J. Library of Association Films, Inc.

☆ Kenneth L. Buscher has been appointed Manager of the Association Films, Inc., Ridgefield, N.J. film library.

Mr. Buscher was U.S. Property and Fiscal Officer from 1951 to March of this year. A colonel in the Army, he was responsible for logistical and fiscal support to the Army and Air National Guard of New York. This involved the receipt, storage and issue of federal equipment valued at approximately \$200 million and yearly expenditures in excess of \$20 million.

\* \* \*

### Just Call 'em "The Film Group"

☆ There's a new company name for the Chicago studios of Hedman Gray & Shea, Inc. As Michael Gray, newly-elected president explains it, "we just got tired of spelling all those names and then describing what we do. Now it's all in the name: The Film Group, Inc. But they're still located at 430 West Grant Place on Chicago's near-north side.

\* \* \*

### News of Executive Appointments:

Maurice W. Stevens is now with The Film-Makers, Inc., serving as a producer-director in that company's Chicago-based studio.

☆ Ian Michael Summers has joined Applied Concepts, Inc., New York City, as director of client relations.

☆ Charles A. Perry, Jr. has been named field sales manager for x-ray and motion picture products in the Atlanta, Ga. district office of DuPont's Photo Products department.

\* \* \*

### Filmack Appoints Harlan Croy as Vice-President of Film Division

Harlan Croy has been named vice-president in charge of the Industrial and Business Film Division

of Filmack Studios, Chicago, according to president Mack, the veteran producer also direct a new department industry-oriented employing programs.

## REFERENCE SERVICES

### Fall Issue of "Free Film News" Offered by Sterling-Movies, Inc.

☆ Sterling Movies, Inc., sponsors of sponsored films, is offering copies of the new fall issue of *Free Film News*, a pictorial descriptive catalog of 16 films available to organized audiences.

Twenty-three categories are included in the new issue including art, fashion, industry, travel, and professional-topics. In addition to a large selection of individual films, Sterling offers general film forums, film series, a feature plan which provides on a regular weekly or monthly basis. Bookings are handled through an automated system and are available as far in advance as the guidelines.

Copies of the new *Free Film News* are available from Sterling Movies, Inc., 43 West 61st Street, New York 10023.

\* \* \*

### Ask for Your "ColorTran"

☆ Berkey Technical Corporation Picture & Television is distributing the first edition of a new publication called *Tran News*. Installations of *ColorTran* are shown and briefed, at a technical material on lighting and informative presentation of eight-page, two-color bulletins printed in 8 1/2 x 11" size, punched for 3-ring binder. Copies of this and succeeding issues of *Tran News*, 1015 Chestnut, Burbank, Calif. 91502.

\* \* \*

### Single-Reference Manual, Film List Offered by Bebell & Bebell

☆ Bebell & Bebell Color Services, Inc., has unified its motion picture photography laboratory service price list and reference manuals into one comprehensive manual.

Each section is indexed with tabs for quick reference to picture services, slides and strips, transparencies and prints, graphic arts and editing services.

Copies are available from Bebell & Bebell at 108 West 28th Street, New York, N.Y. 10011.

# Anyone can distribute sponsored films!

Sure, anyone can distribute sponsored films! All you need is a small office, some paper and basic supplies, the simplest kind of rewind and splicer (some programs have been known to operate without the last).

But suppose you want your distribution to be the best in every way—to match the quality of your products and the reputation of your company.

Suppose your distribution objectives included such important things as reaching only the audiences that benefit you most; keeping your prints always in tip-top condition; making the most of the available print supply; obtaining complete and accurate management reports; and, doing the most effective, most efficient job of sponsored film distribution that could be done.

In that case we think you would want your distribution to be the same as Modern distribution—and so you would need:

**Audience Knowledge** You would want to know where the thousands of audiences for 16mm films are located, who is in charge of film programming, what the interests of those audiences are. You would have to do constant research to locate the thousands of new audiences that are added each year.

**Addressing Facilities** Once collected, your audience knowledge would have to be recorded on your computer, addressograph or similar plates so that you would have the facility for using this information. And you would have to have the capacity to expand this file by 15 or 20 thousand audiences each year to keep up with the growing market for your films.

**Promotion Knowledge** You would have to know the best times of the year to promote the use of your films and how to design and write your promotion to appeal to the people you want to have see your film. If you were big enough (as Modern is) you could have a full-time staff working on advertising and promotion alone.

**Audience Confidence** This is a tougher thing—an intangible—that you have to build up through daily personal contact over many years. It results when your audiences have actually learned by experience that you are a reliable and convenient supplier of sponsored films.

**Film Libraries** For audience convenience and to make the most efficient use of your print inventory, you would need a decentralized network of film libraries. These libraries would have to be strategically located in major cities and should be placed at convenient addresses in those cities that are easily accessible.

*We have found that 31 such libraries provide effective national coverage.*

**Equipment** To operate efficiently you'd need the best of equipment. For example, your films, if they are to be kept in the best possible condition, demand professional film room equipment which, of course, would include electronic film inspection machines.

**Management Reports** If you want to keep management fully informed about the results of your distribution effort, you would want the facility that is only provided by electronic data processing. This would enable you to prepare regular reports of results by state, type of audience, marketing areas, and other vital information.

**Personnel and Administration** The heart of any film distribution program is, in the final analysis, SERVICE. And service means people. You would need capable people specially trained in the problems of film distribution to staff your 31 libraries. You would want to effectively supervise and manage all activities and plan for future growth and development. This would require capable administrators who have had many years of experience in sponsored film distribution who can devote every minute of their time to your objectives.

This isn't all but it will give you some idea of what is involved in this business of distribution of sponsored films IF you expect your distribution to be the best in every way. You can readily see that this is a full-time job for a lot of people.

The point is this... Modern has this know-how, these facilities, and capable personnel, NOW. And, Modern has the experience—30 years of it—devoted exclusively to the distribution objectives of over 700 major sponsors of business and public relations films.

Why be satisfied with less than the best, when the best costs no more... and often costs less! Phone or write any of the offices listed below. We have a wealth of experience and case histories that are yours for the asking.

you  
?

It's easy to tell. A salesman may have a good knowledge of your product or service but, for sales success, that's only *half* of what's needed. The *other* half, equally important, is "people" knowledge. When a salesman lacks this, he's just *half* as effective as he should be.

To be *wholly* effective, salesmen must possess "people" knowledge, understand the fundamentals of selling, and develop persuasive skills that motivate prospects to want to buy.

This new University of Marketing audio-visual sales course *offers this knowledge*. It makes it easy to train your men in the attitudes and techniques of today's top earners. It enthuases men to want to do a better job . . . shows them how to work "smarter", rather than harder.

The six two-hour sessions are so clearly programmed, it's remarkably easy to conduct the training meetings.

Mail the coupon for details on how you can *add another half* to each of your men . . . and *double* his sales effectiveness.

At Byron, we are proud of our Sound. Our Westrex 8-channel mixing console uses graphic equalizers to correct defects in the original sound recording track. New dynamic equalizers give a fuller music track under voice. An electronic echo chamber makes a "dead" narrator's voice come to life, a trio sound like a 10-piece orchestra. □ Byron offers every accessory known to the art of motion picture sound recording. All facilities for magnetic or optical recording and dubbing. Speedy transfer from any material to any material . . . 35 mm, 17½ mm, 16 mm, and ¼" tape or film (negative or direct positive). □ Byron's Sound Studio and the Byron Motion Picture Laboratory are closely coordinated for complete control . . . a big reason why film producers the world over get the best 16 mm and 35 mm sound recording and exclusive Color-Correct® prints from Byron.

# Niles and the Distinguished Award

October, 1966

▲  
**October 21, 1966**—Niles wins First Prize in Annual International Film Competition of Society for Advancement of Management. Winning entry: "Partners in Profit Profit for Partners," an unusual two-part film produced for The Kroger Company. Thirty minutes long, the film gives Kroger's 57,000 employees a deep look into the marketing philosophy and advances of their company. Then, it details how these advances make possible the firm's excellent profit-sharing and employee retirement income programs.

▼  
**October 23, 1966**—Niles wins Honorable Mention for film, "The Front Line," at San Francisco International Film Festival. Produced for Reader's Digest in cooperation with the Super Market Institute, this motion picture focuses on the traits of three women named "Checkers of the Year". It uses an unusual stop-caution-go background color theme to stress the importance of proper check-out procedures, to instruct new supermarket employees.

▲  
**October 14, 1966**—Niles wins Silver Medal at International Film and Television Festival of New York for its TV commercial, "Reactions"—produced for Sunbeam Corp. Here, an original score by Niles' Musical Director Sid Siegel complements scenes showing male reactions to women using Sunbeam's Ladies Electric Shaver.

▲  
**Three in one month** . . . out of more than 100 Distinguished Awards made to Niles in the past 10 years.

**W. S. Vaughn Heads Board; Dr. Louis Eilers President of Kodak**

☆ The newly-elected board chairman and chief executive officer of the Eastman Kodak Company is William S. Vaughn. He succeeds Dr. Albert K. Chapman, retiring January 1, after a distinguished career with that company which began in 1919.

Dr. Louis K. Eilers, formerly executive vice-president of Kodak, was elected president to succeed Vaughn. As the company's eighth president, Dr. Eilers now heads the firm he joined in 1934.

**Ford Previewing a New Science Picture "Man Is the Measure"**

☆ A preview showing on Monday, December 5 introduced a new science film, *Man is the Measure*, sponsored by the Ford Motor Company. The 25-minute color film illustrates the precise methods of measurement required in modern technology and shows how scientific progress depends on man's ability to develop even more precise techniques for measuring

distance, size and forces at the atomic and cosmic levels.

Narrated by Alexander Scourby and with an original music score, the new film will be available for free loan to groups and schools through the company's film libraries. It is noted as of special interest to high school and college mathematics and science classes and to all groups interested in scientific progress.

**Mendenhall Wins \$500 Award for Technical Developments' Data**

☆ John W. Mendenhall of Washington, D. C. has won the \$500 cash prize awarded by DeLuxe Laboratories in its Technical Developments Contest for the most complete list of "technical developments which have had the most significant effect or influence on the growth of the motion picture industry."

Second prize of \$300 was awarded to Miss Patricia Nelson, Los Angeles. The third prize of \$200 went to Gary R. Ullman of Ada, Minnesota.

Judges for the contest were Herbert Lightman, editor of *The American Cinematographer*; Kemp Niver, president of the *Renovare*

Company; and Oscar L. "Pat" Patterson, Management Consultant, Media, and a past president of both the Industry Film Producers Association and the University Film Producers Assn.

**American TV Commercials Entry Deadline Advanced to January 15**

☆ Sharply-increased entries expected from throughout the U.S. and abroad have moved up the deadline for the 1967 American Television Commercials Festival to January 15, according to Wallace A. Ross, director of the event.

Forms are in the mails to advertisers, agencies, producers and television stations in the U.S. while international entry forms have already been distributed.

Judging of TV Commercials' entries for this eighth annual event will again follow accepted product categories and craftsmanship areas. One major change in the entry formula is that production companies may enter directly the craftsmanship competition while advertisers and agencies may enter the individual product categories with neither competition necessarily relating to the other.

According to Ross, "this will insure that outstanding examples of

George H. Gribbin, 1967 chairman of American TV Commercials event is Creative and International Advisor to Young & Rubicam Agency

cinematography, direction, design, etc. will not be overlooked by the advertising-oriented executives who do the product category judging.

The standing group of advertising judges on ten regional panels will be augmented by a picked group of production experts for the craftsmanship competition.

George Gribbin, former chairman of Young & Rubicam advertising agency, is chairman of the board of advertising executives who plan and judge the commercials' competition in 1967.

Sponsored Films Win Honors at the San Francisco Film Festival: Business-sponsored and other notable factual films were among the award-winners at the recent San Francisco International Film Festival. Honored in the Festival's "Film as Communication" competition division were such pictures as *Physics and Chemistry of Water*, produced by Film Associates of California for Lever Brothers (category 1, classroom films); *The Front Line*, produced by Fred A. Niles Communications Centers, Inc. (category 2, training films) and *Language of the Bee*, winner of a silver award given the Moody Institute of Science (category 3, informational films).

Two National Film Board of Canada films, *Memorandum* and *Buster Keaton Rides Again*, won high honors. The former received the Golden Gate Award in category 5, essay films and *Buster Keaton* won the NFB a silver trophy (category 6, factual films).

Dynamic Films, Inc. received a silver award for *The Collection* in

category 7, promotional films. Honorable mentions in this group went to *The Making of Life*, sponsored by Time, Inc.; and *Life in the Balance*, sponsored by the Standard Oil Company of N.J. In category 8 (influence films), the silver award was presented to the County of Los Angeles for *Homeless Child*, produced by Don Hoster; honorable mention in this group was given *Glen Canyon*, produced by Larry Dawson Productions.

A sponsored motion picture, *The Master Singers*, entered by the National Coal Board of London, England, won the top silver award in the Festival's "Film as Art" competition. The Wilbur Streech film, *Moving Visuals*, was given the Festival's award for best use of animation in the "Film as Art" competition.

Jewish Audio-Visual Council to Review Film, Filmstrip Entries

☆ The outstanding film and/or filmstrip dealing with Jewish subject matter and released during 1966 will be given a special award to be presented by the National Council of Jewish Audio-Visual Materials. The award will be made at the 17th annual meeting and workshop of the Council in May 1967.

In announcing the award, Dr. Chaim I. Etrog, chairman of the Council's National Board of Review, suggested that producers submit information about such films and filmstrips of Jewish interest released in 1966 to Dr. Zalmen Slesinger, executive secretary National Council on Jewish Audio-Visual Materials, 101 Fifth Avenue, New York, N.Y. 10003. All entries must be in the offices of the Council not later than January 9, 1967.

\* \* \*

Next Month: these pages will feature "Pictures of the Year" in a broad review of 1966 film awards and other events.

## A great fraternal order tells its story through film, Knights of Columbus' "The Papal Challenge"

"Yes, man's works are good. For from his vineyards come music and gaiety and riches. His material blessings are many. But some are left behind. The material blessings are not universal. There are byproducts of poverty and injustice. There are social problems which cry out for answers."

**Spoken in "The Papal Challenge," a film produced for the Knights of Columbus by Audio Productions, Inc.**—which closes with a personal appeal to the Knights from His Holiness Pope Paul VI—these words come as no surprise when one considers the source. For the Knights of Columbus is a fraternal organization for whom ethical and social concerns have always been paramount. Indeed, "The Papal Challenge" is but the latest manifestation of this traditional concern of the Knights for meeting the challenge of great social problems.

**What might have come as a surprise,** however, was to see similar sentiments expressed by some of the leading representatives of the hard-headed business community in a recent New York Times survey on the social responsibilities of business, in which 37 top executives of the country's leading companies participated.

*His Holiness, Pope Paul VI in a scene from "The Papal Challenge"*

### N. Y. Times Survey suggests strong U. S. Business trend to Public Affairs Involvement

Among the revelations of the survey, it turns out that business men in general seek to cooperate with the government; feel that business has a role in supporting equal opportunity for all citizens; believe in fitting their business needs into the needs of society.

#### Some of the ideas advanced and the distinguished men who advanced them:

**Lamot du Pont Copeland, president of E. I. du Pont de Nemours & Co., Inc.:** "Management, it seems to me, must reach for a balanced solution within the framework of one unassailable precept: business is a means to an end for society and not an end in itself."

**David Rockefeller, president of the Chase Manhattan Bank:** "Increasing social awareness makes it essential that business take greater strides to demonstrate its responsible and progressive involvement in the life of the nation and the world."

**J. Howard Ramin, Jr., chairman of Texaco, Inc.:** "We have entered a new era in which the need for cooperation is clearly recognized by businessmen and Government leaders. The antipathy of earlier decades is beginning to disappear."

**R. G. Follis, chairman of the Standard Oil Company of California:** "Business has the obligation to utilize moral influence and persuasion on behalf of civil rights goals whenever it can do so effectively, without contributing to social unrest."

It is not surprising to note, in another New York Times story, that "Public Affairs activity suddenly has become one of the fastest growing segments of American Business. While ten years ago only a handful of companies had anything resembling a complete public affairs program, today at the very minimum, 500 corporations have such programs."

*Behind the camera for "Human Reproduction"*

### "Human Reproduction"—remake of a classic

Public Affairs is one of many areas in which Audio Productions, Inc., has been a leader. Education is another. In 1948, Audio Productions produced for McGraw-Hill Text-Films a film, "Human Reproduction," designed to fill the vacuum then existing in the field of sex-education. "Human Reproduction" has since been viewed by many millions of children and adults, in classrooms from junior high school through college level, by P. T. A. groups, religious groups, medical and mental health groups, police and social workers. It is used officially in Spain, France, Japan and India translated into those languages. In 1965, Audio Productions produced a new version in color and black and white which won the Blue Ribbon Award at the 1966 American Film Festival sponsored by the Educational Film Library Association, Inc.

### Audio Explains U. S. Jury System to Public

Recently Audio was chosen by the New York State Departmental Committee for Court Administration, to produce, under a

*E. G. Marshall*

Ford Grant, "The True and the Just," starring the distinguished actor E. G. Marshall. The purpose of the film is "to remind Americans of the dynamic role played by the juror, and the importance to justice of the jury system." We are pleased to report that "The True and the Just" is now being screened for all prospective jurors in the New York Courts, and will be distributed in law schools, colleges, high schools, and service clubs throughout the United States, as a public service.

Entry Deadline is January 27th  
for 1967 American Film Festival

The 1967 American Film Festival of the Educational Film Library Association has been scheduled for May 10-13 at the Biltmore Hotel in New York. Open to the general public as well as to the audio-visual specialists who serve on its juries, the Festival has been sponsored annually by EFLA since 1959, with Blue Ribbon Awards voted to top-rated 16mm films and 35mm filmstrips in 34 subject-area competition categories.

From the 830 entries submitted last year, EFLA Pre-Screening Committees nominated approximately 300 films and 70 filmstrips which were shown at the Festival.

All 16mm films and 35mm filmstrips released for general distribution in the U.S. during the calendar year 1966 are eligible for the 1967 Festival; and EFLA Administrative Director Emily S. Jones reports that detailed information about the Festival will shortly be mailed to 3,000 film producers, sponsors, and distributors. The deadline for submitting entries is

January 27. Entry forms are now available from EFLA, 250 West 57th St., New York 10019.

\* \* \*

Eastern Effects, L & L Animation Acquired by Berkey and Merged  
Berkey Photo, Inc., has acquired L&L Animation, Inc., of New York, which is now merged with Eastern Effects, Inc., also a Berkey-owned company. The combined organization is known as L&L Eastern Effects, Inc., and represents one of the largest optical effects laboratories in the country. L&L facilities and personnel have moved to expanded facilities at 219 East 44th Street, New York.

L&L Eastern Effects is headed by Sam Lang, president, and Len Zoref, vice-president, formerly of K&L Color Services, Inc. Other key responsibilities at L&L Eastern are shared by Chris Grodewald, in charge of the optical bench department; Larry Lippman in charge of art and animation camera; and Rod Friedson in charge of layout. Edgar Berger is in charge of quality control on color timing and Les Price heads up production control.

Increased facilities at L&L Eastern now include seven optical

benches, four animation stands, complete art staff, and b/w film processing on premises.

\* \* \*

NEA's Audiovisual Division is Surveying School CCTV Facilities  
A nationwide survey of closed-circuit and "2500 megacycle" television facilities in American schools and colleges is being undertaken by the Audiovisual Instructional Service Division of the National Education Association in cooperation with the U. S. Office of Education.

A two-phase project, charted for completion in March, 1967, the study will first cover the "software" aspects of these growing instructional television services. Dr. Anna L. Hyer, director of the NEA's Audiovisual Division, notes that questionnaires going to some 16,000 public and private schools, junior colleges, colleges and universities (representing about 90% of all educational institutions in the U. S.) will cover such topics as: numbers of students and instructors using closed-circuit TV programs, types of television facilities, subjects being programmed and sources of programs as well as unique innovations.

**Motion Picture Engineers  
Name Officers, Governors**

**N**ATIONAL OFFICERS and Governors of the Society of Motion Picture and Television Engineers who will head that organization for two-year terms, 1967 and 1968, have been announced by outgoing president Ethan M. Stiffle, Eastman Kodak Co.

The newly-elected slate is headed by president-elect G. Carleton Hunt, president of DeLuxe Laboratories, Inc. Deane R. White, E. I. du Pont de Nemours, Inc. will serve as executive vice-president and Rodger J. Ross, Canadian Broadcasting Corp., is the new editorial vice-president. E. B. McGreal, Producers Service Co., is the incoming conference vice-president and another du Pont executive, H. Theodore Harding, is secretary-elect of the SMPTE.

**Governors-Elect for 1967-68**

New governors of the Society for 1967-68 are Kenneth W. Mason, Eastman Kodak Co. and Arthur J. Miller, Du Art Film Laboratories, Inc., for the eastern region; William D. Hedden (re-elected), Calvin Productions, Inc. and Hans C. Wohlrab, Bell & Howell, central region; Robert C. Hufford, Eastman Kodak and Herbert E. Farmer, University of Southern California, western region. Gerald G. Graham, National Film Board, is the new Canadian region governor-elect.

Continuing in office through 1967 are financial vice-president Joseph T. Dougherty, du Pont Company; sections' vice-president Wilton R. Holm, du Pont Company; vice-president for education affairs D. Max Beard, U. S. Naval Ordnance Lab; vice-president for instrumentation & high-speed affairs William G. Hyzer, consulting engineer; vice-president for motion picture affairs Richard J. Goldberg, Houston Fearless Corp.; vice-president for photo-science affairs J. S. Courtney-Pratt, Bell Telephone Labs; and treasurer Saul Jeffee, president of Movielab, Inc.

**New Engineering Vice-President**

Executive vice-president-elect Dr. White's unexpired term as engineering vice-president will be filled by William T. Wintringham, appointed to that post by the Society's board at its October 2 meeting.

\* \* \*

☆ The year's great pictures will be reviewed in "Pictures of the Year" featured in the Number Eight issue, publishing early next month. •

# The money camera takes its movies seriously.

## Don't you?

you've stopped shooting films of your kids. When you realize what you take is serious business. Take the camera that takes its movies seriously Bolex 16: "the money camera."

When you see, "the money camera" is just that. The camera that you can count on. When there's something at stake. When your shots are not just fun, but money.

To give you an idea of what we mean, take the Bolex 16 Rex with 3 Switar lenses (shown at top). It's perfect for sales promotion, public relations, documentary and research filming.

Starts with reflex viewing. The kind that never lets you lose sight of your subject. Gives you automatic loading and spool ejection to speed loading. And gives you 3 of the world's great lenses, the Switar 25mm f/1.4, Switar 10mm f/1.6 and Switar 50mm f/1.9. And then gives you over 100 other combinations of lenses and accessories.

For example, want to split frame (above) or film

charts, shoot opticals? You can add the Bolex malte box (shown right). Or our special lens support. Want to shoot time-lapse for extended periods (shown left)? Add the Bolex Vario-Switar 86EE electric eye zoom lens (shown below) that adjusts automatically to varying light conditions.

Want to go underwater? Or into the Arctic? Anywhere. Anything. The Bolex 16 can take it. And deliver.

That's why we call it "the money camera." Because it's versatile, rugged, dependable. Because when the professionals have something on the line, they put their stock in it. See the Bolex 16 For public relations, sales promotions, research and study, it's the camera to put your money on. Bolex: "the money camera."

You can depend on it.

For free Bolex 16 catalog, write: Paillard Incorporated, 1900 Lower Road, Linden, N.J. 07036.

## Management Society Honors Three Pictures

Merrill Lynch, Kroger Company and Ontario Safety Assn. Are Winners of Third Intl. Management Film Competition

FOR SEVERAL YEARS, members of the Society for the Advancement of Management have acknowledged the growing importance of the motion picture medium in corporate and company management programs by devoting time and attention to an annual review of some outstanding films deemed most relevant to the interests of that group.

On October 21, the Third International Management Film Competition sponsored by SAM was concluded by an Awards Dinner in the Ambassador Hotel in Los Angeles. Three motion pictures were honored by Alf E. Werolin, executive vice-president of the Society and a Partner of Case & Company, management consultants in San Francisco.

### Grand Award to "Good Old Sam"

The Grand Prize award-winner was *Good Old Sam*, sponsored by the brokerage firm of Merrill, Lynch, Pierce, Fenner & Smith and produced by Parthenon Pictures, Hollywood. This 29-minute film depicts ways in which brokerage office executives can be awakened to the significance of their services. It was featured in an earlier issue of BUSINESS SCREEN.

Two first prize awards were also made at the dinner. The winner of top honors in Category A was a Kroger Company motion picture, *Partners in Profit Profit for Partners*, produced by the Fred A. Niles Communications Centers, Inc. This 38-minute film was produced for nationwide showings to Kroger employees. It provides them with an overall view of the company's marketing and merchandising programs and explains the firm's profit-sharing and retirement plans.

### Safety Film Wins First Prize

Another first prize award, in Category B of the competition, went to the Construction Safety Association of Ontario, Canada for its 17½-minute color film, *The Return of Milton Whitty*. Produced by Westminster Films Limited, of Toronto, the film shows construction industry groups the need for safety programs and how to initiate them.

David W. Guthrie, president of Modern Communications Co., Arcadia, California, was a principal speaker at the awards gathering. His theme: "Communications —

Producer "Cap" Palmer (right) receives Grand Award for "Good Old Sam" from Alf Werolin. In center: Samuel Grodin, exec. v.p. of Merrill Lynch, Pierce, Fenner & Smith.

the Key to Management Success" included a review of the "golden rules of communication" in areas of management education, motivation and the informing of employees and the public.

The Society sponsoring this annual awards competition in its specialized field of concern is the oldest scientific management group in existence with more than 300 chapters located throughout the U. S. and abroad. It recently observed its 50th anniversary year.

\* \* \*

### "Instant Movies" With Videotape Introduced at PRSA Conference

☆ "Instant Movies," an idea developed by Marathon International Productions, Inc., to provide better corporate communications, was introduced at the 1966 Public Relations Society of America Conference held at the Hilton Hotel in New York from November 9th to 11th.

Marathon's exhibit at the PRSA Conference demonstrated, with the use of the latest Sony videotape equipment, how portions of existing films could be selected, combined, reproduced, and even updated — in a matter of hours — resulting in a specially-designed "new movie" which could fulfill a client's specific interest and needs. Thus, suitably-equipped branch offices could be in constant visual touch with the home office with as little effort as the push of a button, and as little time-lapse as one mail delivery away.

Joseph Clair, formerly with NBC, has been appointed by Konstantin Kalser, Marathon International's president, to head the company's Videotape Division. •

**AND WE'RE NOT TRYING TO BATTER YOU UP.** *Why are you big at CFI?* Because all our customers are big fish to us. No job is too small to warrant our earnest attention. Whether you're a budding producer or an epic film maker -- from a spot commercial to a major motion production we give your job individual attention through every stage of its development. *Complete job?* At CFI we provide every service for you right in our own lab. *16mm or 35mm?* We process both in black and white or Eastmancolor. *Special effects? Opticals, titles, inserts, animation photography?* You name it, we do it. *Speedy service? Need dailies in the morning?* Our lab runs 'round the clock. *Quality?* At CFI, we have among the best facilities in the Business. Sensitometry equipment insures your film proper color correction and exposure balance; exacting chemical control gives you consistent color balance and density. And because we do the entire job at CFI, our team of experts is supervising your job every step of the way. *Thinking of a filmstrip?* We furnish artwork, shoot 3 dimensional products, superimpose type or shoot your slides from 35mm through 8 x 10 direct into your filmstrip. Special lighting assures minimum contrast gain and our unique continuous-loop printing equipment delivers uniform filmstrip prints from scratch-free negatives. *How long for a top-flight filmstrip?* Well, one week is normal delivery with us. But we'll work with you to meet even tighter deadlines. All these CFI services are as near as your phone. Pick it up and tell us what you need. We'll try to give you those big fish answers.

THE EDITORIAL VIEWPOINT

## GUIDELINES FOR FACTUAL FILMS

**E**VENTS OF THE YEAR have provided some very significant guidelines to the future outlook for factual film media which should be noted by both sponsors and producers. Here are some tangible clues from the news and from our widely-ranging contacts on the political and economic fronts in the U. S. and abroad:

1. The signing of the Beirut Agreement, opening up new possibilities for dissemination of internationally-useful films throughout the world, was disclosed in this column last month (see No. 6 issue) and is further detailed on page 44 of this edition). Certification of such films has been in effect for a long while, but new paths have been cleared for a much greater exchange.

2. Sales of 16mm sound motion picture projectors in 1965, that last accountable year to date, were the highest in 17 years\* and totaled 44,600 machines. There's a paradox here because sales of both 8mm silent and sound projectors have also shown a steady increase. But these 8mm machines are serving separate and other useful purposes.

3. A survey by the Association of Cinema Laboratories last year noted that 47 labs showed an increase in total footage printed of 32%. The number of color release prints is directly related to increasing demand for popular films among owners of projectors.

4. While avenues of film distribution remain strong in traditional directions — i.e. to self-equipped audiences in community groups, schools, churches, clubs, etc.; to television stations; theaters using an increasing number of sponsored short subjects, etc. — the development of specialized outlets such as airport theaters, 8mm rear-projection sound machines and resort groups, has widened the number of influential audience channels now available to film sponsors.

5. Many countries throughout the world are now also accessible for sponsored film distribution through the international network known as Inforfilm (see page 34). Increasing sales of products can be stimulated through overseas showings arranged in lands served by this organization.

6. The real keys to the future of factual films, however, lie in the hands of those who take careful note of the *new problems* facing business, education and government. Because film has the inherent power to bring *more complete understanding* of new technologies, social and human relations problems, interpretation of economic situations and of complex

(CONTINUED ON THE FOLLOWING PAGE 18)

\* as quoted in "Market Review, Nontheatrical Film and Audiovisual-1965" by Thomas W. Hope, for the Journal of the Society of Motion Picture & Television Engineers.

*at last*

there are flanges and split reels which

## THE EDITORIAL VIEWPOINT:

(CONTINUED FROM THE PRECEDING PAGE 16)

international relationships, it should be used with greater effectiveness in the years ahead.

Some of these problems are common to the U. S. and to the world at large: air and water pollution; better methods of food production to feed exploding populations; awareness of safe car operation to lower the traffic accident toll; health and medical education, both on a lay and professional level; re-training in new job skills dictated by changing technologies; and improved understanding between peoples under competing but often compatible political systems.

There are obvious problems to be met and conquered. The highly-creative skills which are so vital to successful film production must be given the assignments and budgets to get such films moving into action. Top management in the U. S. and abroad must be made conscious of the value of this medium.

Wasteful practices, such as the self-adulation witnessed in the over-abundant film awards programs which cost time and money, must be scrutinized. The one film "awards" program most necessary to hold the interest and gain the attendance of top management executives in the U. S. is long overdue. Factual film understanding and support is not served when business and industrial interests are subordinated at events which feature the entertainment motion picture.

The solid economic core of specializing

film production in the U. S., for example, still lacks a *single nationwide producer organization*. Producer organization remains *regional*, splintered by labor considerations and subject to the time and expense of coping with contracts.

And who really knows how many and what kinds of pictures have been created to date? The lack of a quickly-accessible national inventory of both business and educational films results in duplication, in a lack of guideposts to future possibilities. Title searches are endless and often fruitless. The use of automated electronic methods for cataloging of our film resources is overdue; the publication of horizontal catalogs of special interest films (as in the National Directory of Safety Films, the American Medical Association Film Catalog, and our own Sales Training and Management Film Guides) is a further key to stimulating wider use of existing product.

There is, indeed, much to challenge those who have the dedication and *faith* in the future of factual films. The world grows smaller and boundaries have been diminished by international agreement, by jet-speed flight of universally-understood films between nations and states, and by the splendid work of film makers capable of putting important ideas on the screen to an ever-increasing audience.

The horizons draw closer as millions witness such films as *To Be Alive!*, *The River Must Live* (see page 66), *Steel and America* and a myriad of other recent pictures now being widely-distributed. The dimensions of screen sizes, ranging from widescreen 70mm

for theatrical and special audience use to 8 in Super-8 for individual viewing (and freely-expressed as the inspiration of the front cover this month) are no problem whatsoever. Each may be used as the subject matter and the audience situation dictates.

It can be noted, however, that we vitally depend on the soundness of our ideas, on our willingness to look to the problems which surround us and to our creative talents for their complete interpretation of such subjects on the lighted screens that await our films. Above all, the *ideas* of men who guide the future of factual film media must be fortified by faith, armed by the experience that the cheap, the shoddy and unimaginative picture cannot win the hearts and minds of those whom it must reach. Our thinking must be toughened by resolve that better organization of resource can help speed the day when potential sponsors budget tomorrow's better films.

*Together, we say, the future is in our hands*

## New Pictures of the Month

### "The Lion Roar" Entertains Theater Owners While Selling MGM Pictures

CAN A BUSINESS FILM be "pure entertainment?" Can an entertainment film be "purely business?" In its recent 70mm, 30-minute promotional motion picture titled *The Lion Power—The Roar Heard Around the World*, Metro-Goldwyn-Mayer has answered "yes" to both questions.

Scenes from four dozen completed and "in-work" productions due for release in the coming season were presented in the picture at a premiere showing in Loew's Capitol Theater, New York City, to delegates attending the fall convention of the National Association of Theater Owners. The film drew unanimous acclaim from this highly-critical gathering of showmen.

Prints of *The Lion Power* are also being made in 35mm and 16mm for showing by MGM officials at all major motion picture industry conventions throughout the world. The film is also expected to have theatrical exhibition in the U. S. and abroad. In the process there will be at least a touch of "corporate image" content, since filming activities in far-flung parts of the globe are included as well as production activities at the MGM Studios in Culver City, California.

Beyond its primary "sell-the-exhibitor" objective and public relations value, the film also demonstrates the capability of Animation, Title, Optical and Laboratory activities of MGM, available to business film users and other producers.

*The Lion Power* was conceived and supervised by Andy Kuehn, of MGM's New York

office and Merle Chamberlin, the studio's post-production administrator in Culver City. The picture makes striking use of "trypich" division of the screen into two and three-segment sequences containing parallel or related action. The technique might be termed "simultaneous montage" as compared with conventional sequential montage effects. A sudden "splitting" of the wide image into three parts to show three different viewpoints or a dramatic widening of a scene in conventional size to double width, while a third screen-segment carries different action, has more than novelty value, however. The startling effect of these sequences is quickly absorbed by their sense of added dimension and heightened interest.

### State of Kentucky Makes Good Use of Films to Inform Its Citizens

Citizens of Kentucky, considering a revised constitution which updates that state's laws to modern times, are being helped by a 29-minute film, *To Be Informed: Constitution '66*, which Attorney General Robert Matthews calls "a great aid to the people of this state and one which will be utilized for educational purposes long after election day."

Produced by Jack Lieb Productions, this picture continues that state's active use of the film medium to promote travel, increase industry's interest in bringing new plants to Kentucky, and for an extensive citizen-information program through community showings.

The latest color film was widely shown on television and to adult audiences. Completely factual, it presented a careful balance of "pro" and "con" on the constitutional issues.

Just to Try Our New **AUTOMATIC**

# GUILLOTINE PERFORATING TAPE SPLICER

**Q. How economical is the GUILLOTINE SPLICER?**

**A. GUILLOTINE SPLICERS** use non-perforated tape which costs only \$2.15 a roll, as compared to \$11.00 a roll for perforated tape. Save up to a nickel per splice.

**Q. How fast does GUILLOTINE splice?**

**A. GUILLOTINE** makes splices 35% faster than conventional pre-perforated tape splicers, because you don't have to fumble with sticky tape, placing it over the sprocket teeth.

**Q. How strong is a GUILLOTINE splice?**

**A. GUILLOTINE SPLICER** splices are far stronger because the act of perforating the tape bonds the Mylar to the film.

These are facts which you can easily prove by using the **GUILLOTINE SPLICER**. Other facts which you should know are that you can make butt, overlap, or diagonal splices on film or sound recording tape. You can rebuild torn sprocket holes and you can repair damaged film without losing frames.

That's why **GUILLOTINE** is easier, faster, more reliable, and the most economical film splicer on the market today.

## SCREEN EXECUTIVE

C. J. Cerny Now Executive V.P.  
of the Da-Lite Screen Company

The election of C. J. Cerny, former vice-president, sales, to the post of executive vice-president of the Da-Lite Screen Company, Inc., Warsaw, Indiana, has been

Da-Lite executive C. J. Cerny

announced by president George H. Lenke, Jr.

Cerny, a native of Chicago, and a former executive of Montgomery Ward & Co., where he served from 1932 to 1953 in sales, personnel and operations, has been directly associated with many of Da-Lite's new developments in projection screens.

**Milton Gould is General Manager of Cinema Beaulieu, Los Angeles**

The appointment of Milton Gould as general manager of Cinema Beaulieu has been announced by that company's president, William Herskovic. Gould joined the motion picture camera firm in 1964 as its sales manager.

Prior to joining Cinema Beaulieu he was branch manager of one of the leading west coast wholesale photographic distribution companies. Currently he will head coast-to-coast operations from headquarters at 921 Westwood Boulevard, Los Angeles.

Berkey v.p. H. A. Hollander

**H. A. Hollander V.P. for Sales at Berkey Technical Corporation**

Herbert A. Hollander is now vice-president for sales of the Berkey Technical Corp., Woodside (NYC), New York. Hollander's appointment, confirmed by executive vice-president Harry L. Parker, follows his six-years of service as director of sales for ColorTran Industries, prior to that company's acquisition by Berkey Technical Corp. in January.

The company is the manufacturing and technical sales division of Berkey Photo, Inc. Products include such well-known trade names as ASCOR, ColorTran, Caesar-Saltzman, Berkey Direct Screen, Berkey Alldis Work Flow Systems, Oxberry and Simmon-Omega.

**Peter Krause Named General Mgr. of European Operations for GAF**

Peter Krause is filling the newly-created post of general manager for General Aniline & Film Corporation's European operations. The former director of manufacturing for GAF's Photo & Repro Division will direct and coordinate operations of the firm's European subsidiary companies. He will be based at the company's corporate headquarters in New York City.

## Trends in the BUSINESS of Audiovisuals

### Technicolor Projector Plant Is Dedicated at Costa Mesa, Calif.

☆ Dedication ceremonies for new offices and manufacturing facilities of the Technicolor Corporation's Commercial and Educational Division, located at 1300 Frawley Drive, Costa Mesa, California, were held at four p.m. on Tuesday, November 29. The extensive new facilities house the expanded manufacturing activities for that company's "Instant" motion picture projection equipment and other products.

### Capital Film Labs Report Gain in Sales, Profits to September 30th

☆ Increases in both sales and net operating profits for the six-month period ending September 30, 1966, have been reported to shareholders of Capital Film Laboratories, Inc., by that Washington, D. C.-Miami, Fla., based company.

In his report, president Alfred E. Bruch noted that sales had increased 34 per cent over the same period last year and that net income almost doubled. He also said: "our Miami, Florida laboratory operation is very encouraging. It has been in operation for the last three and a half months of this report period. They have completed 26 new *Flipper* shows, presently on the air, and one complete feature picture produced by Ivan Tors, titled *Gentle Ben*. Two other features were handled, as yet untitled, along with television spots and industrial pictures."

Sales for the six-month period were \$1,674,531 as compared to \$1,241,636 for the same 1965 period; net operating profit was \$135,366 as compared to \$57,444 in 1965.

### Electro-Netie Leases New Plant to Increase Radiant A-V Production

☆ Electro-Netie Steel, Inc., has leased a new 91,000 square-foot plant in Desplaines, Illinois. The million-dollar building will be used to increase the productive capacity of the company and part of the facility will be used in the manufacture of audio-visual products for Electro-Netie's subsidiary, Radiant Manufacturing Corp., of Morton Grove, Ill. The building is expected to be completed for occupancy about January 1, 1967.

The parent company in July, 1966, purchased a firm (now named Radiant-Pathe, Inc.) with distribution rights in the Western

Hemisphere for all motion picture cameras, projectors and slide projectors manufactured by Pathe of France and Norris of Germany. •

### Wilding Declares Stock Dividend; Sales Increase 45% in 9 Months

☆ A five per cent stock dividend will be paid shareholders of Wilding, Inc. on February 10, 1967. The shares will be available to owners of record January 6 and the dividend, according to president Robert C. Ausbeck, is based on "the substantial profit being generated in the current year."

Wilding sales for the third quarter of 1966 were up sharply to \$5,387,881 from \$3,283,079 for the same period in 1965. Profit for the period was \$361,248 or 86¢ per share. Cumulative figures for the first nine months of 1966 show a sales increase of 47 per cent and a three-quarters' profit of \$1.36 per share as compared to a 91¢ per share loss in the comparative nine months last year.

Contributing to the increased earnings of this Chicago-based producer was the TV commercial division and the company's newly-formed color film processing division, Mid-America Color Labs. •

### Sawyers Inc. Now a Subsidiary of General Aniline & Film Corp.

☆ Sawyer's, Inc., manufacturer and distributor of slide projectors, scenic slides, stereo viewers and reels, has been acquired by the General Aniline & Film Corporation. Dr. Jesse Werner, chairman and president of GAF, said that the business will be conducted by Sawyer's Inc., a new and wholly-owned subsidiary of GAF. The company's present management, headed by Robert V. Brost, will continue to direct its operations from its Portland, Ore. offices. •

Services and Service—two words that can make a big difference  
 in your motion picture work. spells out the diversity of film  
 mechanics an organization has available. It states the amount of  
 equipment and size of facility. Complete equipment and large facility  
 we have—in every phase of film work—at one location in Kansas  
 City.

on the other hand, has a slightly different connotation.  
 People supply service. We have them too, over 250 creative and  
 technical staff people. They are trained, conscientious people who  
 bring creative effort to even the most mechanical operation. They  
 get involved. They like to do things right—and right away.

Remember this: when you need motion picture services—or service  
 —you need Calvin Productions, Inc. Our clients come back. How  
 might we best serve your film needs?

## SIGHT & SOUND

### Pelican Films Premieres "A Nose" Its First Theatrical Short Subject

A nose made news in Manhattan last month as Pelican Films, Inc., New York film producer, showcased its first entertainment film, *A Nose*. The 10-minute theatrical color film is based on Nicolai Gogol's short story classic, *The Nose*.

Pelican commissioned its own animation staff to produce the short film as a creative exercise in translating commercial television techniques to a non-commercial entertainment form, according to the company's president, Joseph Dunford. The newest and most effective film techniques, in his view, are found in today's television commercials.

*A Nose* was featured with the new Jack Lemmon film, *The Fortune Cookie* at the Trans-Lux East in midtown Manhattan. It includes an array of visual and filmic techniques of special interest to professionals, Dunford noted. "But these are also the same techniques which create special audience impact," the producer said. Story line progression takes viewers

There's a happy finale in Pelican Film's adaptation of Gogol's short story as "The Nose" returns to its rightful owner after misadventures.

from that unhappy moment when a man awakens to find his nose gone to the happy ending when it returns, moving through a blend of live action inserts in what is primarily a cartoon format.

Dunford shares screen credit with Jack Zander, executive vice-president of Pelican, his co-producer. Other staffers involved in the production were Mordi Gerstein, designer and director; Harry Chang, editor; Irwin LaPointe, assistant director; Al Rezek, cinematographer; and Harold Seletsky, composer and conductor.

Ideas for other creative films are being considered for production during the coming year.

### Don Lloyd Named European Representative of Modern T/P/S

☆ The appointment of Donald W. Lloyd as the European representative of Modern Talking Picture Service, Inc. has been announced by that company's president, Carl Lenz. Lloyd's headquarters are at 385, The Strand, in London. He will provide liaison for U.S. film sponsors interested in European markets and will also

Donald W. Lloyd: in London

promote U.S. and Canadian distribution of films originating in Europe.

In addition to his duties with the parent company, Lloyd will

represent Modern Learning Aids the educational division of the international film distribution firm Modern is a charter member of Inforfilm, international association of informational film distributors

### Macmillan Publishes Book Based on Johnson's Film "To Be Alive!"

☆ The Johnson Wax motion picture, *To Be Alive!*, widely-acclaimed "hit" of the New York World's Fair and now destined as a permanent exhibit in that company's new Golden Rondelle Theater at its Racine, Wisconsin headquarters, is the subject of 96-page pictorial-color book being issued by the Macmillan Company.

The Macmillan book of the same title will contain 214 illustrations, more than half of them in color and will retail for \$4.95. Additional text has been written by Alistair Reid. The film was recently honored at the Edinburgh Film Festival and shown in its new 70mm composite version at the 7th International Industrial Film Festival in Venice, Italy.

### "Pictures of the Year" Coming Up

☆ The year's outstanding films are featured in our annual review of 1966 Awards programs in these columns next month.

## *Creativity in films often means seeing the familiar in a new way!*

The evolution of Super 8 Film presented a new challenge to Colburn technicians . . . namely, to process the new film on our existing high performance laboratory equipment without acquiring completely new processing machines.

The answer is our duo drive-sprocket (shown in close-up). The small sprockets accommodate the new Super 8 film perforations and the large sprockets handle standard 8mm and 16mm film perforations.

For more information about our Super 8 laboratory services write to:

**GEO. W. COLBURN LABORATORY, INC.**

# New for long throw situations: A 16mm Autoload<sup>®</sup> that gives you 4 times more light output than any Mazda projector.

**The BELL-HOWELL touch:** we've built a 16mm projector so bright, you can use it for any auditorium or long-projection situation. So bright, you can always count on it for consistently sharp picture quality and vivid color rendition.

It's our new 566 Autoload. It produces 400% more screen brightness than conventional Mazda system projectors because it's the first to use G-E's new Marc 300 arc quartz Lamp.

The 566 is truly portable. The separate lamp power supply unit travels right along with it. We've designed an exclusive push-button changeover system to let you operate two projectors for uninterrupted multiple-reel programs. And a wide complement of lenses is available for complete projection versatility.

All these advances, combined with our Autoload automatic threading system, make the 566 Autoload Projector an extremely versatile audio-visual device. And that's what the Bell & Howell touch is all about: anticipating your needs, and building precision products to meet them.

Your Bell & Howell Audio-Visual representative will be glad to answer your inquiries.

The 566 Autoload gives you the extra light output you need to handle extremely long projection distances.

 **BELL-HOWELL**

# 5 Unique Powers of the Film Medium

## WHY FILM?

Ask yourself what other medium guarantees full attention to your entire message. No print advertisement, no TV show, no brochure, not even the most hypnotic salesman can persuade a prospective customer or an unbeliever to sit quietly for 5 to 30 minutes and concentrate on your message.

Thanks to this unique environment, film can get your message over in the right logical progression of the message-points — without the prospect being able to interrupt, or worse, to skip ahead.

Film doesn't need to waste precious time on attention-grabbing "stoppers," because the viewer is already seated and attentive.

Film "carries its stinger in its tail," i.e., in its residual impression, and hence is free to implant important, though sometimes quiet, foundational material up front, with a solid effectiveness impossible in any other medium.

Finally — and perhaps most important — film implants its impressions in the form of picture-images. And since people tend to remember what they see better than what they hear, the impressions burned into their minds via film have a better chance to endure — to inform, persuade, inspire . . . and compel action: to motivate. — Cap Palmer

• • •

Ask Parthenon for loan prints of any of our pictures. Or let our people screen them for you in New York, Chicago, Detroit, or California. (We will suggest competent film-makers in other areas.) Telephone Parthenon Pictures at (213) 385-3911 and ask for Cap Palmer.

# Did you ever ask Johnny's teacher what she wants?

**We did.** She surprised us, too.

Our business is the distribution of PR films, filmstrips and other industry-sponsored materials. Not long ago we decided it was high time we got in touch with the nation's home economics teachers. Among other things, we wanted to know in what teaching areas industry-sponsored films were *most* needed.

They told us: Marriage counseling, sex education and family relations, in that order. But they also need more supplementary materials—study guides, take-home booklets and the like. As we said, there were some surprises. For instance, home ec teachers prefer *long-running* films, 30 min-

utes and more.

We also asked about 1,500 travel agents a few things, such as "*Do travel films sell tickets?*" (Would you believe, 73% said YES.) We got some feedback from TV programmers, too. We learned that if a PR film was originally televised in black and white that it's got a bright new *color-full* future!

The things we found out are yours. We've got the results of three important surveys in booklet form. Just fill-out and mail the coupon below. You'll also receive a brochure on our new and growing *Materials Mailing Service*.

WITH 215 Awards shared by 93 industrial motion pictures, 18 slidefilms and 104 television commercials at the International Film and TV Festival of New York there were prizes for almost everyone at this event. This year's festival was held October 13 and 14 at the Americana Hotel in New York City. It is privately-sponsored by Herbert Rosen and Industrial Exhibitions, Inc.

Four top prizes (grand awards) were presented to the American Optical Company for its motion picture, *Nature Remains*; to the Bank of America for its *Timeplan Sound Slidefilm Training Package*; to VPI Production for the Chevrolet TV commercial, *Fusion*; and to WGN-TV of Chicago, for the public service television program, *Heroes of Viet Nam*.

**Producers With Multiple Awards**

Among the multiple award winners for outstanding films entered in this event were Audio Productions, The Chartmakers, Svensak AB Nordisk Tonofilm of Stockholm, and Wilding, Inc. Each of these companies received four medal awards. Vision Associates

**215 Awards at Film & TV Festival of N. Y.**

**Honors Abundant at New York Event, But Grand Prizes Go to American Optical, Bank of America, VPI and WGN-TV**

was the winner of three medals.

A gold medal award went to the Metropolitan Life Insurance Company for its sales presentation, *I O. W. A.* and in the training film category, Worley Thorough Productions, of London, received a gold medal for *BMC Insight No. 3* produced for the British Motor Corp. Bear Films also received a gold award for its public service slidefilm entry, *Mother & Child in Modern Art*, sponsored by Clairrol.

**Other Winners of Gold Medals**

The gold medal award for public service motion pictures went to Audio Productions, Inc. for *The True & The Just*, sponsored by the State of N. Y. Departmental Commission for Court Administration. Wilding Inc. received this top prize for *Jet Cargo* sponsored by Alitalia Airlines and the public relations' gold medal winner in this industrial film category went to International Telephone & Telegraph

Co. for *Images to the Future*.

Also worthy of note were gold medal awards to Seneca Productions for *Search* (scientific research category), sponsored by General Motors Research Lab; and to MPO Productions for the Kennecott Copper film, *Copper*.

**Slidefilm Receives Silver Medal**

Among the numerous winners of silver medal awards, a stand-out public relations' slidefilm, *The Trials of Little Nell*, produced by Cal Dunn Studios of Chicago for Blanco, was noteworthy.

A two-day seminar and workshop titled "Tomorrow's Techniques Today" was held during the festival program. Dr. Charles E. Swanson and Ugo Torricelli showed new approaches to filmed media in their presentation, "Toward Emotional Power in Film." The use of computers to lessen much of the tedious work in the production of animated films was demonstrated by Dr. Edward E.

Zajag of the Bell Telephone Laboratories.

For agency men and sponsor who attended, Stockton Hellfried speaking for the Code of Authority of the National Association of Broadcasters, explained the new standards recently adopted to deal with disparagement in television advertising. Industrial designer consultant Will Szabo described films which will be shown at Canada's forthcoming Expo 67, opening in Montreal next April. Al Rogers chaired a discussion of the relative merits of 8mm magnetic v.s. 8mm optical sound films and reviewed equipment currently available.

Festival awards were announced at the concluding banquet on October 14 by t.v. commercial spokeswoman Pat Brody and Gloria Okon. Film narrator Peter Thomas was the master of ceremonies at this final program event.

would like to show you!

**WHAT'S THE PITCH?** The term "pitch" and its effect on screen quality needs clarification. American Standard PH22.56-1961 on "Nomenclature" defines "pitch" as follows: "The perforation pitch is the distance from the bottom edge of one perforation to the bottom edge of the next perforation, measuring along the length of the film." After dictating this, I asked my secretary if she now understood what pitch is. She said "Of course, it's the size of the perforation." If my secretary, who claims she is always right, has misunderstood we should make it clear that pitch is *not* the size of the perforation, but refers to the distance between the perforations plus the height of one perforation. The perforation pitch for 35mm positive is 0.1870 inches, 35mm negative is 0.1866, 16mm positive has a pitch of 0.3000, and 16mm negative 0.2994.

Does this mean that one foot of positive film is longer than one foot of negative? Actually this is true, 40 frames of 16mm positive is exactly 12 inches long; 40 frames of 16mm negative is 0.024 inches shorter than 12 inches. Why the difference?

On continuous contact printers, both developed negative and positive raw stock are transported by a precision sprocket across the printing aperture, illuminated by a lamp inside the sprocket. The original negative is against the sprocket, emulsion out, with the positive raw stock on the outside, emulsion in. The original negative fits precisely on the sprocket teeth. Because the positive material threaded on top of the negative is farther from the center of the sprocket, the positive perfs must be farther apart. If, however, either film does not fit perfectly, then we have motion between the two films which causes loss of definition. If we attempt to print from *negative pitch* material to *negative pitch*, or *positive pitch* material to *positive pitch*, then we encounter film slippage. If we were to print *positive pitch* material next to the sprocket to *negative pitch* raw stock on the outside, neither film would fit the sprocket teeth. This creates the worst possible condition.

Normal procedure in 35mm black and white is to make a master positive (*positive pitch*) from the original camera negative (*negative pitch*). Now, however, we print our master positive (*positive pitch*) to dupe negative material (*negative pitch*). This step is the offender, for we have now lost definition. However,

if we want maximum quality, order the dupe negative printed on a step printer. The pitch problem is eliminated because both films are pulled down the exact same amount by a pull-down claw—not a sprocket. The step printer, however, is very slow and results in higher printing costs. But it's worth it!

Now, let's take up 35mm color. The original color negative is printed to a color intermediate positive, but this time the intermediate positive stock is *negative pitch*! Now, if we print the color intermediate positive (*negative pitch*) to a color intermediate negative (*negative pitch*), we have two steps in which printing losses occur. In these instances, however, the losses are slight. We could do both operations on a step printer, but here is another bottleneck. We know of no manufacturer who makes a step printer incorporating scene-to-scene color balancing by the additive method. A few labs have engineered their own, but very few exist.

For 16mm black and white original negative, we have the identical problems we have in 35mm black and white. In 16mm color, however, we eliminate a step. We shoot on 16mm Ektachrome Commercial (*negative pitch*) and because this is a reversal film and has a positive photographic image, we can eliminate the intermediate master and go directly to color internegative (*negative pitch*). The slight loss incurred we can tolerate. Step printing here again would help the quality of our image, but the additional cost may not be justified.

Too often in 16mm title overlays are exposed on *positive pitch* raw stock and cut into A&B rolls for double printing. The result on the screen can only be a title that weaves up and down in relation to the scene. High contrast positive (*negative pitch*) could be used, but here is another disadvantage. This film has very little exposure latitude, and we are introducing a black and white emulsion with color original which has a different thickness and pliability when moving across the sprocket. This can cause unsteadiness. The solution—shoot all title overlays on 16mm Ektachrome MS. This film has sufficient contrast, blacks of high density and tremendous exposure latitude. Because it is *negative pitch* and the same thickness and pliability as Ektachrome Commercial, it is ideal.

To conclude, when planning your production procedures, always make the right "pitch."

From the pioneers of rear-screen projection

## Advanced audio-visual film projection systems

### SLIDES

BUSCH Cine-Slide Projectors have many special features, including: Big 14" x 14" built-in Daylight Screen; 80-slide capacity; automatic or manual operation with Kodak Carousel projector. Available with or without sound unit. The Busch Cine-Slide Projector is versatile, dependable, portable and lightweight.

### 16 MM

BUSCH Cinesalesman self-contained, continuous 16mm projectors are dependable, portable, versatile. Available in variety of models to meet any requirement for continuous or rear-screen projection. Unit has 20 years of proven performance with many patented, exclusive features found only on world-famous Busch Cinesalesman projectors.

### BIG SCREEN

The Big Screen 16mm continuous BUSCH Cine-Educator Projector is dependable, self-contained, mobile and beautifully finished in Walnut Formica. Special features are: push-button start; automatic cycling stop; auxiliary cooling system, and high-quality sound. Heavy-duty projector units with many exclusive features. This unit can also be supplied with Slide Projector in place of the 16mm Projector.

### SPECIAL UNITS

We have 25 years of experience in the design and manufacture of complete Audio-Visual systems for schools, business and government. We can engineer and manufacture any requirement you may have for Special Projection devices or systems such as multi-screen projection systems, synchronized projection, complete remote control or projectors and many others.

## Museum Showcase for Outstanding Pictures

"Wednesdays at Noon" Series Well-Attended in New York

NEW YORK CITY'S Museum of Modern Art, with increasing awareness of all aspects of the film medium being exhibited by its Department of Film, has been sharing some of the nation's best in sponsored motion pictures at a well-attended series of "Wednesdays at Noon" showings in its auditorium.

The films, sponsored by business, government and non-profit foundations (and including award-winning television commercials), were selected for their "artistic and technical merit" by Margareta Akermark, associate director of the Department. They were submitted by members of the Film Producers Association of New York and by other companies specializing in the sponsored film field.

### They Helped to Select Films

Cooperating with the Museum in assembling the programs for this noon-hour series were Harold Klein, executive director of the FPA and Wallace A. Ross, director and organizer of the American TV Commercials Festival.

Among the outstanding films selected for these screenings were the IBM production, *Question Tree*, created by Henry Strauss & Co.; *ESS*, sponsored by the Western Electric Co. and produced by Pelican Films; *Yeats Country*, sponsored by the Irish Government and produced by Aengus Films; and the *Other Side of Kodak*, sponsored by Eastman Kodak and produced by Filmex, Inc.

### Other Pictures on the Program

*Europe Dusk to Dawn*, sponsored by Alitalia Airlines and produced by Wilding, Inc.; *UNICEF Greetings*, sponsored by UNICEF Greeting Cards and produced by the Fred A. Niles Communications Centers, Inc.; and *Behind the Camera With David Lean*, sponsored by MGM and produced by

the Craven Film Corporation, were other well-received offerings.

The roster of excellent films continues with such pictures as *Ages of Time*, sponsored by Hamilton Watch and produced by MPO Productions; *Silk*, produced by Wheaton Gallentine for the Silk Institute; *Litho*, created by Elektra, Inc. for the Amalgamated Lithographers of America; and *Priceless Laboratory*, sponsored and produced by the Douglas Aircraft Company.

### Films With "Taste and Style"

Miss Akermark told the overflow audience at the Museum's first program that "many public relations films, designed for showing to school and civic groups, in theaters and on television, display taste and style and emphasize information and entertainment rather than commercial 'sell.' The television commercial is a modern art form which can be a highly-disciplined one aimed at the maximum of impact in the minimum of time. Each of those to be screened at the Museum lasts only one minute or less."

Sponsored films and television commercials have been shown at the Museum for many years. "Prospects for the Film," a special series, was first presented in 1957; "Television USA: Thirteen Seasons," presented in 1963, included t.v. commercials. It now circulates as a special program offered by the Museum.

## Taking Youth Behind the Corporate Scene

Certified Public Accountants' Institute Sponsors "Inc."

**C**URRENT SURVEYS of America's youth groups, particularly among teen-agers and among college students, continue to reveal a distressing lack of real understanding of practical economics, a disdain for the free enterprise system and little knowledge of how a typical company really works.

Helping to do something about this information-lag is the American Institute of Certified Public Accountants, sponsors of a simply-titled new film: *Inc.* This picture is being offered the nation's schools for use in economics, social studies and current history classes.

### Four Company Operations Shown

The film is a documentary, with real people and real-life locations. It was filmed on the spot, in color, at four different corporations. At the Garlock Corporation, several executives recreate a conference at which the sort of cost-price-market decision that typically triggers new production in a free enterprise economy is made.

The decision of a company to proceed from research to development of a product is depicted in scenes filmed at a Ciba Corporation plant.

### Automation's Role Is Pictured

At W. T. Grant and Company, the camera moves through a computer room and warehouse to dramatize the growing automation of the distribution of commodities in the American economy.

Finally, a corporation annual shareholder's meeting is shown as it actually happened when the Beaunit Corporation opened its doors to the CPA film's cameramen.

John Ashworth, Consultant, Education Division, of the AIC-PA, said at the recent New York

Pictured at preview of "Inc" were (l to r): producer Peter Yung, of Nova Studios; screen writer Larry Ravitz; consultant John Ashworth; and Ray Bingham, Association Films.

premiere that *Inc.* was produced in the hope that it might interest young men and women in accounting as a profession.

"CPAs have a natural and vested interest in education in economics," he said. "The reason for their existence as professional men is that they promote reason and integrity in financial affairs. More effective education in economics for the whole public can make their work easier and more effective."

*Inc.* was produced by Nova Studios, New York and is being distributed by Association Films, Inc.

TELEPHONE: (904) 389-2316

"Polaroid"® and "PolaLine"®

## In about four minutes, you can put on a good slide show.

Here's all you do to get a line copy slide:

Click the shutter.  
Pull the tab.  
Wait 10 seconds.

And peel off a fully developed transparency. (Polaroid's PolaLine Type 146-L transparency film is what does it.)

Now dip it into a quick-drying

hardening solution (which comes in a pocket-sized plastic container).

Pop it into a snap-together plastic frame.

Slip it into any standard lantern slide projector.

And the show is on.

For continuous tone subjects, use Polaroid Land Projection Film, Type 46-L. Just click, pull and wait two minutes.

(Elapsed time from click to show—about 4 minutes.)

Both Polaroid films give you bright, sharp, grain-free pictures.

At about  $\frac{1}{3}$  the cost of conventional  $3\frac{1}{4} \times 4$  slides.

So even if saving time means nothing to you, saving money might.

Polaroid Corporation, Cambridge, Mass.

## Meet the Design Engineer

A New Film Details His Challenging Job

**T**HERE IS A NEW BREED of design engineer — part artist, part mechanic, part metallurgist, part mathematician — and above all, an *engineer*. He must work in a world of revolutionary technology and under a wide variety of pressures; if he is working on consumer products he must understand the consumer's need and the realities of the marketplace; if he is working on government defense projects, his decisions may become a matter of life and death.

In order to understand the design engineer — to analyze the various facets of this profession — Penton Publications' MACHINE DESIGN magazine has sponsored a new, perceptive, 28-minute color motion picture, *The Designer*, produced by Pelican Motion Pictures, of New York. The film looks at several design engineers in the various aspects of their jobs, designing items ranging from an electric blender for use by a housewife to a supersonic aircraft — a heavy duty truck to an addressograph machine.

Some of the most pressing problems facing these design engineers today, such as the rapid obsolescence of information gained in their school years, and the enormous amount of new information to be kept up with each week, are discussed by outstanding educators in the field, such as Dr. T. Keith Glennan, of Case Institute of Technology, Dr. Thomas Stelson, of Carnegie Institute of Technology, Dr. B. D. Thomas, of Battelle Memorial Institute, and Dr. I. E. Wallen, of the Smithsonian Institute.

They point out that the fiercest challenge of the design engineer is trying to keep up with the explosion of new knowledge. Discovery rate has outstripped our learning rate. The film shows some of the advanced methods being used to train engineering students today — such as computerized homework and teaching machines, and it envisions information retrieval systems tied to remote electronic libraries that can scan the world's knowledge from Aristotle to current engineering journals — and within minutes.

Penton Publications has two applications for the film in mind. It will be shown to advertisers and prospects to illustrate the kind of people Machine Design is talking to, and it will serve as a vocational stimulation for the entire engineering design field.

*The Designer* was directed by Jeri Sopenan, photographed by William Montgomery, edited by Arnold Friedman, graphics by Ted Lowry, and narration by Burgess Meredith. It was produced by Pelican through Penton's advertising agency, Griswold-Fishleman Co., which supervised the project.

Hollywood: MPO of California, Inc., 800 N. Seward, (213) HO 6-3341—Martin Lancer.

**CONFIRMING THE PREVIOUS REPORT** in these pages (No. 6, 1966, page 12), on October 14, 1966, President Johnson signed a treaty Proclamation respecting the "Agreement for Facilitating the International Circulation of Visual and Auditory materials of an Educational, Scientific, and Cultural Character," known as the "Audio-Visual Agreement of Beirut" which brings the United States into full partnership in this international convention that provides for duty-free importation of educational audio-visual materials.

The President's action permitted deposit of this Government's formal acceptance of the treaty with the Secretary General of the United Nations on that same date. The President previously signed House Joint Resolution 688 on October 8 to implement the Agreement by providing the necessary amendments to United States tariff laws and on October 14, he also signed an Executive Order naming the United States Information Agency to carry out the provision of the Agreement.

#### Culminates 20 Years of Effort

These steps culminated 20 years of effort by the audio-visual industry and government leaders. The world-wide dissemination of these educational materials by American universities and commercial organizations, through private channels of trade, is an ideal complement to this Government's foreign information program, say spokesmen of the U. S. Information Agency.

USIA director Leonard H. Marks, in earlier testimony before the House Ways and Means Committee, described how the Agreement, in facilitating the international circulation of audio-visual materials to an expanded market, will create broader areas of understanding between peoples throughout the world. "The Agreement and related legislation now in effect permits the duty-free importation of motion pictures, recordings, filmstrips, slides, maps, charts, posters, models and recorded videotape, when these materials have been certified as of an international educational character.

#### Expect Greatly-Increased Flow

The duty-free and unrestricted flow of educational audio-visual materials has been possible in varying degrees to about 20 countries, but this formal step by the U. S. Government is expected to double that number and increase the flow many-fold within the foreseeable future. Other countries, some of

## Adoption of Beirut Agreement Facilitates Duty-Free Shipment of Audio-Visual Media

whom were non-participating members like the United States, may now be expected to join the Agreement or to complete formal steps of participation.

Additionally, the action of the

U. S. Government is expected to extend the number of countries recognizing these international certificates to include those lands with whom the United States has "most favored nations" agreements or

### Excerpts from the Statement by President Johnson

**A** LITTLE OVER A YEAR AGO, in my speech at the Smithsonian Bicentennial Celebration, I pledged that we would embark "on a new and noble adventure"—the adventure of international education. One of the five central tasks of this adventure would be "to increase the free flow of books and ideas and art, the works of science and imagination."

Today, I am happy that with the help of Congress, we have taken three major steps forward to fulfill this task.

I am today signing a Proclamation that announces our formal acceptance of the Audio-Visual Agreement of Beirut. This final step is now possible because last Saturday, October 8, I signed a Joint Resolution of the Congress to bring our tariff laws into conformity with this treaty. Today, I am issuing an Executive Order that designates the U. S. Information Agency to carry out the Beirut Agreement for this Government.

The Beirut Agreement removes import duties and every other barrier to the international movement of educational materials of the type called "audio-visual"—classroom motion pictures, slides, videotapes, recordings and the like . . .

I am particularly pleased that we have taken these steps in the year of UNESCO's 20th anniversary. The ideas for which that organization stands are being given fresh vitality and renewed purpose.

We know that knowledge has no international boundaries and that the instruments of learning should be fully and freely accessible to all. We know that ideas, not armaments, will shape our lasting prospects for peace.

(October 14, 1966)

President Johnson signs U. S. Proclamation and Executive Order respecting the Beirut Agreement on October 14. Present during signing ceremony were (left to right): Representative Thomas C. Cratis, Ambassador George V. Allen, Robert W. Akers, Deputy Director, USIA, Frank C. Fubbe, Assistant General Counsel, USIA, Wilbert E. Pearson, Chief, International Communications Media Staff, USIA, Nathaniel Davis, of National Security Council, and Douglas Batson, Deputy Assistant Secretary of State for Cultural Affairs.

similar trade arrangements, such as Great Britain.

The U. S. Information Agency, through its Posts in over a 100 countries around the world, is announcing adoption by the United States of the Agreement and encouraging other countries to seek ways and means to reduce the impediments to the international circulation of educational, scientific and cultural materials. Many U. S. trade groups, sponsors and producers of audio-visual materials who have supported adoption of this Agreement for a number of years are expected to redouble their efforts in distributing their materials abroad in view of the new impetus being given to this export certification program.

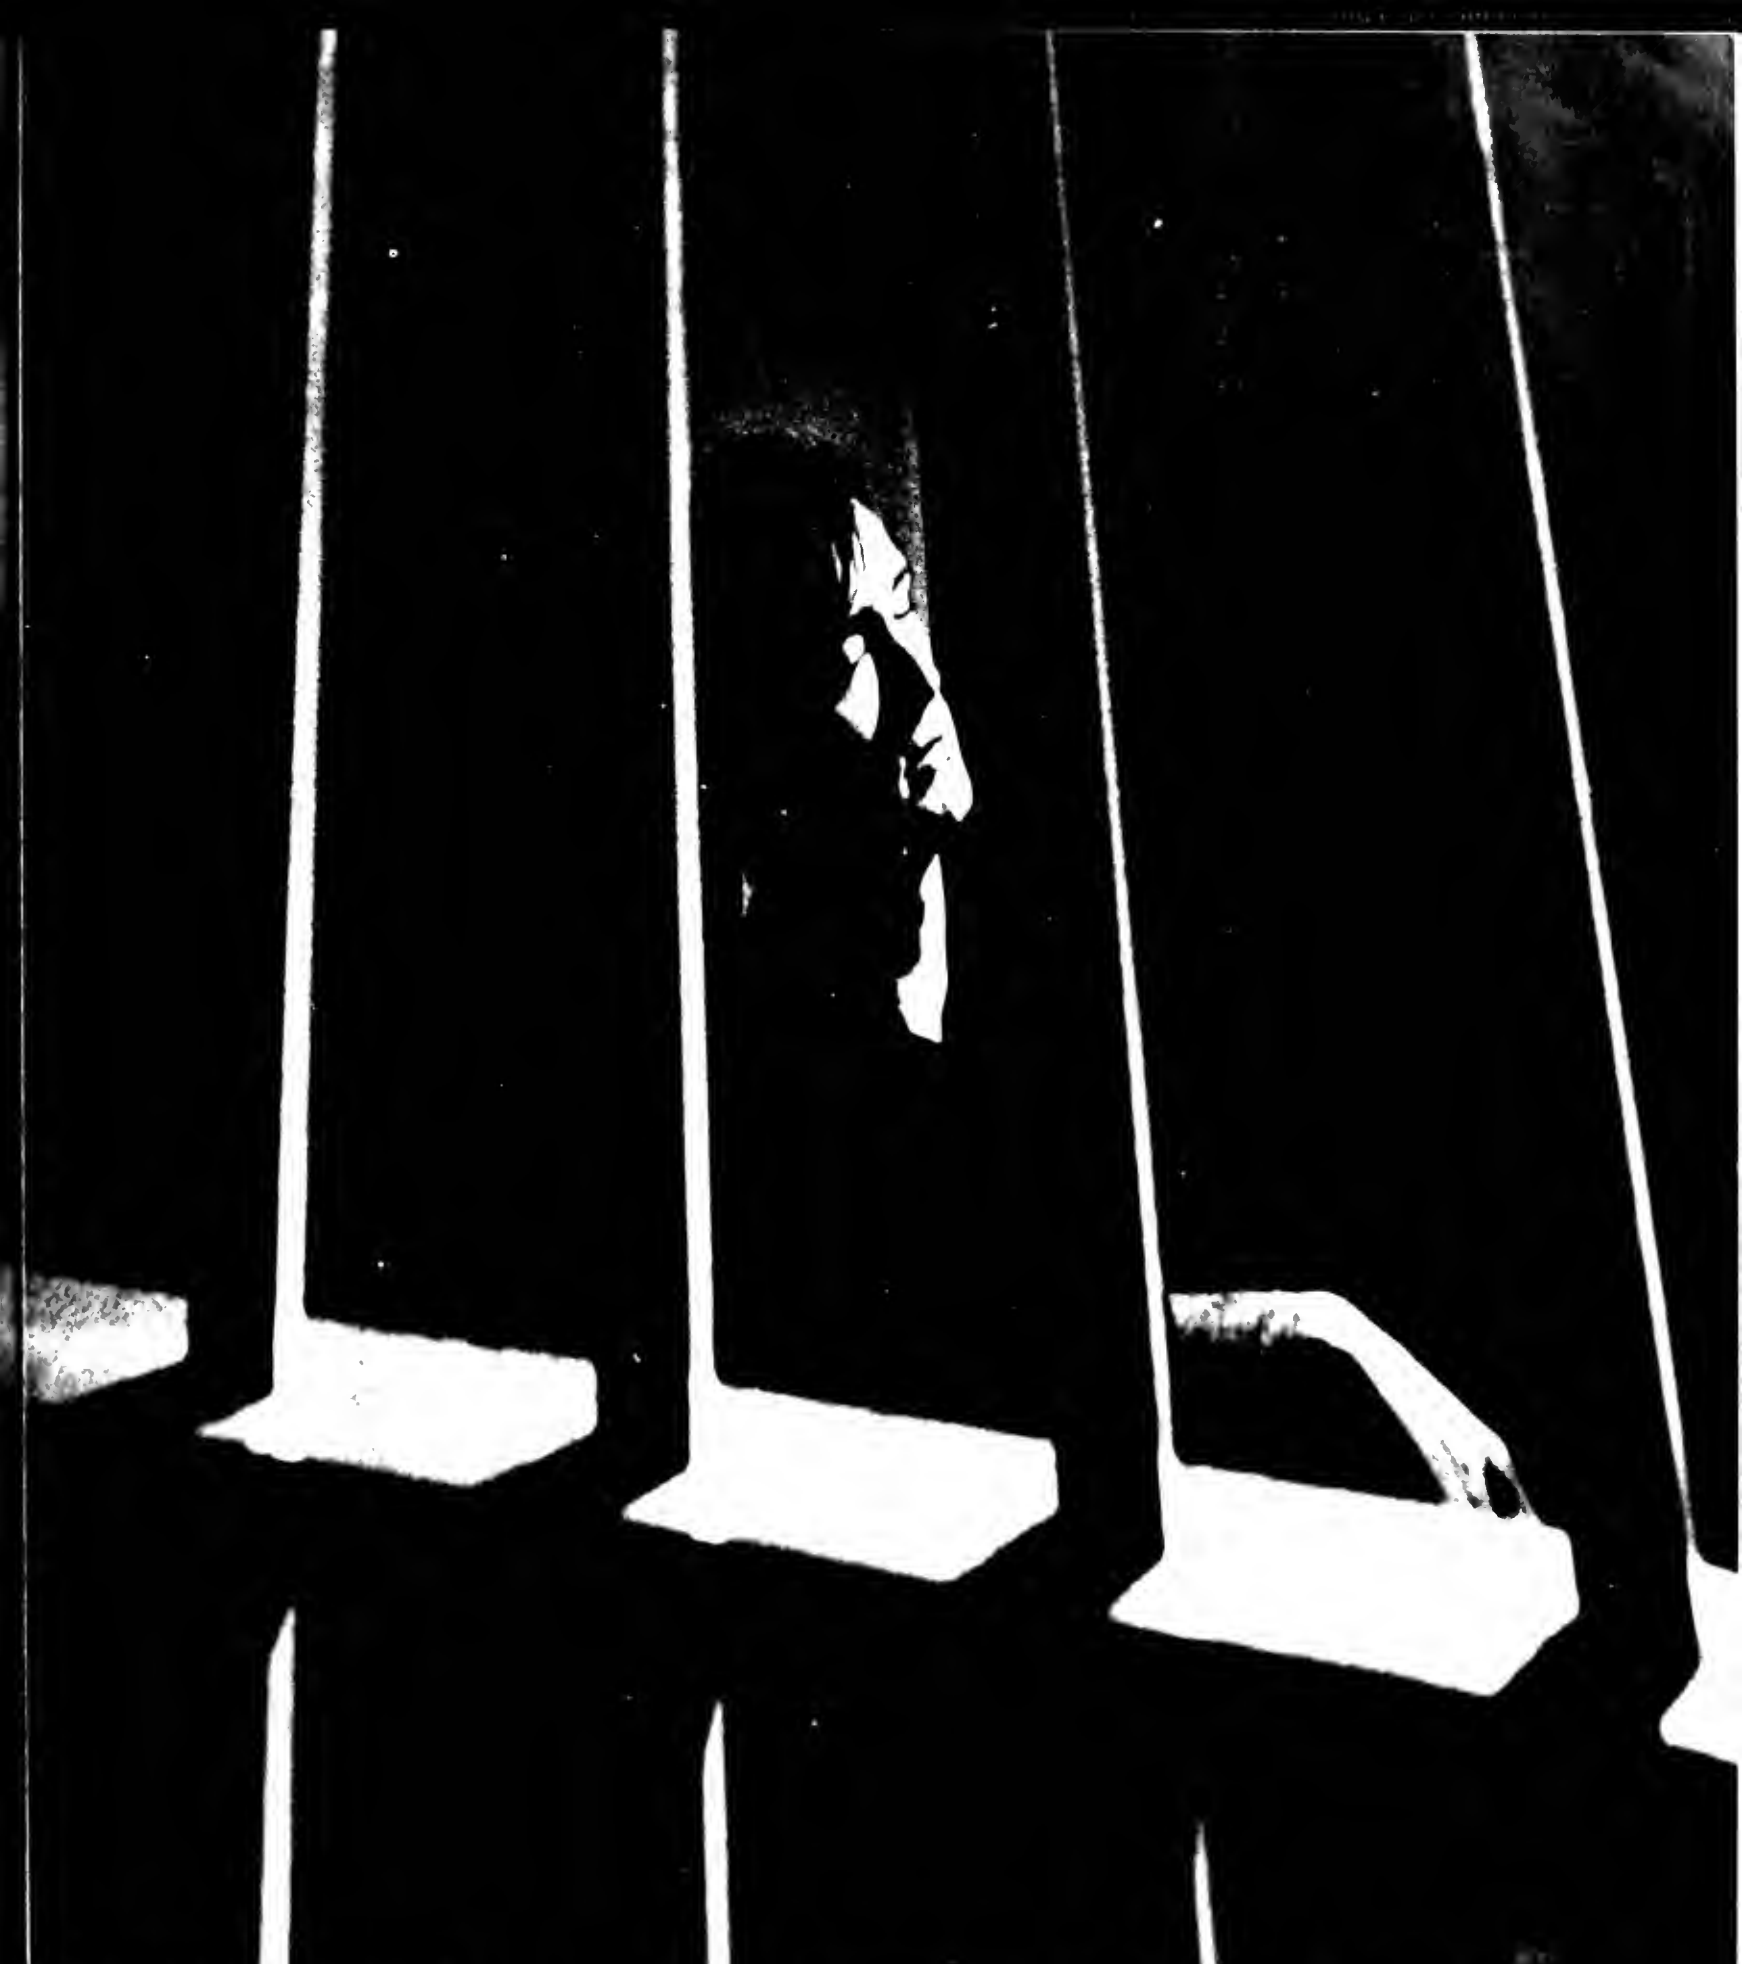

How this affects the business-sponsored media (motion pictures, slidofilms, etc.) was outlined in a discussion with a USIA spokesman by the editor of BUSINESS SCREEN. Basically, the forthright policy of certifying *truly useful* sponsored films of an educational character, will be continued as before by this Agency. Films clearly of an *advertising* content character, promoting a specific product or service, will *not* conform to the Agreement.

#### For Educational, Useful Films

But a large number of sponsored films, providing *useful, informative and educational content* in such international areas of interest as safety education, health and public welfare, medical and scientific motion pictures; technical films providing data on new processes and techniques; films on air and water pollution; food and fiber production methods; office management and office practices; building techniques; and subjects of a like and wide-ranging *useful* character, will, as before, be recognized as eligible for international certification.

Changes in U. S. Customs regulations are expected to follow the adoption of the Beirut Agreement and thus relieve both producers and sponsors of a long-standing problem in clearing their materials and receiving them in return from abroad. The Agreement is expected to be in full effect shortly after January 1, 1967.

Member states now fully participating include: Brazil, Cambodia, Canada, Denmark, El Salvador, Ghana, Greece, Haiti, Iran, Iraq, Malagasy Republic, Norway, Pakistan, The Philippines, Syria, Trinidad and Tobago, Yugoslavia and the U. S. Inactive member states are: Afghanistan, Dominican Republic, Ecuador, Lebanon, The Netherlands, and Uruguay.

Our European Editor, Peter Rigg,  
Reviews the 7th Industrial Festival

**T**HE ANNUAL INTERNATIONAL industrial film festival is the nearest approach to a regular exhibition of free enterprise industrial achievement. Although a film festival can do little more than lift a corner of the curtain on industrial technological and social developments — it does present a first hand view.

This year we were able to gain a better understanding of the motives which prompted the sponsorship of the 127 films exhibited by over 100 organizations from 18 countries, thanks to a regulation which now required the publication of the purpose of the films and the audiences for whom they are intended. This important innovation enabled us to view the films in their true perspective, not merely as films but as instruments of industrial communication.

### Sponsors Were Average-Size Companies

An interesting fact is that the majority of sponsors were not the giants, but *average-sized firms* — only 20 of FORTUNE magazine's U.S. and overseas top firms had films in this competition.

66 films were clearly designed to assist the sales effort, mainly of capital goods and projects. This contrasts with less than 40 such films shown at Rouen last year.

Nevertheless the big public relations "achievement" films still have an important role to play. In parts of Europe and the developing countries, for example, people who are "catching up" like to see industrial and commercial achievements on their cinema and TV screens as part of their entertainment programs.

### Some of the Memorable Films at Venice

In every Festival a number of noteworthy films stick in the memory, either for their subject matter, or their filmic qualities, or a combination of both. The saying that "a film is the nearest thing to being there yourself" is especially true of *Jungle Road* sponsored by the Swedish Scania-Vabis truck manufacturer. In the film you travel a 1,000 mile earth road from Belem in north Brazil to Brazilia in the

# film cost: \$600<sup>00</sup>

# tape cost: \$60<sup>00</sup>

What actually happened. An industrial photographer was commissioned to do group interviews to answer a key marketing problem for a small appliance manufacturer, and found his costs for film ran \$600 per hour, for tape \$60.

Film needs special lighting, special technicians, special settings. Tape doesn't need special anything. It can be a one-man job, and you can use ordinary room light.

Film requires special processing and waiting for rushes. You have no hope that what you shot is what you want.

Tape is instant. You see what you're shooting—right while you're doing it! And tape is erasable, so you can stop the camera, back up the tape, and fix what you don't like.

In short, tape lets you do more. Faster. And for far less money. And Ampex brings you the best in video recording equipment. Ampex invented video tape, and over 80% of tape equipment now in use is Ampex. You can get the basic recorder for as low as \$1450. Less than \$6000 for a mobile "studio unit" complete with camera, lenses, tripod, microphone, recorder, playback monitor, speaker, tapes, the works.

SEND US THIS COUPON TODAY. LET US SHOW YOU HOW YOU CAN SAVE VALUABLE TIME AND MONEY WITH AMPEX VIDEO RECORDING.

## AMPEX

Ampex Corporation, 2201 Lunt Avenue

cabin of a truck. The effect of realism is so great that you can almost taste the dust — and for potential truck customers, no further demonstration of ruggedness is needed!

*Steel & America*, sponsored by the American Iron & Steel Institute, represents a breakthrough in its interpretation of a major industry to the public. This film really puts over the significance of steel to a nation's development in a brilliant combination of cartoon and live action created by Walt Disney.

### Midland Bank Describes Trust Services

Three British films revealed a trend to interpret commercial and social information in terms of dramatic photoplays.

*Why Not Uncle Willy?* was sponsored by the Midland Bank to inform middle-to-low income groups about the services offered by the Bank's executor and trustee department. This is a delicate subject, tactfully handled through a montage of dramatic incidents designed to remind people of the need to make sensible provision for their future and that of their dependents. *The effectiveness of its treatment is that in the first nine months of showing it has contributed to an increase of nearly 20% of the business of the Midland Bank's executor department.*

### Dramatic Story of Industrial Security

To punch home the need for businesses to take precautions against theft, *The Stable Door* sponsored by the British Insurance Association, gained a well-deserved award. This was a dramatic reconstruction of a gang raid on a warehouse, in stark black and white, which

is used, among other outlets by the British police in the interests of crime prevention.

*And then there was One* presents four case histories — of a salesman, a factory worker, a housewife and an office manager — to help in the recognition of depression as an illness which is commoner than diabetes or epilepsy. This important mental health film was sponsored by the pharmaceuticals firm Allen & Hanbury.

### Bright, Colorful "Palette of Fashion"

A number of films from Germany reveal new thinking on the part of sponsors and producers. Earlier German films tended to be grandiose, distinguished by brilliant lighting and camerawork, but with too little "heart." *The Palette of Fashion*, which gained the Inforfilm award for the film best suited for international distribution, deserved that honor accorded the sponsor Farbwerk Hoechst. The film is a riot (CONTINUED ON THE FOLLOWING PAGE 52)

## THE INDUSTRIAL FILM AT VENICE:

(CONTINUED FROM THE PRECEDING PAGE 50)

of haut couture and a *must* for women's audiences, who will unconsciously learn that all this colour is due to progress in dye making.

Top sponsor of the year was the Dutch firm Philips, represented by six films which won three awards for Holland. Top producer was World Wide Pictures (of Britain) with prizes won for two countries as *Physics and Chemistry of Water* (Unilever) won honors for Britain and *Barbarota* (Philips) scored for Holland.

Imaginative Sponsorship by BP, Esso

Credit for imaginative international sponsorship is divided between British Petroleum and Esso. B. P. had four films representing Belgium, Denmark and France — Esso had two films, representing Denmark and France. The techniques used by these highly-experienced sponsors provide a valuable insight into the ways in which the film medium is used in the competitive European market.

In France, the emphasis is on films for entertainment to be shown in the cinemas or at prestige invitation showings. B.P.'s French film was *Au Large du Desert*, a charming picture about crayfish fishermen and their little boats off the coast of Mauritania, Esso's film was *Sud-Ouest*, third of a series of 14 films looking at France from a helicopter. In Belgium box office audiences have enjoyed B. P.'s *Les Voyageurs*, a little film about a pigeon fancier, his thoughts and feelings — and they see the BP symbol in the credits.

Danish Films Note Importance of Trade

In Denmark, however, both companies adopt a more businesslike approach. B. P. had *Denmark Goes Industrial*, which informs Danish, and foreign, businessmen that Denmark now exports more industrial end-products than agricultural and dairy items. Another B.P. film is *Seven Seas*, which illustrates Denmark's growing shipping industry. Esso's film *Highways and Byways of Denmark* examines the Danish road network.

The industry best represented at the Festival however was the construction industry — Italy had ten films dealing with gas pipelines in Brazil, hydroelectric projects in Nigeria, a new harbour at Ravenna, a canal in Pakistan, and (CONTINUED ON THE FOLLOWING PAGE 104)

**this is a bird ...  
it cheeps**

**this is a cheap  
color processor  
... it's for the birds!**

We make a line of continuous laboratory processors. They're good.

Sometimes we wonder whether we make them too good. (Apparently some people are willing to settle for less.)

For example, take our color processors for industrial motion picture film.

We could forget that top color performance is essential in sales, training, and educational programs . . . and knock off hundreds of dollars by using low capacity dryers, second-rate heat exchangers, and two-bit controls.

If we did all that (— and more), we could probably sell our processors for 20% less. But would it make sense?

Is it old-fashioned to give every processor the extra dependability that skilled, dedicated craftsmen can build in?

Is it wasteful to test every unit we build to make sure you get all the performance our reputation promises?

Has the practice of providing an honest product at a reasonable price gone out of style?

We don't think so. And apparently a lot of people agree. They figure they get what they pay for. They believe that Treise quality is a bargain. And they've helped us grow to the point where we have designed, built, and installed more Ektachrome Processors than any other manufacturer in the world!

## Men and Events Along Production Lines

Filmexpress Division Established by Filmex, Inc. for Print Service

Robert Bergmann, president of Filmex, Inc., has announced the opening of Filmexpress, a new company division established to guarantee quality color prints and super-speed delivery.

To make this guaranteed service possible, and to provide priority treatment to Filmex customers, Filmexpress utilizes the Universal Studio Optical Division and the new Plant #20 of Technicolor Corporation at Universal City in California.

Staff technicians, working at Filmexpress offices at Technicolor, supervise prints orders from arrival to delivery. They are in contact by tie-line with new Filmexpress offices in New York at 300 East 46th Street.

In making this announcement, Mr. Bergmann said, "Filmexpress, operating with Technicolor Universal can now provide quality color processing in half the usual time. Our recent survey indicates that the move toward color filming and processing of TV programs and commercials is far more rapid than many industry leaders have realized."

Mr. Bergmann also announced new appointments to the Filmexpress staff, and new assignments of Filmex personnel who will plan an important part in the operation of the division.

Stephen Kambourian, vice-president of Filmex Completion, is vice-president of Filmexpress and Patricia Linburn has been named general manager.

Jackie Vaden, formerly a member of the staff of Technicolor Corporation has joined Filmexpress to head the client services department of this subsidiary. •

Manhattan Color Laboratory Is Latest Berkey Photo Acquisition

Berkey Photo Company has acquired Manhattan Color Laboratory, Inc., one of the largest photographic organizations of its kind in New York City, serving producers of filmstrips and slides. Announcement of the acquisition was made by Benjamin Berkey, president of Berkey Photo Company. Manhattan Color is the newest addition to the Professional Services Division of the Berkey Photo Company.

The Professional Services Division combines the total facilities of Manhattan Color Laboratory with those of K & L Color Services, Inc.

The move represents an important phase in the long range planning of the Berkey organization. The consolidation of these firms, each of which has achieved a wide reputation for professional quality and performance will, according to Mr. Berkey, "provide the base for a new concept in the area of total photographic laboratory services." The new division will specialize in color work with particular emphasis given to TV commercials and industrial motion pictures and slidefilms.

Chuck Robbins, president of Manhattan Color Laboratory, said that "we are taking a very enthusiastic approach towards the entire project." Manhattan Color will move to new quarters at 222 East 44th Street, New York, sometime in early 1967, where it will occupy the entire second floor of some 23,000 square feet of space. The modern facility will contain a new and diversified array of slide-film production and processing equipment. •

# NOW...ON STAGE

THE COMPLETE SOUND STAGE FOR PROFESSIONAL FILM PRODUCERS

WARREN BEATTY and FAYE DUNAWAY in Warner Brothers'

## BONNIE and CLYDE

The story opens with Bonnie and Clyde on stage. A complete sound stage. That's where I come in. I'm it. The complete sound stage, that is. And the name's 2. Stage 2. Warner Brothers gave me quite a boost when they came to town. Being new, it's great to have Bonnie and Clyde here.

Just recently Dallas said to me, "Say, 2, you're the only new, 6500 sq. ft. film production facility we've got. And you're air-conditioned! Your 5000 sq. ft. sound stage (with 2100 big amps of electrical power and those frightfully complete lighting facilities), makes you a real drawing card!"

Dallas suggested, "Why don't you make yourself available, 2, to motion picture and TV producers on a rental basis? With or without 16mm and 35mm camera equipment and/or technicians? Tell 'em about your adjacent warehouse facilities for set construction and special effects. For prop storage and shops. Then hit 'em with the big news! The adjacent private parking lot."

So I did. And if you're a professional film producer, I'd like to sell you on my advantages as a production center. Try me. I think you'll like me.

## New Audiovisuals for Business & Education

### This Company's Film Is Helping "Keep America Beautiful"

IN 1965, Jas. H. Matthews & Co., of Pittsburgh, Pa., manufacturers of bronze markers, industrial marking products and box printing dies, purchased one hundred prints of the 18-minute color film, *Heritage of Splendor*. As a public service, the company made these prints available, free-of-charge, for showings to youth and adult groups throughout the country — using Modern Talking Picture Service for their distribution.

In addition, to help promote showings, the company distributed an attractive four-color leaflet describing the film and listing local sources from which it can be secured.

Developed by Richfield Oil Company and narrated by Ronald Reagan, *Heritage of Splendor* emphasizes the importance of preserving America's great outdoors as a national resource for recreation — but warns that the areas are being slowly smothered under carelessly-tossed litter. The film points up the citizens' obligation to preserve our recreational heritage and to help in curbing litter.

To date, the prints have had some 6,100 showings to a total audience of over 350,000 persons, and 2,200 advance bookings now

scheduled run through the current fall and early winter months.

In the words of the advertising manager at Jas. H. Matthews & Co., "There just isn't any let-up!" The film has been shown at vacation resorts, in airports, schools, hotels, motels, Salvation Army homes, yacht clubs, government meetings, churches, chambers of commerce, hospitals, state parks, trailer parks, marinas, restaurants, mission societies, factories, sportsmen's clubs — and even aboard the Cape May Ferry!

Officials of Keep America Beautiful, Inc., speaking of the public-spirited action of Jas. H. Matthews & Co. in making prints of *Heritage of Splendor* available, have said, "We consider this film to be one of our most important working tools and hope that eventually every man, woman, and child in this country views it — because it is the individual who creates the litter problem and only the individual can prevent it."

On November 10th, the Matthews Company was awarded Keep America Beautiful's 1966 Business Award for the company's public education program aimed at preventing litter and preserving natural beauty. •

### Film for Teen-Agers Shows Value of Career as a Doctor

☆ A new motion picture designed to help alleviate the critical doctor shortage was premiered October 10 at the Annual Scientific Assembly of the American Academy of General Practice (AAGP) in Boston.

*Someone You Can Trust — Someone You Can Be*, a 29-minute color film, encourages high school students to consider a career as a medical doctor. The film was sponsored by Smith Kline & French Laboratories for the AAGP, and was filmed by Calvin-DeFrenes Corp., of Philadelphia.

Lensing scene for "Someone You Can Trust—Someone You Can Be" produced by Calvin DeFrenes Corp.

It is designed for use in the Academy's new physician recruiting effort: the Family Practice Careers program.

According to AAGP Executive Secretary Mac Cahal, *Someone You Can Trust — Someone You Can Be* is part of an on-going effort to help solve the physician shortage facing this country. Cahal points to some statistics that reveal the extent of the problem.

"In 1900, there were 150 doctors for every 100,000 population, today there are but 130," Cahal said "Despite the fact that each day headlines proclaim new medical miracles, nearly 20 percent of the medical internships available at U.S. hospitals go unfilled each year. Medicare and other government health programs will further increase the need for trained physicians."

The Family Practice Careers program is a national medical recruiting effort encouraging physicians in comprehensive, national program of interesting young people in medical careers. •

### New York Power Authority Film Reviews Hydro-Electric Progress

*Tale of Two Rivers*, a new filmed documentary about hydro-electric power on the St. Lawrence and Niagara Rivers, is the culmination of a series of films sponsored by the New York State Power Authority that began in 1957 with *The St. Lawrence Power Project* and continued into 1960 with *The Niagara Power Project*. The present film, telling the story of both projects, represents the selection of the best footage from ten years of on-site camera work — over 150,000 feet of construction scenes from ground-breaking to completed power plants. Producer of the films is John Campbell Films, Inc. Association Films will distribute the 22-minute color film to general non-theatrical audiences, principally in New York State.

An address by James A. FitzPatrick, chairman of the Power Authority, opens the film; animation sequences depict how the projects were designed and how they work. The construction sequence, for example, covers nearly a decade of operations — from first land-clearing, through excavation of millions of cubic yards of earth and rock, form-building, concrete-placing, turbine and generator installation — to finishing phases. It concludes with the distribution and marketing of over 2½-million kilowatts of electrical power. Over a billion dollars has been invested in both projects, financed by the sale of bonds and involving no tax money.

The new *Tale of Two Rivers* is expected to appeal to schools, engineering societies and local civic groups in the St. Lawrence-Niagara area. The film has a strong educational slant and demand from schools is expected to be heavy.

Ed McCloud, Al Mellett and Herman Kitchen did photography; Jack Campbell wrote the script; Bob Velazco scored the music; George Bryan narrated; and Gary Hampton, served as production assistant. •

### Conservation Department Offers Film on New York's State Parks

A new film, *New York State: Year 'Round Playground*, is now being offered to churches, clubs and schools, and on television throughout New York State by the State Conservation Department.

The story is narrated by a Forest Ranger who makes an appeal

for the outdoor life. "Give me the lakes and streams, earth and rock," he says, "for here is the raw material for your re-creation."

Out of this raw material of nature, the state has fashioned her great system of parks, with one to be found not more than an hour's drive from home. The film invites the viewers to "Take an hour, a day, a week," and partake of the outdoor refreshment the State Parks offer, in any season of the year.

The film is fast-paced, with lively, spirited music throughout. There is a minimum of narration. The pictures and music tell the story, with only an occasional comment by the narrator. It closes with a strong plea for conservation. "There is in all of us," the Ranger says, "the yearning to refresh our souls with the grace of Nature: to touch earth and rock, sea and sky. We must make of these our heritage, our will and testament, for generations yet to come."

The film was produced by John Campbell Films, Inc. Herman Kitchen did the photography, Bob Velazco furnished the music, Phil Santry was art director, and Jack Campbell wrote the script. •

### Three National Geographic Films Available to Groups from Aetna

☆ Three National Geographic educational adventure motion pictures are being made available on a free loan basis to clubs and other community groups as a public service of the Aetna Life & Casualty Company.

The color films, *Miss Goodall and the Wild Chimpanzees*, *The Voyage of the Brigantine Yankee*, and *The World of Cousteau*, are 27-minute versions of original network television shows, produced by the National Geographic Society and co-sponsored by Aetna and Encyclopaedia Britannica. They are available from Aetna, Hartford, Conn. to women's clubs, schools, churches and groups. •

## Winners of Overseas Film Festival Awards Honored by CINE at 9th Annual Exhibition

TROPHIES and embellished scrolls, symbolic of awards and meritorious recognition gained by factual motion pictures, short subjects and television documentaries which represented the United States at some 62 international film festivals during 1966 were on display in the lobby of the National Education Association headquarters building in Washington, D. C. on November 18. 140 such awards had been received by that date.

This international response to the work of the Council on International Nontheatrical Events (CINE) culminated another year of volunteer effort on behalf of sponsors and producers as the organization held its Ninth Annual Overseas Awards ceremonies and Exhibition of Films of Merit in the NEA Auditorium and in the theater of the National Geographic Society building nearby.

### Top Awards for 15 Pictures

Top honors won by CINE entries at overseas events this year were presented to 15 American film makers at an evening ceremony. Diplomats from seven countries made the awards on behalf of their nations—representing Argentina, Italy, Great Britain, Canada, Germany, Ireland and France. The presentations followed a afternoon ceremony at which 2 CINE "Golden Eagle" certificates were given producers and sponsors of the films selected to represent the U.S. at international festivals this year. The Council's president, Alden H. Livingston, a prominent advertising executive, presided at both events.

Guest speaker of the evening was Ambassador George V. Allen, director of the Foreign Service Institute and former chief of the U.S. Information Agency. One of the architects of the now-formalized "Beut Agreement" (see page 44), Ambassador Allen cited the work of CINE and its nationwide jury members as in the "best tradition of national citizenship."

### 50 Jurors Screened Entries

The story behind this very full day of awards-giving, film screenings and social amenities, well-organized and smooth-running despite the many events, actually began in the Spring of this year. All across the country some 350 vol-

unteer jurors from business, education, film-making, television and the professions (doctors, clergy, etc.) screened the more than 500 films submitted for overseas festival participation. The 125 "Golden Eagle" winners were the results of their work and of the final screening program held in Washington, D. C., a few months later.

Managing director James H. Culver heads the office staff at

The Honorable George V. Allen, a former USA chief and now director of Foreign Service Institute, spoke at the Ninth CINE awards dinner.

CINE president Alden Livingston thanks dinner guests for their cooperation in CINE's awards programs.

CINE headquarters in Washington, aided by coordinating director Harold E. Wigren. From out of more than 100 international film events now being held, the Council officially participated in 62 of these. This required 400 prints of designated pictures, since a good many films are entered in several festivals within the same time period. Needless to say, the logistics of entry, shipment and recovery of

Audience filled the NEA Auditorium to near-capacity during the evening program which highlighted Ninth Annual Exhibition of Films of Merit.

the U. S. entries are complex and time-consuming.

### Shown Throughout the World

But it all seemed worthwhile as Exhibition Day began on November 18th. The U. S. had again brought together what some have called "our Olympic Team of films" and the rewards of that effort were not only evidenced by the extensive display of shining trophies but through the countless hours of programmed showings of CINE entries throughout the world. From Adelaide, Australia to Venice, Italy, influential citizens in 21 countries saw the best in U. S. documentary, educational and industrial motion pictures.

Other hundreds of people, including heads of government agencies, trade groups, and other Washingtonians filled the NEA Auditorium and National Geographic screening room during showings of 27 award-winning American films and a selected group of live outstanding pictures from overseas.

Of special interest to readers of BUSINESS SCREEN were the top overseas awards shared by such sponsors as the American Iron & Steel Institute (*Steel Is a Farmer and Steel and America*); Eastman Kodak (*A Salute to the Tall Ships and The Searching Eye*); The Girl Scouts of America (*Open Your Eyes*); Jantzen, Inc. (*Study in Wet*); S. C. Johnson & Son (*To Be Alive!*); Minnesota Mining & Manufacturing Co. (*Way Out Men*); The National Education Association (*Children Without*); Sears, Roebuck and Company (*High in the Himalayas*); and United Air Lines (*From Here to There and Ski Country, U.S.A.*).

### Awards to Non-Sponsored Films

Other trophies and prize honors for nontheatrical entries went to Eliot Noyes, Jr. (*Clay*); Churchill Films (*Design in Movement and The Photosynthesis Respiration Cycle*); and Red Parrot Films (*The Ivory Knife*).

Ezra Baker's widely-shown thea-

## CINE'S Exhibition:

(CONTINUED FROM PAGE 61) trical short subject, *Boudoir*, was one of the top award winners and three Wolper Productions, *Frontiers of the Mind*, *The Making of the President, 1964* and *Bay Out Men* were the most-honored television documentaries entered through CINE. Louis J. Hazam's TV documentary, *Ganges-Sacred River*, was the other top award winner in this group.

### Five Awards to "Skaterdater"

Most-honored film of the year, however, was another short subject, *Skaterdater*. Produced by By-way Productions of New York and distributed by United Artists, this film received a grand prize for techniques at the Cannes Festival, two awards at the Cork (Ireland) Festival, the St. Linnbar first prize and the Waterford Glass Award of St. Genesius (patron saint of entertainment). The Edinburgh Festival accorded *Skaterdater* a Diploma of Merit and it received a certificate of participation at Krakow, Poland.

The film earlier received an

"Oscar" from the U. S. Academy of Motion Picture Arts and Sciences in its short subject category.

*The King of Madison Avenue*, produced by Emily Films of New York, took two top prizes — the grand prize cup (first place) at the Rome Electronic and Nuclear Film Festival and a second place (silver medal) at Guadalajara, Mexico.

Highlights of the CINE Awards and Exhibition program included a stirring prelude to the afternoon screening ceremonies. The United States Marine Band presented a brief concert to open the program.

William G. Carr, executive director of the National Education Association, was another honored guest at the CINE awards dinner which preceded the evening ceremonies in the NEA Auditorium. A long-time friend of the organization, he and his staff have lent a helping hand throughout the formative years of this activity.

Reid Ray Was General Chairman.

Credit should be given to Reid H. Ray (and to Mrs. Ray) for services beyond the call of duty. This St. Paul film producer and

former president of the Society of Motion Picture & Television Engineers served as general chairman of the entire program. He was assisted in these many arrangements by CINE vice-presidents Anna Hyer, Tom Hope, J. Edward Oglesby and Willard Webb. The secretary of the organization, Peter Cott, introduced the award-winning films at the Exhibition.

A special visitor for the events was Forsyth Hardy, vice-chairman of the world-famed Edinburgh Film Festival and head of Films of Scotland, who flew here to attend the exhibition program.

There was also a special place during the Awards program for the

Peter Crane (left), special events manager, S. C. Johnson & Son, accepts Edinburgh Festival Diploma for "To Be Alive!" from Sydney Hebblethwaite, British Embassy Counselor, at awards ceremonies.

film makers of tomorrow, teenagers who participated in the CINE "Eagle" program. Eight of these youngsters were introduced and their films screened.

### Five Overseas Films Shown

Five outstanding foreign films were included in this year's program, symbolic of the spirit of worldwide exchange to which the organization is dedicated. *Yeats Country* (from Ireland), *Le Paque Matelot* (France), *Contraste* (Germany), *Mosaic* (Canada) and

*City in the Kingdom* (Great Britain) were the films included in this new program event.

The ten films featured on the evening program, witnessed by a large audience in the NEA Auditorium, were: *Michaelangelo*, *The Last Giant*, *Frontiers of the Mind*, *The Ivory Knife*, *The Dot and the Line*, *Kings of the Wild Waves*, *Marty*, *The Boudoir*, *Miss Goodall* and *the Wild Chimpanzees*, *Steel and America*, and *Skaterdater*.

This eventful day was concluded with a reception honoring the winning producers and sponsors, held at the Mayflower Hotel. To this final social gathering came hundreds of film makers and users, government people, members of the CINE Board and staff. It provided a happy finale to a very busy day for all concerned.

\* \* \*

## CINE Office is Now Accepting Entries for the 1967 Festivals

Applications are now being accepted at CINE headquarters (1201 16th Street, N. W., Washington, D. C.) for 1967 festival entries. Deadline for mailing entry forms is February 15, 1967. The handling fee which must accompany the form is \$35; if the application form is postmarked January 13 or earlier, the fee required is only \$25.

An exception is made for films released between January 1, 1967 and February 15. In this case the charge is only \$25. Producers and other submitting films are cautioned not to forward prints until notified as to time and place for the preliminary judging.

If you have not received entry forms, write or call the CINE office above. The telephone number is 265-1136, area code 202 in Washington, D. C.

Guests at afternoon reception which preceded evening Exhibition program included (left to right) Fred Maxwell, director of advertising and public relations at Parke-Davis Company and Mrs. Maxwell, Leonard Yoder of The Jane Haugh Co., producers of award-winning Parke-Davis film, "The Examination" which received prize at this event.

# "THE MANAGERIAL REVOLUTION"

Fifty Turbulent Years of Industry in America Are Related in a Motion Picture Sponsored by the National Industrial Conference Board and Well Worth Showing

1916 was the last year of America's worldly innocence. In politics, international affairs, economics, the simplistic approach that had served for so long would soon no longer be adequate. In coming to grips with the problems that were about to confront the sleeping giant that was the America of fifty years ago, the nation would soon be swept up in a turbulence of new ideas, new concepts, and new realities. A turbulence so great as to assume the dimensions of a revolution. Not one, in fact, but three — three revolutions that were to change the face of American society almost beyond recognition.

An account of these revolutions and of the fifty years of American history since 1916 during which they occurred is offered in a film titled *The Managerial Revolution*.

A Capsule Visualization of Critical Years produced by Henry Strauss and Co. for the National Industrial Conference Board through a public service grant provided by the Hammill Paper Company, *The Managerial Revolution* is a capsule visualization of the most critical years in our history. What the film does, in effect, is trace the course and development of American industry from the Henry Ford-inspired revolution that thrust mass production on an essentially rural society up to and including the complex chain of events that is about to culminate in a man on the moon.

Between Henry Ford and his offer of "any color as long as it was black" and an astronaut in his implied promise of a better life for a new billion people lies a world of change — partly violent, partly peaceful, wholly profound.

## Marked Change in Attitudes Toward Workers

Telling the story of that world and of the changes that rocked it, *The Managerial Revolution* shows that the difference between then and now is deeper than the materialism of better roads, faster cars, more and shinier appliances of every description. We learn, indeed, that this very wave of production itself (and it overcame) the traditional attitudes of business and industry leaders towards their workers as a valuable resource. The realization that workers were more than just additional "raw material for the assembly line" goes a long way towards explaining the managerial revolution. The realization of this realization goes far towards explaining the film which tells the story.

*The Managerial Revolution*, dealing as it does with ideas as well as the events portraying them, gives evidence of careful, even meticulous construction. A fine balance is struck between an intellectual and emotional appeal. The stock footage used in picturing the route followed by industry from pre-World War I days to the present has been selected and or-

ganized with the obvious intent of having each shot do something besides entertain.

The war, the return to "normalcy", the depression, the New Deal, World War II, the atomic age and the advent of the modern scientific revolution, Sputnik, the bewildering complexity of modern life — all are shown in their original documentary portraits as background to what was happening on the industrial scene.

The impact of the "mass production revolution", the birth of Big Industry, the changing

The 1930's saw the rise of Labor and of a new role for Government in U.S. industrial affairs.

## The Managerial Revolution:

(CONTINUED FROM THE PRECEDING PAGE 63)  
niques that was to make possible not only our modern world as it is, but as it can become.

In compressing fifty years of turmoil into 26 minutes of 16mm. black-and-white film, *The Managerial Revolution* owes much to an admirably taut and expressive script. The narration manages both to extend the meaning of the visuals and to focus their impact so that little of importance is left untouched and nothing that is seen is diluted.

### Observes Board's 50th Year of Service

The National Industrial Conference Board, one of the oldest and most important research organizations of its kind, undertook to have *The Managerial Revolution* produced as part of the observance of its fiftieth year in the business of studying business. The Strauss group has come up with a film that is a valuable tool not only because of its intrinsic virtues but because of the versatility of its application as well. To the manager, the supervisor, the employee on the line, the film has something to say about their varied roles in shaping a modern, democratic, industrial society. To interested civic groups or to the high school or college class, the film presents a vital aspect of the many-sided journey we call history.

*The Managerial Revolution* is now in the film library of the N.I.C.B. For information regarding its availability write directly to: The Conference Board, 845 Third Ave., New York City, New York.

### Benton & Bowles, MPO Videotronics Sign Agreement on TV Commercials

Benton & Bowles, New York advertising agency, and MPO Videotronics, Inc., have signed an agreement calling for the granting of volume discounts by the producer upon completion of certain amounts of work during the year. It is similar to agreements MPO has had with J. Walter Thompson and Lennen & Newell for the past three years.

According to an MPO statement, the agreements have proved to be beneficial to the agencies, participating clients and MPO. The basic reason for the agreements is to help the agency solve the problems of creativity, cost and efficiency in the production of their TV commercials. It permits the advertiser to reduce production costs without sacrificing quality.

The agreement provides for the earlier involvement of MPO's staff in pre-production planning. Improved agency studio understanding, increased efficiency, and fuller exploration of the client's concept should result, MPO states.

Those B & B clients who have agreed to participate in this plan will get the benefit of a discount in mark-up which is based on the agency's total annual production volume with MPO.

The plan does not call for any degree of exclusivity. Benton & Bowles will continue to use other producers; MPO will continue to work for other agencies, whether or not they work regularly with the studio.

Viewing traditional garb in a modern setting, Japanese women wear both modern and traditional clothes as they stroll along a display aisle in one of that country's many department stores.

Japan's vigorous economic development is evidenced in the establishment of major department stores throughout the country. In Tokyo, for example, there are now some 20 department stores.

## Advertising's Key Role in Postwar Japan

"Whatever Happened to Mrs. Momiyama?" Asks a Timely New 20-Minute Picture

AMERICAN BUSINESS (and government) can take careful note of the economic miracle wrought in a reconstructed postwar Japan and of the key role which advertising played in making this resurgence of the Japanese economy possible.

A very timely and most interesting new motion picture titled *Whatever Happened to Mrs. Momiyama?* reviews these recent years of Japanese economic progress and offers fruitful film fare for both adult viewers and for the youth audiences for whom it has been created.

Sponsored by the American Association of Advertising Agencies, and distributed by Modern Talking Picture Service, the film explains that the pattern for Japanese progress had already been pioneered in the U.S. and that advertising played an important part in our economy for scores of years, as it now does in Japan.

The film shows how advertising works with mass production and national distribution — with transportation, power, packaging and supermarkets — to make possible our economy of plenty. And it gives the reasons why bright

young people should consider a career in advertising.

*Mrs. Momiyama* is a Japanese housewife who grew up before the war in an economy which taught her to do without. What has happened to her in Japan's booming post-war economy is the theme of the film. Liberal use is made of fast-cut stills in the slide-motion technique used in this film.

Before undertaking nationwide distribution, Modern tested the picture in the Pittsburgh area with five prints and 75 schools taking part. Responses indicated that it was rated as *excellent* by 14 teachers, as *good* by 25, *fair* by 9, and none rated it *poor*. Typical comments ran something like this:

"The parallel drawn between our economy and Japan's and the reasons for this were interesting and tied in with our current class discussions."

"Shows how advertising is important to mass production, how the different factors of production interrelated, and what careers are available in advertising."

"Color, sound and photography are all very good. A dramatic presentation of the important role advertising has had in all our lives."

Further questions answered in the test distribution program indicated that the film was particularly effective in stimulating class discussion. The 4A's have backed up the film with a teacher's guide and booklets on advertising.

Forty prints are now circulating in Modern Talking Picture Service's libraries in twelve major cities. The program is growing as individual companies, advertising agencies, advertising clubs and media sponsor prints for distribution in their own areas. For \$150, prints may be bought, placed in the Modern film libraries and underwritten for free film bookings to schools for a full year.

Distribution of 200 or more prints is the 4A's goal, a modest one considering the sizable number of high schools throughout the U. S.

*Whatever Happened to Mrs. Momiyama?*, 20-minutes, color, was produced by Campbell-Ewald Company, of Detroit, for the AAAA

Lighted tower emblazons Mitsubishi Electric Company's wares as Japanese firms turn to modern promotion tools to spur Japan's economic development.

# "Partners in Profit / Profit for Partners"

ing to the Field With a Well-Planned Program The Kroger Company Shared Plans and Retirement Income Policies With Members of Its Employee Family

THE KROGER COMPANY, a leader in the food distribution field, is the world's fourth largest retailer, employing 57,000 people in the 70 market areas in which it serves. But as in other firms in the supermarket industry, employment is marked by high turnover and with a problem in mind, there was a real need to develop knowledge and understanding by its people of both products and policies.

There are Kroger brand products which have special profit importance to this company. And there is an extremely generous Profit-Sharing and Retirement Income Program, bound to mean turnover if every employee was thoroughly aware of its benefits.

How Could Communication Be Improved?

How do you meet this obvious need for better communication? How do you deliver the message to those who should have it?

In Kroger's case, you set up the objectives and get into action, helped by the best talent you can acquire to package a forthright, convincing program of employee communication. And, if you've planned right, you come up with some really significant ideas and tools. Like, for instance, a motion picture created for your employees that earns the top award of the Society for the Advancement of Management. But that's getting ahead of the story.

Kroger turned to Fred A. Niles Communica-

tions Centers, Inc., to attain their objectives. It was resolved that "Annual Kroger Employees' Meetings" would be held in 22 states earlier this year. Divisional management was made responsible for conducting the meetings but to keep communications uniform, the meeting tools would be provided from headquarters in Cincinnati. The motion picture medium was employed to bring top management executives, the company's plants, its national advertising program and other basic themes to the field. The meetings ran precisely one hour, were held on Sunday and attendance was voluntary.

Two Films Were Needed for the Meetings

Actually two motion pictures were needed. The first, *Partners in Profit*, showed the company's manufacturing and quality-control operations, told how new product labels were designed and outlined the relationship of Kroger profits to employee opportunity. During its 25 minutes of screen time, company president Jacob E. Davis reported on growth in sales, profits and markets.

The second film, running only 13 minutes long, explained the Kroger Employees Profit-Sharing and Retirement Income Program under the apt title: *Profit for Partners*. It brought typical employees to the screen, working toward retirement, and showed others as they live during their retirement years.

The two-phase film program took first place

honors in the Third International Management Film Award Competition held by The Society for the Advancement of Management.

Well-Timed, Complete Program Detailed

But these weren't just "film" showings. Following a detailed "Operations Manual" developed by the Niles staff, supervisory personnel were ready with brief talks, well-arranged auditoriums, displays and the basic ingredients for what turned out to be smooth-running and often quite dramatic presentations.

Employees responded to personal invitations, addressed to them and members of their families by Kroger's president. Promotional folders were sent to supervisors, stimulating them to encourage employee attendance. And as the company's guests entered the hall, they were pinned with badges bearing the legend, "The Kroger Brand—Guaranteed fine as the best and costs you less."

A total of 55 per cent of Kroger employees turned out for these voluntary meetings, nearly 30,000 of them. Many had to drive long distances but uniformly good responses were received in all divisions.

And after the meetings, employees were handed a "take home" piece titled, "Report to Kroger Employees" which reprised highlights of the meetings and contained an inserted computer-printed "Fortune Planner." This insert enabled each employee to verify his own money position in the Profit-Sharing Program and told him how much he could look forward to upon retirement.

To paraphrase: the difficult can be done right away, the "impossible" just takes a little longer but it can be done with the right tools.

Key executives in 26 divisions conducted 55 meetings in 47 different places

57,000 Kroger employees and their spouses were invited to attend

Live action was interspersed with two Niles produced films

Hall decoration materials were shipped in compact containers like this

Decorations were designed, produced and co-ordinated by Niles display experts

Interest was intense, applause spontaneous at all meetings

More than one million pieces of literature were furnished

Operation manual contained step-by-step meeting guide

Two color motion pictures were produced by Niles organization

Kroger President Jacob E. Davis spoke on camera in one motion picture

The pure water of a mountain stream begins to move toward a river basin. Will it soon be contaminated by avoidable wastes, polluted?

As in this scene of impending desolation where a vital river is slowly strangling on polluted wastes that stagnate along its banks.

## Taking Measures to End Water Pollution

"The River Must Live" a Challenging and Pictorially Fine New Color Picture from Shell International Provides Answers to a Vital and Worldwide Problem

THE SHELL INTERNATIONAL Petroleum Company Limited and its very capable Film Unit have brought the world many notable motion pictures. But few of these will surpass the pictorial excellence and widely-useful content of a new 21-minute color film, *The River Must Live*. Made to create an awareness of the problem of water pollution, this picture also shows the nature of pollution and the measures which must be taken to end it.

Filmed in four European countries, *The River Must Live* could well have been lensed along the banks of the Hudson, the Ohio or the Mississippi. The streams affected by human and industrial wastes know no international boundaries and the problem is worldwide. The Shell Oil Company in America already has a

limited number of prints to fill expected wide demand from communities who should see and take heed of the message.

### Pollution: a By-Product of Man's "Progress"

For rivers everywhere are succumbing to the by-products of world progress: exploding populations and thriving industry whose wastes have been allowed to reach the point at which normal process of purification by bacteria no longer occurs. Shell acknowledges its responsibility but the film makes it clear that the oil industry has taken energetic and effective measures to prevent water pollution.

If, however, industrial pollution is to be kept to an acceptable minimum other industries must do the same. Non-industrial sources also contribute to the problem and there can only be

clean water if local authorities are prepared to build suitable purification plants.

### The People Must Understand Their Problem

To protect the river and keep it healthy, pollution must be prevented, not merely cured, and the way in which a river absorbs waste must be clearly understood. *The River Must Live* turns to microphotography to show in detail the organisms which preserve the balance of life in a healthy river. The natural mechanism of self-purification is slow; it needs time and space. Too much waste in too short a space overloads the river, killing the micro-organisms which keep it clean. The river then becomes permanently polluted.

This can only be prevented, the film shows, by much more widespread treatment of industrial and urban wastes. The methods are clearly

Another method of treating effluent is shown as the trickling filter separates wastes from water in this scene from Shell's useful film.

defined: physical separation, chemical and biological purification. To apply them fully, the public must understand, will be expensive but the benefits greatly outweigh the cost.

### The Film's Quality Underscores a Message

The cinematic quality of *The River Must Live* adds to the power of its important message. Director Alan Pendry used the photographic genius of Wolfgang Suschitsky (whose camera work on *The Tortoise and the Hare* was so spectacular) to fortify this film. Editing by Ralph Sheldon helps take viewers to the heart of the problem, swiftly and inexorably. Alan Fabian's microphotography, explaining the biology of river water, clarifies and lends intense interest to the subject.

Showing the results of pollution is graphic and simple enough. But this Shell International film digs deeper with visual explanations of the processes of purification, of the kinds of plants which cities must build. Flotation, flocculation and biological treatment are answers and they need to be understood. *The River Must Live* offers that understanding.

During 1966, the company also further acknowledged its own internal responsibilities with a second picture, *Clean Water*, created for refinery employees and dealing with the prevention of water pollution by oil during manufacturing processes. The films can be shown in combination to specialized audiences.

Modern sewage treatment work is pictured in "The River Must Live" as a part of the answer to the elimination of pollution.

Polluted water is being aerated to build up a rich supply of oxygen before the fluid is returned to its source again a "living" river.

# Personal Guidance for the Growing Girl

In A Bright, New Version of "It's Wonderful Being a Girl" Personal Products Uses Contemporary Approach in Film to Help Teen-Agers Understand Maturation

PERSONAL PRODUCTS COMPANY, a division of Johnson & Johnson, has released for distribution a new educational motion picture on menstrual hygiene, *It's Wonderful Being a Girl*. The 22-minute color film was produced by Audio Productions, Inc., and is available for loan, free of charge, to educators, nurses, physicians, social workers — all those concerned with helping young girls to understand the processes of maturation.

The film examines the physiological and psychological aspects of growing up through the eyes of two twelve-year-olds, Jean, already mature, is able to accept the natural biological processes of becoming a woman easily and with characteristic self-assurance. Her friend, Libby, however, is still emotionally the little girl. Shy and uncertain, she needs time to adjust to growing up. With the understanding and assistance offered by her mother, her teacher and her friend, Libby learns to understand the menstrual cycle and to apply this new knowledge to her own life.

## A New Version of Film Produced in 1959

*It's Wonderful Being a Girl* represents a complete revision of a motion picture by the same title produced for Personal Products by Audio Productions in 1959.

According to Mrs. Jane Yates, the Company's Director of Education, the decision to produce a new film was "motivated by our awareness of the need to communicate with young girls in their own language.

"We have determined on the basis of interviews with teachers, mothers and young teens themselves, that educating these girls by means of a story involving their contemporaries is an effective technique. This method, of course, requires constant attention to new fashions, styles of conversation and attitudes."

## Teen-Agers Encouraged to "Be Themselves"

To achieve authenticity in the new film, audio director Hans Mandell encouraged the girls to talk in a natural manner, often performing without benefit of a prepared script. The

film is full of action, in accordance with current interests of young teens. Various sequences, for example, are set in a swimming pool, a roller skating rink, and in a bowling alley.

A tasteful, straight-forward analysis of the menstrual cycle is presented by means of animated sequences narrated by the girls' teacher in the classroom scenes. The teacher and the girls' mothers place heavy emphasis on the importance of making good grooming, proper diet, healthful exercises and correct posture daily habits all month long.

## These Teaching Aids Supplement the Film

Also available free of charge to supplement the film are other teaching aids: a booklet for young girls, *Growing Up and Liking It*, a booklet designed especially for mothers, *How Shall I Tell My Daughter?*, and a Teachers Guide prepared for Personal Products by the McGraw-Hill Book Company.

Personal Products has made audiovisual media available to educators since 1954 when it presented its first motion picture on menstrual hygiene: *Molly Grows Up*. Over 50,000 sets of a sound slidefilm, *Confidence Because . . . You Understand Menstruation* (first made available in 1955), have been distributed. The original version of *It's Wonderful Being a Girl* has been viewed by 6,000,000 people since 1959.

Inquiries regarding purchase of the new film

may be directed to Peter J. Mooney, Audio Productions, 630 Ninth Avenue, New York 10036. The film may be booked free of charge from Mrs. Jane Yates, Director of Education, Personal Products Company, Box 6-PR, Milltown, N.J. 08850.

"It's Wonderful Being a Girl" examines both the physiological and psychological aspects of growing up through eyes of these two 12-year-olds.

The girls' teacher, Mrs. Cooper, explains the menstrual cycle and importance of good grooming and proper diet in this classroom scene.

Mrs. Cooper's explanations lead to a stimulating question-and-answer session. Jodi wants to know if she should wash hair during menstrual period.

Mrs. Jane Yates, director of education at Personal Products Company, gets demonstration of *Sum* use of new film following the premiere.

Peter Tyrell, vice-president and director of merchandising at Personal Products (at left) chats with director of the film—Audio's Hans Mandell.

Toward finale, Libby has learned to understand menstrual cycle and the new emotions involved in growing up. She contemplates a party dress.

Personal Products' premiere guests (left to right): Max Messer, chairman, health and education committee, Bronx Junior High School; Don Cameron, in charge of motion picture and tv. office of U. S. Information Agency in New York; and the producer of the film, Peter Mooney, president of Audio Productions, Inc., New York.

Training stall members at West Virginia Pulp & Paper Company's Bleached Board Division record paper machine operations on Ampex VR-7000 videotape recorder for replays which aid instructors in training operators.

## Videotapes Help Train Machine Operators

New and Rebuilt Equipment Gets Into Operation Faster as West Virginia Paper Company Records the Technique

**V**IDEOTAPE RECORDING, television's familiar "instant replay," has been adopted for a variety of uses by West Virginia Pulp and Paper Company, one of the world's largest paper and paperboard manufacturers.

The company's Bleached Board Division, headquartered in Covington, Virginia, plans to use its Ampex VR-7000 videotape recorder to train new operators, prepare experienced personnel for new or newly-converted machines, dramatize industrial safety policies, and to supplement films as media for orienting new employees.

The technique which West Vir-

ginia is pioneering in the pulp and paper industry was originally designed for use only in the television broadcast studio. A videotape recorder, used with a television camera, records images and sound on magnetic video tape for instant or delayed playback as a television picture. The tape may be replayed indefinitely, or erased and used to record new information. Most programs seen on home television are videotape recordings of earlier shows.

### Portable Recorders Broaden Field

Since the introduction of the first videotape recorder by Ampex ten years ago, however, engineering

## PRACTICAL APPLICATION OF VIDEOTAPE IN INDUSTRY

advancements have provided portable videotape recorders priced from \$1,000 to \$3,500, which are finding a wide range of applications in business, industry, recreation and education.

Videotape recording already has helped solve a major training problem, according to William A. Schoppenhorst, Division Training Director. The problem presented itself when a huge Number Eight bleached board machine at the Covington mill was scheduled to be rebuilt, at a cost of \$1.5 million, to increase its overall efficiency. The project entailed rebuilding the press section and adding to the machine's coating system.

### Problem in Re-Training Workers

The personnel who had operated the original machine would have to be retrained to operate the rebuilt version. This would take time and might prevent the "new" machine's swinging into full operation immediately after the conversion.

To meet the problem, Schoppenhorst turned to videotape recording. Shortly before the rebuilding began, he and his group took the Ampex machine and a television camera to the company's Luke, Maryland, mill. Here was located a machine with components identical to those the rebuilt Covington machine would have. In two days the men recorded on video tape all phases of the machine's operation necessary for training purposes.

### Extra Dividends During Recording

"We not only recorded the normal operation of the machine," Schoppenhorst said, "but also witnessed a couple of paper breaks, and taped the methods which the operators used to get the machine rethreaded. It was a complete visualization of the procedures needed in forthcoming classroom-type instruction. And it was permanently recorded on video tape, ready to be played back anytime."

Soon afterward, the big Covington machine was deactivated, as the two-week rebuild project began. During those two weeks, the idled operators were on a "TV break" — being indoctrinated in the operation of the "new" machine by watching video tapes of the Luke machine.

### Personnel Ready With the Machine

At the end of two weeks, when the Covington machine's conversion was completed, a well-trained team of operators was ready for it. "Although the operators were handling the rebuilt equipment for the first time, men and machine al-

ready were familiar partners due to a great extent to videotape recording," Schoppenhorst said. "The result was an unusually successful start-up."

The division's four-year apprentice programs also will benefit from use of videotape recording. Tape sequences showing detailed operation of some of the machines and equipment in the large Covington plant will be viewed and studied by apprentice classes on various levels.

### Record Visiting Speakers' Talks

Visiting lecturers, from such cities as New York and Philadelphia, have customarily formed a part of the apprentice curriculum. But hereafter, each visitor's presentation may be recorded on video tape, to be shown in lieu of future visits, thus saving West Virginia the repeated traveling expenses and possible lecturers' fees.

Such applications tie in with the division's stated policy regarding use of the Ampex VR-7000. "In any situation where there is greater convenience or effectiveness to be gained, and money or time to be saved," Schoppenhorst said, "we will try to put videotape recording to work."

### Other Uses for This Technique

Based on this guideline, at least two further uses of the technique are being considered: safety training and new-employee orientation. Simulated industrial accidents, in factory and office environments, will be recorded on video tape. The tape then will be shown, with a safety talk, to all employees, to emphasize the importance of safety consciousness.

Newly-hired employees in all departments soon may be getting acquainted with their company via an orientation video tape, instead of viewing the conventional "orientation films" familiar to most firms. "From the video tape showings we already have held, we've found that employee retention is greater when receiving the information from a television set than when viewing it on a motion picture screen with the lights out," Schoppenhorst pointed out. "Perhaps it's a commentary on our modern TV-oriented society, but it's a fact." \*

**EDITOR'S NOTE:** Other videotape reports await publication. They cover training at J. F. Jelenko & Co.; a program in the Pitman-Moore Division, Dow Chemical Company; and a round-up of varied applications of this useful audio-visual training tool.

Videotape recording of a key machine's operation is played back on VR-7000 recorder to help training of apprentice operators in Covington, Virginia plant.

**LEADER PORTRAIT**

**A Biography-in-Brief About  
Financial V. P. Ralph Hall**

**N**O MAN FOR SPOTLIGHTS is Ralph Hall, our recently-elected Financial Vice-President. This father of six is a very modest man, indeed. And one who believes in brevity of words, too.

But we were able to put together some of the important highlights in the career of this independent film maker. Including the fact that he displayed his interest in his present career at the early age of 13, when he made his first film with a borrowed camera and a budget of \$7.00.

And we do know that he served as a combat cameraman in the U. S. Army. After his discharge, he began a new professional career as a cameraman/editor in the vast North American Aviation complex. Later, he became head of the Motion Picture Department

Financial v.p. Ralph Hall

of the General Dynamics/Convair plant in San Diego. It was here that Ralph's reputation for fine workmanship and ability as a leader began to spread through the Southern California area.

When the great cut-back hit Convair and the San Diego area, Ralph Hall returned to Los Angeles to become manager and executive producer for Lytle Productions. Subsequently joining the Film Designers Division of EMC Corporation as executive producer, he later became production manager for Graphic Films' Corporation in Hollywood.

Then that siren call of independent production was heard — and heeded. Currently, Ralph is the head of his own company: Ralph Hall Productions, Hollywood. The company is active in business, educational and government film work. And Ralph is al-

so associated with baseball manager Bobby Bragin in the production of some outstanding sports training films.

As for his personal life: his avocation is travel and camping trips with Mrs. Hall and their family of six active youngsters. He

also has an intense interest in experimenting with new forms of audiovisual communication.

Meanwhile, keeping track of IFPA finances does help to take care of those few idle moments in the schedule of a busy producer and a very active member. •

**Panelists Discuss Film Business Methods**

**P**ANEL DISCUSSIONS of business development on behalf of industry film producers continued as the principal subject for the October meeting of IFPA's Los Angeles Chapter. Principal panelists, whose comments were heard were John Russo, speaking for the Los Angeles Chamber of Commerce; Jud White, of the Small Business Administration; Jack Rokohr, U. S. Department of Commerce; and Jack Pearce, Western Manager, Sales Meetings.

This session brought out a number of the association's sustaining members, adding their support for

IFPA's study of improved methods for business growth among producers. Credit for the two first meetings on this subject is shared by program co-chairmen Vern Vihlene and Ed Rinker and the Chapter's new chairman, William Morrison, of F-M Productions.

**Robertson Heads Membership**

Scott Robertson, of Eastman Kodak, is now heading IFPA's national membership committee. He was asked to serve in this important post by special request of the National Board and with the special consent of the Los Angeles Chapter has turned over his chapter chairmanship to Bill Morrison.

**It Was "Festival Month" in San Francisco**

All October activities of IFPA's Northern California Chapter were devoted to final arrangements for the recent San Francisco International Film Festival. And the October meeting of the chapter brought showings of Festival "finalists" and winners of the "Film as Communications" category at that event. The session was held at the Clift Hotel.

Again playing key roles in Festival arrangements, IFPA members took part in nine pre-screening juries which reviewed the "Communications" entries and spent more than 200 hours on the 211 films submitted for this category. Ray Jaeger, past Western Executive Vice-President and former Chapter Chairman Vin Agar have both served on the Festival's board of directors for several years. •

Elaine Dolniek, our Recording Secretary, for the past several years. The new telephone number and address of the National Headquarters' office will be announced in your next JOURNAL.

**Good News at Dyrenforths**

There's good news from the Harold Dyrenforth residence! Mrs. Dyrenforth has recovered completely from her recent operation.

"Golden Gate" award winners were (l to r): James Tartan, director; Don Hoster, producer, and Robert Hecker, writer of "Homeless Child."

**Board Announces Resignation of  
Recording Secty. Elaine Dolniek**

The National Board has announced the resignation of Mrs.

 Our recent past-president also reports purchase of a new home in the Laguna Nigel community along the southern beach area. When's the house-warming, Mr. Past-President? •

Help! Help! Gene Huggens, IFPA President, is fast becoming buried under a landslide of paper at his General Dynamics, Pomona office since his very efficient secretary, Lucy, has taken time off to welcome a new heir (or heir-ess!). Congratulations, Lucy! •

Jack M. Goetz, director of public relations at CFI (left) congratulates Donald L. Plath, of Boeing Company, on completing the seminar.

## CFI Seminar on Advanced Film Techniques

Participants from all over the U. S. and from abroad attended another three-day "Advanced Film Techniques Seminar" hosted by Consolidated Film Industries in Hollywood on September 28-30. Film makers and users represented Federal and state agencies, scientific and educational institutions, the military services and factual film producers were welcomed by CFI president Sidney P. Solow.

CFI president Sidney P. Solow explains mathematical theory behind sensitometry to Seminar audience.

The seminar program began at Ryder Sound Services, with instruction on sound equipment provided by Ronald R. Cogswell and was highlighted by a discussion of color vision and a demonstration on the subjective nature of color perception by Edward P. Ancona, Jr., of NBC-TV, color coordinator of that network's top-rated series, *Bonanza*. The first day's program concluded with instruction on film editing by Fred W. Berger, ACE, supervising film editor of Madison Productions; he was followed by Dr. C. Loren Graham, Eastman Kodak Company, who discussed the "Design of a Complete Photographic System." The concluding first day presentation was given by Laurence I. Mascott who spoke on film writing. Mascott's documentary, *The Brave Rifles*, is widely-acclaimed.

Dale Tate, manager of CFI's Title and Optical Division, followed with pointers on "Titling and Optical Effects."

**Discusses Photographic Theory**  
 A popular 1965 Seminar session scored again as Sid Solow conducted a session on "Some Useful Theory." A professor of adjunct rank at the University of Southern California where he has instructed continuously since the fall of 1947, Solow gave a brief but thorough discussion of the evolution of photographic theory with special emphasis on the nature of "gamma" as a photographic concept. He also reviewed the use of reversal films v.s. negative-positive.

Ted Fogelman, CFI lab superintendent, continued the post-luncheon program with his talk on "Working With the Film Laboratory" and guided a two-hour tour of the company's facilities.

**On Lighting and Cinematography**  
 The final day's program was headed by John L. Murray at ColorTran Industries. Working with Charles Clarke, ASC, Murray conducted discussions of lighting and the role of the director of photography. Demonstrations using ColorTran equipment featured proper and improper lighting for normal and effect camera work. A session on film handling equipment was hosted on the final

Lou Livingston, head of CFI's Filmstrip Department, opened the second day's seminar with a graphic demonstration of production methods involved in filmstrips.

Lou Livingston, in charge of Filmstrip Dept. at CFI, discussed that medium at Film Techniques Seminar.

afternoon by Harry Teitelbaum, vice-president of Hollywood Film Company. The seminar concluded with a lengthy "question and answer" period with all "instructors" participating to clear up any questions that might have developed during the three-day sessions. •

### Betty Jane Williams is Honored for "Outstanding Achievements"

Betty Jane Williams, immediate past-president of Los Angeles Advertising Women and a pioneer member of the Industry Film Producers Association, has been honored for "outstanding achievement in business and professions." At ceremonies held in Newport Beach, Calif. recently, Miss Williams' award culminated National Business Women's Week and was presented by Sarah Jane Cunning-

ham, president of the National Federation of Business and Professional Women's Clubs.

One of six women to receive national recognition, she shared that honor with aviatrix Jacqueline Cochran. By coincidence, Miss Williams served under Miss Cochran's command during World War II in the WASP's. She still holds the rank of Major, USAF Reserves.

Her career in the Air Force led to her recent career in writing,

Betty Jane Williams: honored

direction and production of aviation and missile/space motion pictures for industry and the military. Betty Jane Williams' films have received two "Cindy's" at Industry Film Producers' awards programs and three "Lulu's" from Los Angeles Advertising Women for the "best business films in 13 Western states." •

## The 1967 Guide to Producer Services

**I**N THE TRADITION of accuracy and completeness which is the hallmark of these special BUSINESS SCREEN annual buyer's guide issues, the Editors again bring our subscriber family in the U. S. and abroad some 35 pages of detailed listing data on production service organizations, ranging from the national and international film distributor listings (see page 31) to the many facts-in-depth about film laboratories and other service organizations and individuals which begin on the facing page.

The figures show how complete this survey effort was: 83 labs in the U.S. are listed; England and the European continent are covered by data beginning on page 108; there are 21 specialists in film art and animation; 12 film editing services; 14 effects and optical houses; 12 film music libraries and music specialists; 28 motion picture and slidefilm sound recording companies, title specialists, film translators; cinematographers and other service groups. Over 50 specializing film writers are again at your service.

Following our semi-annual listing of film manufacturers' representatives (page 96), other pages provide sources of manufacturers and key distributors of specialized film production equipment and related accessories. Look to them for service. You'll find this issue useful throughout 1967. •

## Now, show slides 8, 17, 43, 80, 22 as smoothly as 1, 2, 3, 4, 5

### New Kodak random-access projector . . .

With the new KODAK CAROUSEL RA-950 Slide Projector your slides are always in perfect sequence no matter where they are in the tray.

You can put any slide in the 80-slide tray on the screen in 3½ seconds or less. Just dial the slide's number, press a button, see your slide on the screen. Refer back to any slide or jump ahead as smoothly as though slides were in perfect order.

If you teach, or make speeches, train people, sell, or have to retrieve pictorial information for any reason, this new projector will give you a new flexibility and smoothness for answering questions, for relating words to pictures, for showing whatever you want to display. And it does it fast.

Remote control, of course. One simple control panel lets the presenter run the show even in large auditoriums. He never has to worry about slide

jamming. Its dependable gravity feed makes this KODAK CAROUSEL RA-950 Projector jamproof.

It's so dependable it can be plugged into computers in training and referencing systems. It can be used for screen, console, overlay, and video-information display systems.

For a demonstration, call the Kodak educational markets dealer nearest you.

**Services:** suppliers and trainers of theatrical livestock. Animal drawn vehicles. Livestock vans; low bed trailers for hauling wheeled stock. Operate farm and warehouse.

**Change films in 2 seconds flat!**

**Read how Fairchild's amazing new MoviePak cartridge multiplies the value of your entire sound film program**

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play. In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training classes. In the boardroom. To switch instantly to another film, just snap out one cartridge, snap in another.

Every film you have can be easily converted to 8mm and threaded into the MoviePak cartridge. Duplicate prints are less expensive than 16mm, too. Now you can unleash the full power of your entire sound film program.

The Fairchild Mark IV projector is portable, weighs only 20 pounds and is always ready for action. No warm-up time required.

For display use, it will run without supervision, repeating automatically. It takes up to 22 minutes of film with a single MoviePak.

To see for yourself, just send in the coupon.

Gentlemen: Please show me.

Services: Distributors of film materials for the motion picture and television industries.

New Mid-Manhattan Quarters for American Film Productions  
American Film Productions, Inc. and its companion firm, AFP Distributors, have moved to new offices at 1540 Broadway in New York City. The two "AFP" companies were previously located at 500 Broadway.  
American Film Productions will enlarge its present editorial facilities, add an insert stage, animation and art facilities, conference and screening room.

AFP Distributors will amplify its present facilities for film handling and inspection, as well as for shipping and general film servicing. AFP's present computerized distribution system, using IBM equipment, will be expanded in the new installation. Space has also been provided for additional administrative and clerical staff.

AFP's operations at Ft. Lee, N.J. and in Hollywood will be linked with the headquarters installation by Teletype.

SERVING FILM PRODUCERS SINCE 1907—THE LABORATORY THAT'S OLDEST IN EXPERIENCE AND NEWEST IN EQUIPMENT

**T**HE FACT THAT mechanically-unsafe motor vehicles are an important cause of automobile accidents has been proven. The cause of an unsafe motor vehicle is also well known — lack of continuous preventive maintenance. The cure is equally well known — drivers need only to take advantage of the facilities available at thousands of service stations and repair shops to make certain that their car is always in a safe operating condition.

The problem that remains, therefore, is to teach the individual driver the basic elements of automobile maintenance. Only by educating the driver to the need for continuous preventive maintenance can we expect him to assume the responsibility for proper car care which is his and his alone.

The Safe Car Educational Institute, a non-profit, non-commercial organization, founded by a group of independent automotive industry executives, has created a comprehensive plan to help solve these problems by teaching preventive maintenance to drivers in the nation's high schools.

The SCEI has sponsored a series of seven color sound filmstrips, produced by Training Films, Inc., of New York, aimed at, and designed for the two million high school students currently taking driver education courses in 17,227 public schools. They have been created specifically to enhance the present 30 hours of classroom driver instruction recommended by the National Education Association and are not intended to replace or supplant any existing car care program.

Written by professional experts, under the guidance of leading educational advisers, each of the filmstrips is directed toward increasing interest and understanding of safe car operation.

The filmstrips cover the following subjects: *Seeing for Safety*, *Tire Care for Safety*, *Good Brakes for Safety*, *Filtration for Safety*, *Performance for Safety*, *Electric Power for Safety*, and *Cooling for Safety*. They are now being offered to all schools having driver education courses. Through the support of SCEI members, the Institute is able to make the series available to schools for \$50 per complete set. This includes seven kits, each with color filmstrips, a narration on tape, and a printed teachers' guide.

For further information, write Safe Car Educational Institute, P.O. Box 157, Butler, N.J.

## Films Serve Vital Field of Traffic Safety

Liberty Mutual Film "Six Deadly Skids" Gives a Dramatic Demonstration on How to Handle Car in These Emergencies

**S**HARP FOCUS on one important phase of an insurance company's efforts to increase awareness of highway safety factors is provided in *Six Deadly Skids*, a new 16mm sound film. The picture, featuring internationally-known racing car driver Denise McCluggage, takes viewers to the Skid Control School set up by the Liberty Mutual Insurance Companies at Hopkinton, Mass.

The school, the only one of its kind in the country, ties in with Liberty Mutual's concept of "Decision Driving" — automatic, trained reflexes in emergency situations.

The Boston-based insurance firm says it hopes the skid school concept will one day be part of

driver-training programs throughout the country. Purpose of the school is to demonstrate the six kinds of skids and let drivers experience the skids and then show them how these skids can be controlled.

The six skids, according to Liberty Mutual engineers, are:

1. Front-wheel lock, when the car's front tires slip on ice or oil slick, causing the driver to lose steering control.

2. Rear-wheel lock, when the driver slams on the brakes on slippery pavement, causing the car to make a 180-degree turn with the rear end of the car whipping around to the "front."

3. All-wheel lock, when brakes are jammed too hard, causing all

High-speed skid that could result in fatal accident on open highway is demonstrated at Liberty Mutual "skid school" in Massachusetts town.

four wheels to lose traction with the road. The car can slide unpredictably in any direction.

4. Power skid, when the car is accelerated too fast for road conditions, causing the rear wheels to spin quickly while the car "fish-tails" back and forth.

5. Spinout, caused by entering a turn too fast and the rear end of the car breaks loose and whips the car off the road.

6. Hydroplaning, the front tires literally riding at high speed atop a thin film of water, with no tire contact with the road. Sudden wind gust caused by a passing vehicle could push the car right off the road.

Liberty Mutual engineers say there are four basic steps to take when a car skids: de-clutch, counter-steer, take foot off the brakes and take foot off the gas pedal.

When all four wheels are locked, the film demonstrates, the car can be slowed down by "stabbing" the brakes, repeatedly hitting them quickly until the front end of the car goes down and releasing the brakes until the hood rises.

Produced by Dynamic Films, Inc., of New York, the 29-minute color film is being distributed to the television stations by Modern Talking Picture Service. School and club bookings may be made directly with Liberty Mutual at 175 Berkeley St., Boston 02117 •

Manufacturers of F & B Ceco professional viewers, editing tables, film barrels, guillotine splicers, splicing blocks and magic mylar splicing tape.

### Moviola Manufacturing Company

5539 Riverton Ave., North Hollywood, California 91601. Phone: (213) TR 7-2173.

Manufacturer of Moviola editing equipment and all related editing accessories.

### Neumade Products Corporation

250 W. 57th St., New York, N. Y. 10019  
Phone: (212) JU 6-5810.

Manufacturer of Neumade editing equipment.

## Film Splicing Equipment

### Maier-Hancock Sales Co.

14106 Ventura Blvd., Sherman Oaks, California.

Distributor of film splicing equipment and accessories for 35/16/8mm films.

### Permacel

U.S. Highway No. 1, New Brunswick, New Jersey.

Manufacturer of splicing equipment and Permacel film splicing tape.

### Prestoseal Manufacturing Corporation

37-12 108th St., Corona, N. Y. 11368  
Phone: IL 7-5566

Manufacturer of film splicing equipment.

### Charles Ross, Incorporated

333 West 52nd Street, New York, N. Y. 10019. Phone: (212) CI 6-5470.

Rental, sales and service of specialized lighting equipment including generator trucks & trailers, grip equipment and props.

### Studio Lighting Company

2212 North Halsted Street, Chicago, Ill. 60614. Phone: (312) EA 7-2800.

Rental, sales and service of lighting equipment including lights, cable boxes, and grip equipment.

## Rental, Sales, Service of Professional Cine Equipment

### ABC Camera Corporation

52 W. 44th St., New York, N. Y. 10036  
Phone: (212) JU 2-1441.

Rental, sales and service of cine equipment and related accessories.

### Behrend Cine Corporation

51 E. Grand Ave., Chicago, Ill. 60611,  
Phone: (312) 527-3060

Rental, sales and service of cine equipment lighting, editing and sound equipment.

### Birns & Sawyer Cine Equipment

424 Santa Monica Blvd., Hollywood Calif. 90038. Phone: (213) HO 4-5166.  
Cable: Birnsaw.

Rentals, sales and service of cine equipment and all related accessories. Specializes in Arri equipment.

### Burke & James, Inc.

33 W. Lake St., Chicago, Illinois. 60606. Phone: (312) 372-5422.

Rentals and service of photographic and cine equipment and all related accessories.

### The Camera Mart, Inc.

845 Broadway (at 60th St.), New York N. Y. 10023. Phone: (212) PL 7-6977.  
Cable: Cameramart.

National rental, sales and service of professional cine equipment and accessories.

### Camera Service Center

33 West 52nd St., New York, N. Y. 10019. Phone: (212) PL 7-0906.

Rental, sales and service of cine equipment and accessories.

### Cine 60

30 9th Ave., New York, N. Y. 10036.  
Phone: (212) JU 6-8782

Rental, sales and service of cine equipment. Specialize in Arri attachments.

### Victor Duncan Motion Picture Cameras & Equipment

50 Piquette Ave., Detroit, Michigan 48202. Phone: (313) TR 4-2334.

Rental, sales and service of cine equipment and related accessories.

### J. P. Filbert Co., Inc.

2007 S. Vermont, Los Angeles, Calif. Phone: (213) 734-1196

Equipment rental, sales and service, audio and video; specialize in Xenon light projection. Creative consultants.

### F&B/Ceco, Inc.

315 W. 43rd St., New York, N. Y. 10036

## Manufacturers of Laboratory & Printing Equipment

### Bell & Howell Company

Professional Equipment Division

7100 McCormick Road, Chicago, Ill. 60645. Phone: (312) 262-1600.

Manufacturer of film printing equipment for motion picture laboratories, including 16mm, 35mm, 35 32mm, 65 70mm, and 70mm sizes.

### Calumet Manufacturing Company

6550 N. Clark Street, Chicago, Ill. 60626. Phone: (312) SH 3-2442.

Manufacturer of print processors, mixing and storage tanks, washers, sinks, and other laboratory accessories.

### Oscar F. Carlson Company

2600 Irving Park Road, Chicago, Illinois. 69618. Phone: (312) JU 8-6720

Manufacturer of Depue motion picture film printers, automatic light control boards and microfilm printers.

### Computer Measurements Company

Division of Pacific Industries

12970 Bradley Avenue, San Fernando, California. Phone: EM 7-2161.

Manufacturer of Unicorn products, including the Unicorn solvent film cleaner, and the Unicorn automatic film splicer.

### Andre Debrie of New York

432 West 45th St., New York, N. Y. 10036.

U.S. distributors of Andre Debrie film processors; lab equipment.

### Eastman Kodak Company

Motion Picture and Education Markets Division

343 State, Rochester, New York 14650  
Phone: (716) 325-2000.

High-speed film processing equipment.

### Filmline Corporation

43 Erna Street, Milford, Connecticut.

Manufacturer of black & white and color motion picture film processing equipment for 16mm, 35mm, and 70mm film.

### Oscar Fisher Company, Inc.

P.O. Box 2306, Newburgh, N.Y. 12550

Manufacturer of processal "dry" spray immersion film processor; Mark film processors; other processing equipment.

### Frank Herrfeld Engr. Corp.

5716 Camille Ave., Culver City, Calif.

Manufacturer of continuous and step motion picture printing equipment.

### Hi-Speed Equipment, Inc.

73 Pond St., Waltham, Mass. 02154

Manufacturer of full line of Hi-Speed products for the laboratory including processing machines and related systems.

### Houston Fearless Corporation

Westwood Division

11801 West Olympic Blvd., Los Angeles, Calif. 90064. Phone: (213) BR 2-4331.

Manufacturer of Houston Fearless motion picture film processing machines and related equipment.

### Lipsner-Smith Corporation

7334 N. Clark St., Chicago, Ill. 60626.  
Phone: (312) 673-4030.

Manufacturer of the CF-2 Ultrasonic Film Cleaner.

### Macbeth Instrument Corporation

P.O. Box 950, Newburgh, N.Y. 12553  
Phone: JO 1-7300. Cable: ARTDAY.

Manufacturer of motion picture laboratory equipment.

### J. A. Maurer, Inc.

37-01 31st Street, Long Island City, New York. 11101.

Manufacturer of Maurer-Matic film processor, 16 35mm model and 70mm model, and other laboratory equipment.

### Motion Picture Printing Equipment Co.

8107 N. Ridgeway Ave., Skokie, Ill.  
Phone: (312) OR 5-8220

Manufacturer of Peterson contact printer and related accessories.

### Producers Service Company

1145 N. McCadden Pl., Hollywood, Calif. 90038.

Manufacturer of Acme optical printer for special-effects motion picture printing.

### Research Products, Inc.

716 N. LaBrea Ave., Hollywood, Calif. 90038. Phone: (213) WE 3-9301.

Manufacturer of Research Products Optical Printers in 70mm, 35mm, 16mm, 8mm. Agents for sale of Acme cameras, projectors, registration contact printers, animation equipment. Custom-built special effects equipment to order.

### Sickles Sales and Service Company

Route 1, Box 726, Scottsdale, Arizona. 85257. Phone: WH 6-4323.

Manufacturer of slide duplicators, optical printer, color printers, film strip printer.

## Specializing Laboratory Equipment Manufacturers

### Treise Engineering, Inc.

1949 1st St., San Fernando, Calif.  
Phone: (213) EM 5-3124.

Manufacturer of continuous film processing equipment and accessories, sound track applicators, precision film sprockets and rollers, etc.

### Uhler Cine Machine Company

15762 Wyoming Avenue, Detroit, Michigan 48238. Phone: UN 1-4665.  
Cable: UHLICIMA.

Manufacturer of motion picture laboratory equipment.

## Manufacturers & Distributors of Reels & Containers

### Filmstrip Containers

#### Buckeye Stamping Company

555 Marion Road, Columbus, Ohio. 43207 Phone: (614) 443-9458

Manufacturer of filmstrip cans, etc.

#### Plastican Corporation

Box 157, Butler, New Jersey

Full line of plastic containers.

#### Richard Manufacturing Co.

5914 N. Noble Ave., Van Nuys, Calif.

Full line of plastic containers.

### Film Shipping Cases

#### Fiberbilt Sample Case Co.

601 W. 26th St., New York, N.Y. 10001.  
Phone: (212) WA 9-7772.

Manufacturer of Fiberbilt shipping cases for film requirements.

#### William Schuessler

361 W. Superior St., Chicago, Ill. 60610  
Phone: (312) SUPERIOR 7-6869.

Manufacturer of complete line of film shipping cases for motion picture and sound slidefilm requirements; etc.

#### Compco Corporation

1800 N. Spaulding, Chicago, Ill. 60647  
Phone: (312) EV 4-1000.

Manufacturer of Compco line of film cans and reels for all sizes.

This listing is selective, including only those principal sources of products and services used in the field.

## Camera Tripods and Camera Pan Heads

### Quick-Set, Inc.

8121 North Central Park Avenue, Skokie, Illinois. Phone: (312) OR 3-1200.  
Manufacturer of full line of tripods, pan heads, stands, dollies, and mobile instrument positioning equipment.

### F & B/Ceco, Inc.

315 West 43rd St., New York, N.Y. 10036 Phone: (212) JU 6-1420  
Manufacturer of "PRO JR" line of tripods, dollies, triangles and accessories.

### TA Manufacturing Corporation Cinema Products Division

4607 Alger Street, Los Angeles, Calif. 90039. Phone: (213) CH 5-3748.  
Manufacturer of Thomas fluid pan heads.

### Comprehensive Service Corp.

250 W. 64th St., New York, N. Y. 10023  
Phone: (212) 799-2500.

Branch: 829 N. Highland Ave., Los Angeles, Cal. Phone (213) HO 2-0969.

Motion picture reels, cans, equipment

### Goldberg Bros.

3535 Larimer, Denver, Colo. 80217.

Manufacturer of film reels and cans.

### Mastereel Industries, Inc.

25 Home St., White Plains, N. Y. 10606.  
Phone: (914) 946-4884; in New York: (212) 933-1488

Specialized film handling equipment; interchangeable split reels.

### Plastic Reel Corp. of America

612 Boulevard East, Weehawken, N. J.

Manufacturer of Plio-Magic plastic film shipping cases, reels and accessories.

### Probe & Develop, Inc.

The Whitcomb (Penthouse) 1231 Market St., San Francisco, Cal. 94103.  
Phone: (415) 626-1919

Manufacturer of P-D Filmpack, plastic film shipping containers.

### Taylorreel Corporation

185 Murray St., Rochester, N. Y. 14606

Manufacturer of Taylorreel line of film cans and reels for all sizes.

## Film Editing & Inspection Equipment

### The Harwald Company

245 Chicago Avenue, Evanston, Ill.  
60202 Phone: (312) DA 8-7070.

Manufacturer of Inspect-O-Film line of professional film inspection equipment, with all related accessories and modifications. Also professional splicing equipment, film storage equipment, etc.

### Kidde Machine Corporation

35 Farrand St., Bloomfield, N.J.

Manufacturer of Kidde inspection equipment and related film editing accessories.

### Paulmar, Incorporated

464 Central, Northfield, Ill. 60093

Manufacturer of Paulmar line of film inspection equipment and related accessories.

## Other Specialized Sources

### Hurletron Incorporated

Electric Eye Equipment Division

1938 East Fairchild St., Danville, Ill.

Manufacturer of automatic shutter control systems for high-speed motion picture printers; other lab accessories.

### Midwest Visual Equipment Co.

3518 W. Devon Ave., Lincolnwood, Ill.  
Phone: (312) IR 8-9820 and 571 W.  
Randolph St., Chicago, Ill. 60606.

Rental, sales and service of cine equipment and related accessories.

### Photomechanisms, Inc.

15 Stepar Place, Huntington Station,  
New York.

Manufacturer of Rapidata Processing equipment (negative & positive).

### Rank Precision Industries, Ltd.

Woodger Road, Shepherds Bush,  
London W. 12, England.

Manufacturer and distributor of professional motion picture and television camera equipment and related accessories.

### Ryder Sound Services, Inc.

1161 North Vine Street, Hollywood,  
Calif. 90038 Phone: (213) HO 9-3511

Rental of magnetic sound recording equipment for production.

## Photographic Chemicals

### Philip A. Hunt Chemical Co.

Roosevelt Place, Palisades Park, N.J.

Manufacturer of photographic, graphic arts and x-ray chemicals.

## Cinematographers Find That Color Adds Interest in Social Service Spots

☆ With color now reaching beyond network shows and into local tv programming, the question of b/w or color for public service television spots is of increasing importance.

Economy is one good and practical reason for producing film spots in 16mm b/w for non-profit agencies. Some producers feel also that the stark quality of b/w adds to the drama of the harsher realities of life often depicted in these spots.

But it can work the other way, as well. Community Service Society, a New York City social service agency, recently commissioned Cinematographers, Inc., a New York industrial film and TV commercial producer, to create and produce for them a one-minute public service television spot.

Cinematographers Ed Schultz and Bill Doherty felt that a departure from the gloomy nature of many public service films was called for. They recommended visualizing the positive side of CSS' work with people. They also urged the use of color to add impact to the feeling of hopefulness in their concept.

The up-beat spot, consisting of seven exterior scenes, was shot on 16mm Commercial Ektachrome and is now attracting favorable attention on all New York City television stations.

**THE INDUSTRIAL FILM AT VENICE:**

(CONTINUED FROM THE PRECEDING PAGE 52)  
roads, bridges, extension of navigation facilities, cable-laying and industrialised building in Italy itself.

Each of these was a major international industrial film and all offered interesting comparisons. *In Your Life* sponsored by Italsider, the Iron and Steel combine, has the same purpose as the US *Steel & America* — directed at the Italian public. *Chilometri 1696* deals with a gas pipeline — so does *Gaz du Nord*, a Dutch film. *La Diga di Kainji* shows the construction of a hydroelectric scheme, which will transform the economy of northern Nigeria — and the Portuguese film *Alto Robago* describes a similar installation which will have a similar effect in northern Portugal.

In all there were over 20 films on major construction projects throughout the world. Not only are these films used give inspiration to the developing countries, but they have the hard commercial value of promoting further business for the contractors, the steelmakers and the engineers responsible for them.

Other films which come to mind were about roads — Italy's *Una Strada d'Acciaio* and France's *Route des Vacances*, underlining Europe's need for better communications.

In the building industry group the Swedes and Italians dominated with systems-building techniques and the Germans, Austrians and Spanish had films about lightweight concrete, glass and ceramics. Italy and Finland had films about textiles.

Motor manufacturers films covered research, design and sales — offered by Holland, Sweden, Italy, USA and Britain.

The Germans dominated the chemical and atomic energy field — there were 12 iron and steel films from a number of countries.

Along with all these films about projects and machinery, there were some *very human* subjects — *Like Rings on Water* from Sweden. This fine black & white film makes us ask, as it intends us to do, what is to be the end of this constant move from the country to build bigger and bigger urban complexes? We can relax with *Philips Cavalcade — 75 Years of Music* from Holland, or Britain's *The Tortoise and the Hare* sponsored by Pirelli's UK subsidiary.

In the training field *Visual Aids* offered by the British Navy and *Les Clients Sont ce qu'ils Sont* from France reveals the power of film as an instructional medium. *Sunrise at Eastern* sponsored by Eastern Airlines at first shocked European for its frankness in revealing the methods employed by a company in bad shape to recover its corporate dignity and profitability.

As one speaker said at the Festival — "through the Festivals, sponsors and producers have been encouraged to improve their production techniques to make films which really play their part in industrial communications." But he also claimed that industry in Europe does not really understand what it can do with its films — it has not been encouraged to explore and exploit the avenues of distribution. This perhaps is the lesson we should learn from the 7th Industrial Film Festival.

**THE EDITORIAL VIEWPOINT:**

CONTINUED FROM THE PRECEDING PAGE 18)  
Australia, Finland, Greece, Japan, Mexico, Hawaii, Norway, South Africa, Denmark, England, Switzerland, Germany, Belgium, and Turkey. U. S. member companies are represented in 30 states.

The network aim is to broaden the scope and raise the standards of non-theatrical film making around the world. Members will work together by helping each other with location assignment of photography and recording in their areas. They will exchange information on available personnel and equipment and share their experiences with new equipment and materials.

Vice-president of IQ is Matt Farrell, president of Matt Farrell Productions, New York. Secretary-treasurer is Jack R. Rabius, president of K & S Films, Inc., Cincinnati, Ohio. Three board members complete the officer structure. They are Knut-Jorgen Erichsen, managing director of Centralfilm A/S in Oslo, Norway; D. M. Sapra, chairman of Asia Telefilms, Hyderabad, India; and Howard J. Silbar, managing director of Time-Life Productions, Grand Rapids, Michigan.

Founder of the organization was Walter J. Klein, president of Walter J. Klein Company in North Carolina. All business for the network will be conducted from the offices of Crawley Films in Ottawa. The organization is not actively soliciting additional memberships but will periodically review applications from film companies in other areas of the world. Prospective members are required to submit financial statements, extensive references, films and production lists.

**Influential Negro Audiences Offer Good Potential for Useful Sponsored Pictures**

Don't overlook the influential Negro audience for sponsored films which truly serve the interests of this very large segment of the total American community. Strong devotees of both television and the theaters, Negro viewers can also be reached by direct distribution of product and service films through their well-attended lodge, club and community organizations via 16mm prints, 8mm rear-screen sound projectors, set up in stores and at other sites. They will also attract good viewing audiences.

Home care and remodeling ideas, personal products, driver-training skills and a wide range of other subjects have indicated wide appeal among Negro viewers.

**Documentary Films Which Portray West Invited to Compete for "Wrangler" Award**

The Western Heritage Awards, sponsored by the National Cowboy Hall of Fame and Western Heritage Center in Oklahoma City, has again extended an open invitation to producers and sponsors of films which provide an accurate portrayal of the West to compete for one of their Wrangler Awards.

The 1965 winner of this trophy for outstanding Western documentary films was *The Beautiful Tree, Chiskale*, produced by the University of California's Extension Media Center. In 1964, the National Film Board of

Canada received this award for *Age of the Buffalo*.

Entry deadline for 1966 films of this type close: January 6, 1967. Although 35mm prints are accepted, preference is expressed for 16mm. Write or wire the Public Relations Department, National Cowboy Hall of Fame, 1700 Northeast 63rd Street, Oklahoma City, Okla. 73111. Or phone them at Greenfield 8-1811, area code 405, if you have a title that's suitable for this award.

The General Electric "Mare 300" lamp enables class to view bright image in outdoor setting.

**Brilliant Images for 16mm Color Films Made Possible by General Electric Lamp**

The American premiere of *City in the Kingdom*, held last month in the large Community House of Christ Church in Winnetka, Illinois, was a memorable experience in modern projection techniques as well as affording the privilege of sharing this challenging Coventry Cathedral film with the more than 400 suburban Chicagoans who attended.

The Editor of BUSINESS SCREEN arranged with Midwest Audio-Visual Equipment Company, representatives of Bell & Howell, to demonstrate the latest in Bell & Howell 16mm projection. The showing was brilliant and the image on the screen in the sizeable auditorium was bright and sharp. Give full credit not only to a superb new projector but also to the new General Electric "Mare 300" lamp. In the picture on this page, the lamp is shown as capable of beating outdoor light but you'll seldom encounter that problem.

But what users of factual films can count on is that Bell & Howell, Graflex and other 16mm projectors equipped with this new lamp will reproduce today's fine color processes, bringing out the best in beautiful pictures.

**ANA Issues Useful New Booklet on Basic Requirements for Meeting Room Facilities**

A 20-page booklet describing the factors which should be considered in designing meeting rooms and selecting conference sites has been published by the Association of National Advertisers Audio-Visual Committee. It's title: "Basic Requirements of Meeting Room Facilities for Effective Audio-Visual Communications."

The booklet was prepared by O. H. Peterson, recently retired from the American Oil Company, and now an audio-visual consultant. (CONTINUED ON THE FOLLOWING PAGE 111)

**The Squibb Institute finds need for two Da-Lite Executive Electrol™ projection screens.**

A pair of Da-Lite Executive Electrol projection screens, one in the main conference room of the new Biological Research Building and the other in the Building's specialized Pathology conference room, have proved to be useful pieces of equipment in The Squibb Institute for Medical Research, New Brunswick, New Jersey. The reasons?

- Fully automatic operation • Built-to-last construction • Space conservation • Ease of handling • Sensible prices • Long range economy

Electrically operated Da-Lite screens (4 models in all) are designed for easy installation on wall, ceilings or within the ceiling. Sizes from 50" x 50" thru 20' x 20', with a price for every budget. The Squibb Institute purchased their Da-Lite screens from Raven Screen Corp., New York. Write for complete information and the name of a franchised Da-Lite dealer near you.

NEW PRODUCTS AND ACCESSORIES FOR PRODUCTION AND PROJECTION

Plio-Magic Filmstrip Case

## Plio-Magic Filmstrip Disc Case Introduced by Plastic Reel Corp.

☆ The introduction of the Plio-Magic Filmstrip Phono Record Shipping Case by the Plastic Reel Corporation brings a new answer to industry's need for handling of widely-used sound slidefilm (filmstrip) media. The new case holds eight filmstrip containers and discs, has a strong handle for easy carrying.

Plio-Magic products may be purchased direct from the Plastic Reel Corporation of America, 612 Boulevard East, Weehawken, N. J. On the West Coast, contact PRC offices at 1133 Cole Avenue in Hollywood.

## New Lightweight Vidifilm Camera Provides Improved Picture Image

☆ Vidifilm, Inc., has a new lightweight combination video and film camera, the Model VC-16-1FA, which weighs only 32 pounds, complete with lens and containing 400 feet of film. The new Vidifilm camera exposes 16mm color film while simultaneously televising the exact film images to any number of television monitors.

New configuration improves t.v. picture quality while cutting size and weight by more than 25 per cent, according to the manufacturer. Use of the Eclair NPR 16mm camera permits self-blinded synchronous operation while maintaining professional film standards. Magazine change time remains under 10 seconds.

This specializing manufacturer Vidifilm Model VC-16-1E/A camera,

also has a new Console Control Station, Model MSK-1000 which is a transistorized, miniaturized version of previous components. The new, smaller console measures only 32" wide by 16" deep and 20" high. Three Vidifilm cameras can be monitored from this station, with communication by the director to each cameraman by headsets. Entire unit, including three cameras, operates from a single 110-volt, 15-amp wall outlet.

Write Vidifilm, Inc., Suite 500, 8730 Sunset Blvd., Hollywood, Calif. 90069, for descriptive technical literature and availabilities. •

## Mole-Richardson "Mickey Mole" Offers Focusable Quartz Light

☆ The new "Mickey-Mole" a focusable 1,000-watt quartz light with variable beam from spot to flood has been announced by the Mole-Richardson Co. The studio lighting fixture can be used with 12

different, standard ASA-coded quartz tungsten-halogen globes.

The globe is mounted in a stationary socket, only the reflector moves when focusing. Mickey-Moles are available with a complete group of accessories and in easy-to-carry kits. Write for bulletin 108 to: Mole-Richardson Co., 937 No. Sycamore Ave., Hollywood, Calif. 90038. •

## Angenieux 10 x 24 F/2.6 Zoom Lens Available for Mitchell BNC

☆ An Angenieux 10 x 24 (24mm to 240mm) F/2.6 zoom lens with viewfinder for Mitchell BNC cameras is available now from Zoomar International, Inc. The lens is supplied with an integral camera base lens support assembly and was designed for rapid set-up in studio or location operations. Design features include a large 4:1 zoom crank clutched at both ends for another zoom action. Ask our New Products Desk for further descriptive data if desired. •

## New "Rotomatic" Slide Projector Features a 500-Watt Quartz Lamp

☆ The new Sawyer's Rotomatic 707AQ slide projector provides automatic focus and uses a 500-watt quartz iodine projection lamp for maximum screen brightness.

Introduced by Sawyer's Inc. (subsidiary of GAF) through their

Rotomatic 707AQ slide projector.

U. S. marketing agents, H. A. Bohm & Company, this new projector features a solid-state electronic focus system. The user manually adjusts focus for the first slide and then the auto-focusing system takes over.

The Sylvania Super Q (quartz-iodine) lamp used in this equipment has a rated life of 50 hours and provides constant high light output at full 500-watts through its entire life, without yellowing or dimming with age and use. The Rotomatic 707AQ projector operates on ordinary household current, 105-125 volt, 50-60 cycle AC, without need for special adapters, plugs or transformers. Magazine (tray) capacity is 100 slides. Ask our New Products Desk to obtain descriptive data and dealer sources.

\* \* \*

## Audiscan System Puts 26 Minutes of Sight Sound in One Cartridge

☆ A completely self-contained lightweight portable projector which features synchronized sight/sound in one sealed cartridge is the new Audiscan System. The unit weighs less than 13 lbs. and provides up to 26-minutes of screen time in its cartridge.

The projector is made by Audiscan, Inc., Bellevue, Wash. •

## Need More Data on Products? Drop Line to our Reader Service

☆ A single airmail postcard or your company letterhead request to the New Products Desk, BUSINESS SCREEN, 7064 Sheridan Road, Chicago, Ill. 60626, will bring complete product literature on any items reviewed in these pages.

Ampex closed-circuit TV monitor.

## Ampex Unveils Three Professional Quality Closed-Circuit Monitors

☆ The Ampex Corporation has introduced three new professional-quality closed-circuit television monitors, usable with any t.v. system of this type. Models now available are the 17-inch VM-617, solid-state, selling at \$499.95; a 23-inch monitor, VM-623, also solid-state, at \$549.95; and Model VM-627, a vacuum-tube 27-inch monitor listed at \$499.95.

All three monitors are said to provide a high-quality picture and have a horizontal line resolution of 800 at the center of the screen. All feature front operating controls and are offered in all-metal cases with side-carrying handles.

## "Film Master" Timer Watch for Instant "Read-Out" of Footage

☆ A new film timer, the "Film Master" provides instant "read-out" for elapsed film footage during 35mm production. It has been introduced by the Feldmar Watch Company of Los Angeles. Twin film scales are calibrated in single-foot and 90-foot increments, respectively, to a total of 5,400 feet. A third scale indicates elapsed time in seconds and minutes.

The timer is Swiss-crafted with Incabloc shock protection and it includes a "split-action" mechanism that permits "take-offs" and interval timing for specific scenes and film sequences. Priced at \$60, it also features a separate reset control activated only when stopwatch is not in motion. Direct inquiries to our New Products Desk

F&B/Ceco Has U.S. Exclusive for New Color Process Make-Up Kits

F&B/Ceco, Inc., motion picture equipment supplier, has been appointed exclusive U.S. distributor for the Research Council of Make-Up Artists' new color process professional make-up products.

A complete RCMA basic kit containing over 65 items of foundation bases, eye color, lip color, mascara, lotions, brushes, puffs, etc., plus an attractive compact case and step-by-step instructions, will sell for \$75. The kit has been carefully prepared to include all the make-up items required for the latest type color film stocks, including Eastman Kodak Ektachrome ECO 7255, EMF 7256, EF 7257, and EF 7258, color negative 5251 and Anscochrome professional 242. It is also suited for tele and taped color compatible television use, as well as theatrical make-up applications.

The make-up kits will be available from all F&B/Ceco branches plus leading film equipment dealers throughout the country. In addition, a large individual and replacement stock will be carried at F&B/Ceco's main New York office. A complete description and price list will be sent free upon request to Ron Groen, F&B/Ceco, 25 West 43rd Street, New York.

#### Cine-Chrome Laboratories Adds 35mm Daily-Basis Color Service

Cine-Chrome Laboratories, Inc., Palo Alto, California, has added facilities to provide daily service in the developing of 35mm Eastman color negative and color prints. Also available are 35mm silent or sound release prints, scene-to-scene color and exposure corrected, and Cinex strips.

The West Coast laboratory continues its services for developing original 16mm Ektachrome, IS, EF, reversal print, color internegative and color positive release material as well as related services. A complete price list and service data are available on request from Cine-Chrome Laboratories, Inc., 4075 Transport St., Palo Alto, California 94303.

\* \* \*

#### Announce Expanded Services for Stokes' Slide and Filmstrip Dept.

Several new services have been announced by the Slide and Filmstrip Department of Bill Stokes Associates, Dallas, Texas. The firm now supplies super-slide duplicates from any size transparency.

This unique service is the result of new camera equipment designed and engineered by executive vice-president John Stokes. The camera uses 100-foot rolls of 46mm film.

Four years ago, Bill Stokes began using Eastman 6008 internegative material for shooting filmstrip masters. Currently, the Texas firm which bears his name is animating an average of more than two filmstrip masters per day and it uses Eastman 6008 internegative exclusively for the production of 35mm duplicates in large quantities.

Audio tapes and discs for filmstrips are also produced. Jack Benton, formerly with the Society for Visual Education in Chicago, heads the department, located at 5527 Dyer, in Dallas.

\* \* \*

#### All-Day Processing of ECO-2/7255 Announced by Bebell & Bebell

☆ A new all-day processing service on Commercial Ektachrome ECO-2/7255 motion picture film is now available at Bebell & Bebell Color Laboratories, Inc., New York.

By installing a separate processing machine, the Bebell lab is now offering producers, optical houses and animation firms ECO-2/7255 processing in mornings and afternoons as well as in the evening. Previously all processing of this emulsion was available only during the night hours.

## Egghead FOR HIRE

*... works on premise that a picture is worth as many words as it fails to speak ... designs visuals that help make pictures talk ... writes disciplined audio to insure they talk persuasively.*

Like to kick this working thesis around when you next embark on a film project? ... your's could be Script 303 bought by 40 odd clients since 1940 ...

## THE EDITORIAL VIEWPOINT:

(CONTINUED FROM THE PRECEDING PAGE 105)

ant. It is designed to assist architects, hotels and companies in the initial design or modification of conference facilities. Noting the number of such installations by both large and small concerns throughout the world (and others impending) this booklet serves a real need. It should also prove helpful to those who must evaluate conference sites for meetings, seminars, conventions and other activities involving sizeable group participation.

Included in the report are 25 key points to be considered in meeting room planning, schematic drawings and photographs for a typical conference room, lighting and seating diagrams, a planner's guide developed for the American Oil Company, and a bibliography on the subject which includes numerous references to such features which have appeared in the pages of BUSINESS SCREEN.

The report is available to non-members of the Association as well as its members. The member price is \$3.00 per copy; the non-member price is \$5.00. Quantity discounts are available. Contact the Publications Department, Association of National Advertisers, 155 East 44th Street, New York, N.Y. 10017.

### Brief Notes About Men Who Make Pictures

David W. Nelson has been appointed director of production services at Swanson Productions, Inc., Milwaukee, Wisconsin.

STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION (Act of October 23, 1962; Section 4369, Title 39, United States Code). 1. Date of filing: October 28, 1966. 2. Title of publication: Business Screen Magazine. 3. Frequency of issue: eight times annually at six-week intervals. 4. Location of known office of publication: 7064 Sheridan Road, Chicago, Cook, Illinois 60626. 5. Location of the headquarters or general business offices of the publishers: same. 6. Names and addresses of publisher, editor, and managing editor: Publisher: O. H. Coelln, 7064 Sheridan Road, Chicago, Illinois 60626. Editor, Managing Editor: same.

7. Owner: Business Screen Magazines, Inc., 7064 Sheridan Road, Chicago, Illinois 60626; Otto H. Coelln, 7064 Sheridan Road, Chicago, Illinois 60626; Robert Seymour, Jr., 442 W. 17th St., New York City, N.Y. 10019.

8. Known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages or other securities: none.

9. Paragraphs 7 and 8 include, in cases where the stockholder or security holder appears on the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which the stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bondholder, owner, names and addresses of individuals who are stockholders of a corporation which itself is a stockholder or holder of bonds, mortgages or other securities of the publishing corporation have been included in paragraphs 7 and 8 when the interests of such individuals are equivalent to 1 percent or more of the total amount of the stock or securities of the publishing corporation.

10. This item must be completed for all publications except those which do not carry advertising other than the publisher's own and which are named in sections 132, 231, and 132, 234, Postal Manual Sections 435a, 435b, and 435c of the United States Code. A. Total no. copies printed (net press run) average no. copies each issue during preceding 12 months: 8000. Single issue nearest to filing date: 8,600. B. Paid circulation: 1. Sales through dealers and carriers, street vendors and counter sales (average no. copies each issue during preceding 12 months): 300. Single issue nearest to filing date: 383. 2. Mail subscriptions (average no. copies each issue during preceding 12 months): 7,100. Single issue nearest to filing date: 7,632. C. Total paid circulation (average no. copies each issue during preceding 12 months): 7,400. (Single issue nearest to filing date: 8,017. D. Free distribution (including samples) by mail carrier or other means (average no. of copies each issue during preceding 12 months): 1,040. (Single issue nearest to filing date): 583. E. Total distribution (Sum of C and D) (average no. of copies each issue during preceding 12 months): 8,400. (Single issue nearest to filing date): 8,600. F. Office unaccounted (spoiled after printing) (average no. copies each issue during preceding 12 months): 100. (Single issue nearest to filing date): none. G. Total (sum of F and 10) should equal net press run shown in A): (average no. copies each issue during preceding 12 months): 8,600; (single issue nearest to filing date): 8,600.

I certify that the statements made by me above are true and complete.

O. H. Coelln, Publisher

## A Name with a Purpose

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

formerly in charge of Sterling's  
Washington, D.C. branch, has  
moved to Chicago to head up Mid-  
Western sales and operations. •

## REFERENCE SHELF

### AMA to Publish Revised Edition of Medical-Surgical Film Catalog

The American Medical Associa-  
tion's catalog of selected medical  
and health films, containing des-  
criptive listings of more than 4,000  
film titles, will have a new and  
revised edition on January 2. More  
than 1,000 new entries have been  
added since the first edition was  
released in 1964.

The first catalog of films pro-  
duced by automated handling of  
data, it is primarily directed to  
those concerned with the educa-  
tion of medical students, interns,  
residents, physicians in all speci-  
alties and participants in fields  
allied to medicine. All films listed  
are readily available in the United  
States and have been found useful  
by recognized review groups.

The revised edition not only up-  
dates previous material but also  
features a refinement and reorgani-  
zation of format. A more compre-  
hensive and more generic ap-  
proach to the teaching and learn-  
ing needs of its users guided the  
preparation of this comprehensive  
new work.

Copies of the AMA catalog of  
"Medical and Surgical Motion Pic-  
tures" will be made available with-  
out charge to qualified recipients  
in the fields noted above from the  
Medical Motion Picture Section,  
Department of Postgraduate Pro-  
grams, American Medical Associa-  
tion, 535 N. Dearborn St., Chic-  
ago, Ill. 60610. •

\* \* \*

### New DuKane Directory of Sound Filmstrips Lists 1,719 Subjects

☆ The Audio-Visual Division of  
the DuKane Corporation, St.  
Charles, Ill., has announced publi-  
cation of a new "Audio-Visual  
Source Directory of Educational  
Sound Filmstrips."

The second edition of this di-  
rectory lists 1,719 sound filmstrips  
(slidefilms) available in virtually  
every major curricular area. Most  
of these were produced by speci-  
alizing educational film com-  
panies and offered for outright sale  
to schools. An increasing number,  
however, are being circulated by  
private companies, trade and pro-  
fessional groups on a free-loan  
basis.

For example, in the new direc-  
tory, Cessna Aircraft offers an "air  
age" educational film library of  
eight complete productions, includ-  
ing one on "pre-flight facts."

The Delco-Remy Division of  
General Motors circulates four

sound slidefilms in color on auto-  
motive electricity; Federal-Mogul  
Service offers six subjects on auto-  
motive mechanics.

Victor Comptometer Corpora-  
tion's business machines division  
slidefilm, aimed at recruitment of  
Comptometer and punch card op-  
erators, is in wide demand among  
schools, particularly among guid-  
ance counselors.

Write: Audio-Visual Division,  
DuKane Corporation, St. Charles,  
Illinois 60174, for a desk copy of  
this useful directory on your com-  
pany, trade group or institutional  
letterhead. •

### Shell Molding Casting Process Shown in "Jewels for Industry"

☆ A new 14-minute motion pic-  
ture, *Jewels for Industry*, explains  
the benefits of the shell molded  
steel casting process. Produced by  
Pilot Productions, Inc., Evanston,  
Illinois, for Superior Steel Castings  
Company, the film demonstrates  
how the process eliminates many  
finishing operations; provides high-  
strength, light parts; and minimizes  
the need for machining because of  
precise tolerances.

This useful film traces early ex-  
periments with shell moldings, ex-  
plains the difficulties encountered  
and discusses research which ulti-  
mately led to the development and  
formulation of sand suitable for  
shell molding steel castings. Indus-  
trial users interested in this process  
may write for free loan of a print  
to Superior Steel Castings Co.,  
Benton Harbor, Mich. •

\* \* \*

### "Dig Big" Shows Contractors the Benefits of BLH-Lima Excavators

☆ Baldwin-Lima-Hamilton's Con-  
struction Equipment Division's new  
film, *Dig Big*, is showing how con-  
tractors can profitably apply BLH  
Lima excavator equipment on proj-  
ects ranging from major rock cuts  
on highway construction to the  
building of dams and breakwaters.

In this 22-minute sound, color  
film (16mm) the shovels and back-  
hoes pictured on various projects  
range in capacity from one and  
one-half to eight cubic yards. The  
basic theme: where production  
counts, big excavators, sized to  
permit use of bigger and fewer  
haul units and to reduce drilling  
and shooting requirements, are the  
key to profitable operations.

To arrange for showing: contact  
BLH Lima distributors or write the  
Advertising Department, Baldwin-  
Lima-Hamilton Corp., Lima Plant,  
Lima, Ohio 45802. •

MAC

**IN THIS ISSUE:**  
U. S. Navy films  
help prepare officers  
for management role.

At the right, a powerful documentary film,  
"The Odds Against", is awakening the public  
to need for updating our correctional system.

At left, 8mm adds flexibility  
to training films projected by  
the Weyerhaeuser Company . . .  
public relations benefit as  
millions see "Tomorrow's Trees".

Right: mounting demand for color film processing  
eased by model lab facilities now in operation.

## Capture 3 million people for 5 minutes.

Just give us an interesting and informative 5-minute film and we'll do the rest. We'll make sure that it's seen by people you want to interest and inform, people who want to know, people on the go: in airports, resorts, community groups, and in the home on TV.

With only 150 prints, we'll get you up to 7,000 showings: up to 2,500 showings per year in our free Skyport Cinema; up to 2,000 resort showings during the summer months; 2,500 community shows (clubs, churches, schools, and travel groups); and hundreds of telecasts.

Your film can be specially produced or a Digest "liftout" from a longer film already made. Either way, in the hands of Modern, it becomes a powerful, low-cost communications tool to tell your sales or corporate story to millions of people throughout the country...in only 5 minutes.

For information about Modern's markets and opportunities for your 5-minute Digests, contact your producer or write for "The Facts about 5 Minute Films." Modern Talking Picture Service, Inc., 1212 Ave. of the Americas, New York, N.Y. 10036.

For those in Line and Staff Management, who supervise the work of others:

# SUPERVISOR TRAINING ON HUMAN RELATIONS

Every Company's Chief Executive knows the importance of having all managers and supervisors develop a deep understanding of human behavior... and how to successfully achieve better human relations with others... how to develop an esprit d'corps, which will have everyone trying harder... to achieve more.

**Why so many management failures?** One of the country's largest institutions in its field, after researching the problem, discovered that of those who fail as managers... 2% do so because they lack technical knowledge... while 98% fail because they lack "people knowledge" and how to work with others.

**How to gain "people knowledge"** "SUPERVISOR TRAINING ON HUMAN RELATIONS" is a complete 16 hour course, including filmstrips, manual and supplementary material, which dramatically demonstrates how to successfully handle such supervisory responsibilities as:

- Promoting Cooperation
- Interpreting company policies
- The Supervisor as a representative of management
- Maintain discipline... and many other equally important supervisory responsibilities

**How to "judge" the program before you buy** Don't take our word for it. Our "preview" offer permits you to "see and judge" the program for yourself. A small handling charge, credited to the purchase price, allows you a 5 day examination period of your choice.

## SAFETY FILM by PARTHENON

Since our people had written classic driver safety films "An Eye for the Road" while still at MGM, it was natural that the new Parthenon Pictures would be active in the safety film field. Most titles have won numerous awards (six NCFS first prize plaques) and are recommended by the American Insurance Association.

**OFFICE AND HOME SAFETY**

a  
byron  
plus

Color Additive printing is one more "plus" in Byron's favor and yours. Say goodbye to subtractive printing with its less-than-precise gelatin filters. Color Additive printing gives a consistency of color and sharpness of image that never varies . . . print after print after print. Skilled Byron people program a control tape that tells the printer what to do. Three light vanes control intensity of the primary colors red, green and blue . . . for perfect scene-to-scene color balancing. Starts, stops, fades and dissolves are programmed too. Result: Precision and consistency . . . yours at Byron, where film producers the world over turn for the finest in 16mm "Color-Correct" prints . . . only at Byron.

### U.S. Dept. of Commerce Notes Optimistic Outlook Toward 1967

☆ American industry is optimistic over the outlook for 1967, according to U. S. Secretary of Commerce John F. Connor. The Secretary has just released (early January) the 1967 edition of "U. S. Industrial Outlook."

Published by the Department's Business and Defense Services Administration, the "Outlook" analyzes the prospects in 78 individual industries, accounting for 60 per cent of manufacturing and all of the construction industry and the wholesale and retail trades. In addition, the report presents selected data for all other manufacturing industries, with complementary information for all States and major cities.

According to the 1967 "Outlook," 14 of the 78 industries will grow by more than 10 per cent; 37 anticipate increases between five and 10 per cent, 24 are expected to expand by less than five per cent. No comparable estimates were made for the remaining three.

Entry Deadline is February 20th for National Safety Film Contest

☆ Entry deadline for the 1967 Safety Film Contest, conducted by the National Committee on Films for Safety, is February 20, 1967. Outstanding motion pictures and slidefilms on accident prevention, produced or released during 1966 are eligible for this 24th annual contest which is judged by the nation's foremost authorities in fields related to safety education.

Awards are made for motion pictures in the following categories: programmed television and theatrical subjects; television spots and shorts; occupational, home traffic and transportation films; and general safety pictures. Sound slide-films are considered for awards in a separate category.

Bronze plaques are awarded the outstanding films and "Awards of Merit" certificates are given other entries deemed as making special contributions to contest objectives. Films made for "instructional" or "inspirational" purposes will also be judged separately.

There is no charge for contest entries nor for the awards subsequently given. Entries will be accepted only for films *delivered*

— all charges prepaid to Committee headquarters in Chicago. Films are returned, charges collect, in late April following their review by pre-screening committees and contest judges.

Write for entry forms to William Englander, secretary, National Committee on Films for Safety, 425 N. Michigan Ave., Chicago, Ill. 60611. Or phone him at area 312/527-4800 if you're in a hurry to meet the February 20th deadline.

### Computerized Media Cataloging Considered by DAVI Task Force

☆ Present and future use of electronic data processing for the cataloging and booking of educational media for schools was considered by a task force representing some 25 specialists from education, government and industry meeting in Washington, D. C. on October 27-28 under the auspices of the National Education Association's Department of Audiovisual Instruction.

As a result of reports on educational projects now making use of the computer for film distribution to schools in California, Florida, New York and Michigan, plus analysis of more compre-

hensive and innovative programs to come, the task force concluded its two-day session by assigning work groups the task of developing guidelines and tentative standards in four specific areas.

Group I, a task group on Library Premises and Development, headed by Sidney Eboch of Ball State University. Group II, considering the Coding of Material (for booking and cataloging) chaired by Charles Bidwell of Syracuse University. This group was expected to report within 30 days at which time a coding project involving 14 New York State Boards of Cooperative Educational Services.

Group III, concerned with Descriptive Cataloging, is headed by Ford Lemler, University of Michigan, and Group IV, charged with international coordination of force activities, has Robert Pease, former acting director of the National Media Council and now Peace Corps executive, as chairman.

# Niles produces "One Reach One"

A syndicated television  
series starring Ralph Bellamy

The series, now in production at Niles, is a radical departure in religious television programming. When completed, the first segment will consist of 13 half-hour documentary films, which will probe with stark realism some of the burning moral and spiritual issues confronting society today. Under the title of, "One Reach One", the series will be ready for television syndication in the Fall of 1967. Ralph Bellamy, pictured at bottom left, hosts each film. At top right is a clip from one of the programs, titled, "Marriage, A Simple Glory." At bottom right is a scene from another film, "The Sexy Society." The series is sponsored by the Parish of the Air of the Episcopal Radio & TV Foundation of Atlanta, Georgia.

SOUND

BLIMP PROGRAM

MODEL 120S (SPECIAL)

***the most comprehensive in the industry—***  
*exemplifying the unique versatility of the Arriflex 35 professional filming system*

The three sound blimps in the Arriflex 35 program cover every practical sync sound filming need. Combined with Arriflex 35 cameras, they perform to highest sound-stage standards and produce theatre-quality footage with outstanding production economy. Maximum noise isolation is achieved by means of a complex, 10 stage lining, controlled camera suspension and other sophisticated Arri design techniques. Thru-the-lens viewing is an outstanding feature of all Arri Blimps.

## THE MODEL 120S (SPECIAL)

This extraordinarily capable Blimp features: Thru-the-lens reflex viewing; external three-position follow-focus control; external lens diaphragm control; two-position Distance and F-stop scales; AC or DC camera drive, via 117 v. AC, 60 cycle, single phase Arriflex synchronous motor, from power lines, or via Arriflex 24 volt, DC, Governor Controlled Motor from 24 volt battery supply; Extra-large front port with clear aperture for lenses as short as 18mm (Schneider or Cooke); ready access to lenses, magazine or camera through three large access doors; 400 ft. magazine capacity. On special order, model 120S Blimp, may be supplied with a special electrical system for use with Arriflex 35 2C GS sync-pulse / automatic clap-stick system.

## newsreel:

Sam Gale Named Vice-President of Sales for Capital Film Labs

Capital Film Laboratories, Inc., headquartered in Washington, D.C., has named Sam C. Gale, Jr. as vice-president-sales. He will be responsible for Capital's total marketing, sales and promotional activities.

According to the company's president, Alfred E. Bruch, "Gale was appointed to his new position

Capital man-on-move: Sam Gale

because of his impressive track record of the past three years. Besides generating a majority of our new business in Washington, Sam

was chiefly instrumental in developing our new Miami, Florida laboratory now in operation . . . with very encouraging results.

"Gale also originated and coordinated Capital's advertising, direct mail and publicity program which has paid off in increased customer company understanding," Bruch said.

Prior to joining Capital in 1963 as a sales engineer, Sam Gale was a writer and director of industrial motion pictures for General Electric in Burlington, Vt. and holds a degree in advertising from the University of Minnesota's School of Journalism.

### Honor Founders at 20th Birthday Meeting of Chicago Film Council

The 20th anniversary of the Chicago Film Council, held on November 17th, presented the founding members of that organization: its first president, Ralph Creer of the American Medical Association; William Kruse, a-v veteran and film writer; and Wesley Greene, founder and president of the International Film Bureau.

Creer was presented with an inscribed gavel and Kruse received an honorary membership from CFC president Robert Seipp,

Pioneer president Ralph Creer (left) receives gavel from Bob Seipp (right) as Frank Bronwell beams approval.

WTTW-TV staff executive. The anniversary program arranged by Frank Bronwell surveyed the progress of educational and informational films during the past decades. As chairman of the 17th International Film Festival sponsored by the Council, Greene commented on the need for competent film judges to "raise the standards of all such events."

Sequences from early educational films, presented by William Kruse, showed the many improvements in techniques now being applied in teaching media. A well-attended meeting included guests from New York, Washington and San Francisco.

### Lions Observe 50th Anniversary With Worldwide Film Showings

Currently previewing around the world as it helps launch the 50th anniversary of the Lions International, is a new 15-minute color motion picture which traces history and development of this service organization. Produced by Wilding, Inc. and translated into nine languages in addition to its English version, the film helps bring Lions' groups the complete story of their clubs' programs for aiding their fellow men.

A total of 457 color prints made possible simultaneous showings in many lands and throughout America as members of 20,000 clubs gathered at various district banquets on the evening of January 14th. Lions International currently has eleven worldwide projects designed to aid the blind, conquer and control polio and helping to develop and improve the lives of young people everywhere.

Clubs have also engaged in

and 700,000 civic projects. The film's early innovation of the blind was a major member of the Lions and members were instrumental in having "White Cane" traffic laws passed in many countries.

The anniversary film is narrated by international president Edward M. Lindsey and among its foreign language versions are prints in Farsi, Finnish, French, German, Italian, Japanese, Portuguese, Spanish and Swedish languages. Following the Lion's District banquet gatherings, prints will be made available to local clubs for community group and television release.

### United Air Lines "Film of Year" 45-Minute Sky-View of America

Promising to be one of the "films of the year" in 1967 is a forthcoming United Air Lines 45-minute color picture, *Discover America*, now in finishing stages under the supervision of Producer Reid H. Ray. Here are some of the advance highlights:

Every scene of this all-American panorama of travel was shot

from a helicopter. Producer Ray built on his experiences gained in filming the other outstanding United Air Lines' film on Hawaii and scenes for *Discover America* are said to have notable impact.

Narration, recorded in mid-December, features the voice of Burgess Meredith.

Finally, for the first time in any documentary-television film production, according to its creators, the picture uses Igor Stravinsky music for a notable score. A 60-piece orchestra conducted by Robert Craft, Maestro Stravinsky's arranger and conductor, provides 29 minutes of music from Stravinsky's "Symphony in Three Movements," "Firebird Suite," "Petruska," "Agon," "Symphonies of the Winds" and other numbers. The orchestral background was recorded in Hollywood under the supervision of Reid Ray and John Grember, United Air Lines chief.

Release Date is January 27th

With an expected release date of January 27, the air line is planning to use the new picture as an integral part of its 1967 advertising campaign.

### Industrial Safety Films Needed on These Topics Say the Experts

There's real need for industrial safety films in some very special areas, according to a recent survey of experts in that field made by the Audio-Visual Aids Committee of the Industrial Conference, National Safety Council and the National Committee on Films for Safety.

Safety films most needed for supervisory and employee groups include these subjects: attitude, housekeeping, falls (same level lift trucks, payloaders, lifting and handling material, machine guarding, and ladders. Communications among people is another critical area of need for both supervisory and employee group showings.

Films for employee group showings in these subject areas are needed: first aid, eye protection, hand tools, hard hats, foot protection, hand injuries, industrial hygiene and sanitation, scaffolding, other falls (different levels), safety belts and lines, new employee in-

## Camera Eye

THE EDITORIAL VIEWPOINT

Look for Important News About 8mm Sound and Other Technical Innovations in 1967!

What's ahead in technological advances in audiovisual equipment in '67? The most basic prediction certainly concerns advances in 8mm sound projection! An irresistible force in the economy of group film showings, the 8mm medium was in the financial news of recent weeks when the Norton Company's subsidiary, National Research Corp. (now referred to as Norton's corporate research division), developed a key sound system ingredient: a tiny silicon carbide diode which transforms electrical impulses from a microphone into flashes of light that "write" a sound pattern on standard black and white or color film.

This is basically a "home" movie development at present and primarily concerns 8mm film projectors to which the sound system can be added at about \$25 a unit in mass production. It is said to work especially well on the new Super-8 filmbase which has adequate room for the Norton sound track.

But that's a bit distant (it will take many months to modify home movie cameras and could be done more easily on 16mm equipment designed for conventional sound systems). What we're concerned with our 1967 innovations and look for (1) new 8mm sound projectors, especially in the cartridge-load field; (2) look for new interest in 8mm magnetic sound tracks following the development of multi-magnetic tracking duplicators (by Bell & Howell for Kodak development); and (3) look for lower cost in highly-portable 8mm sound equipment that could "break" the field wide open.

16mm sound projection? It continues to be the "standard" of group presentation, fortified by educational, industrial and church inventories of 600,000 to 700,000 machines that currently need *more and more prints* to supply the demands of their viewers.

There will be still other developments affecting slide making and projection; dual-purpose 8mm sound projectors, etc. We'll keep you informed with authoritative, experienced analysis of each new tool when it has reached a state of *marketability* and *dependable use* in the audiovisual program. Note those key words.

U. S. Senators George Murphy, Charles Percy Give Nation a Strong Communications' Team

When Illinois' senator-elect Charles Percy takes his seat in the U. S. Senate Chamber this month, the field of audiovisuals will have two very well informed constituent members of that august body. Sen. George Murphy (R. Calif.) who recently said he has "never been in better physical condition" is a former Technicolor executive and a great believer, like Chuck Percy, in the value of effective a-v communications. ### *Expo 67, Canada's 100th Centennial Showcase Nears Completion for Opening Day: April 28*

With advance "passport" ticket sales of \$21 million and 90% of the fairgrounds completed, Canada's Expo 67 expects to have its big show ready for visitors on opening day, April 28, in Montreal.

Readers of BUSINESS SCREENS will get another look at the many intriguing audiovisual displays and exhibits at Expo 67 in another pre-fair special report now being developed for these pages. Like its predecessors in New York, Seattle and Brussels, this exposition of mankind's progress provides a unique laboratory for new tools and techniques of presentation and designers are making the most of it!

The overall theme "Man and His World" observes Canada's 100th anniversary in many unique exhibits by that country's government and its provinces. 70 nations are participating with pavilions that range from the Soviet's \$15 million showcase to displays of Burmese jewels and the 14th Century crown of the kings of Bohemia. The U. S. pavilion, a giant transparent geodesic dome designed by R. Buckminster Fuller, will include a 300-seat theater.

Expo 67 expects 35 million paid admissions

and officials have made careful preparation to house them. \$100 million in new hotels are being completed for visiting throngs; Expo has rented 80 apartment buildings and has obtained permission to use the facilities of 58 Catholic boarding schools during the summer period. A \$213 million subway system provides easy transport to the fairgrounds and at transfer points, the Expo Express will deposit visitors at four centrally-located stops within the fair itself. There's also an \$8 million dollar monorail which conveys visitors to many points adjacent to exhibits.

While the daily admission charge is \$2.50, 85% of the attractions will be free, including all exhibits and pavilions within the grounds. •

### *Network Estimates Over 9 Million Homes Now Equipped With Color Television Sets*

With the boom in color television receiver sets showing little sign of abating, one network recently estimated that 9,100,000 U. S. households had color sets as of December 1. There's continuing heavy demand for public service color films of real interest to viewers: travel, home arts and furnishings, fashions, gardening and sports subjects rate high among station program directors.

Contact your national film distributor for data on serving these color t.v. stations.

### *Will the American Film Institute Substitute Training Which the Industry Should Pay For?*

What is the primary purpose of the American Film Institute, for which hundreds of thousands of dollars are being appropriated by the National Council of Arts? Stated objectives most often quoted is that the Institute is to provide a training ground for young people seeking a future in film production.

The recent appointment of actor Gregory Peck to a key role suggests that the Hollywood contingent of the motion picture industry have much to say about the Institute's future. We find it strange that the multi-billion dollar prosperous entertainment and television industries should have to look to Federal grants for this "need", especially in a time of national budget restriction.

What is the wealthy Screen Actor's Guild doing about apprentice training? What chance has a youngster to find employment within the tightly-held organized crafts with their father-to-son tradition and closed ranks?

College and university film units would appear to offer the best chance to learn the business; independent film production is another key phase of the process. Community university theater activity serves as an excellent training ground for the actor, who also has

## BIG MESSAGE... SMALL BUDGET?

**WHY NOT A FILMSTRIP?** There's no faster, more economical, or dramatic way to get your message across. Complicated story? A colorful filmstrip can say it for you more clearly. Restless client? Let him relax while you project your best image. A lot of territory to cover? Filmstrips love to travel. Budget problems are gone! Filmstrips are comparatively economical to produce... and can be made to meet impossible deadlines. Release prints? One or ten thousand are unbelievably inexpensive. Contact us immediately. We can recommend filmstrip producers on whom you can rely.

Here at CFI your filmstrip producer is backed by a processing laboratory whose professional procedures and facilities produce the finest and the most consistent results possible.

better chance to getting started in small-city and educational television broadcasting.

But the last place to get training is with the union-dominated major and network studios and the least likely leadership for such a moment would seem to be those who represent these facilities. Let's hear *your* ideas on the subject.

\* \* \*

*Rocket Pictures and Better Selling Bureau Occupy New Headquarters Burbank Building*

☆ A 23-year saga of successful service to business and industry from its former quarters in Hollywood was climaxed last month when Rocket Pictures, Inc. (and its sales and distributing division, the Better Selling Bureau) moved into their custom-built new quarters at 1150 West Olive Street in Burbank, California.

According to executive vice-president Joe Russo, the expansion move was "long overdue" and required by this company's greatly increased production of films and filmstrips for business and industry. Rocket's new headquarters

*Rocket Pictures' new headquarters at Burbank*

provides administrative, creative and production facilities (including a new stage) for custom-tailored audio-visual programs. A new "ready-made" program is also in preparation to supplement those already available for business, industry, insurance and banking groups.

"And we hope," adds Russo, "to make this center a headquarters in Southern California for all methods of audiovisual communication." (CONTINUED ON THE FOLLOWING PAGE)

## The operation was a success...but the patient died

You, too, can lose "patients" through some small detail... such as titles not up to the standard of the rest of your production. Guard against loss of clients by protecting your large investment in time and money by a very small investment in Knight titles.

**KNIGHT STUDIOS**  
159 E. Chicago Ave., Chicago, Ill.

## Variety has no box office figures on our latest movie.

But that's alright. We find receptive audiences at national conferences, community gatherings, sales meetings and on television.

It's very good for your image.

Wolper Industrial Films concentrate on fresh approaches to business films while developing dynamic and exciting presentations for our clients.

If we never shoot for a "Boffo" at the Bijou, it's because the curves we're trying to feature have to do with sales

Byron's New Film Center and Laboratory  
 Washington, D. C. to be Ready by Next Fall

Reporting considerable progress on construction of his company's new laboratory building in Washington, D. C. is Byron Roubush, president of Byron Motion Picture. Centrally-located in the new light-industrial development area at North Capital and K Street the Byron Film Center was in the planning state for more than two years. It was designed by Thomas J. Stohlman, A.I.A.; mechanical engineers are Frank Sullivan Associates and the builder, E. A. Baker Company. Construction is expected to exceed \$1 million.

The new building will have three floors and a penthouse, totaling nearly 60,000 square feet. In addition to the laboratory, it will house offices, sound recording studios, editing room, vaults, machine shops, employees' cafeteria and lounge, and screening rooms (including two large preview theaters).

The Center's windowless building of modern design has a built-in hotel-type vacuum cleaning system and extensive air-filtering equipment. An adjacent parking area will accommodate 45 cars, plus two large loading docks.

Byron expects to occupy the new premises next fall.

Film Writers and Producers, Please Note

★ Thanks to our good friend Jack Kielty (he bears his name) for that holiday mailing pie quoting John Wesley Lord's timely reminder:

"Be thankful for your troubles identified with your job. They provide you with about half of your income. If it weren't for the things that go wrong, the difficult people you are required to deal with, the frustrations, the problems and the unpleasantness of your working day, someone could easily be found to handle your job for about half of what you are being paid. . . . The "jobs" that command his respect — and usually correspondingly his salaries — are the ones that demand unusual accomplishment."

**THE MOST USEFUL SOUND PROJECTOR EVER DESIGNED!**

MODEL 2000 16/16

## SIEMENS DOUBLE/SIXTEEN

The Siemens 2000 16/16 is an optical-magnetic sound projector interlocked with a 16mm magnetic deck—an unusual combination that can do unique things for you.

Use it as a preview projector, as a multi-lingual projector, as an editing projector! Use it as a supplement to existing facilities—or as a complete "sound studio in a suitcase." Use it for interlocked projection in your own studio—or on the run—in client's office, plant or wherever. The Siemens 2000 16/16 sound projector is the modest cost answer to dozens of sound film problems. Perhaps it is the answer to yours?

## Joseph Heads Public Relations for Lippincott-Margulies, Inc.

The appointment of Elliott Joseph as director of public relations for Lippincott-Margulies, Inc., consultants in design-marketing-communications, has been announced. He is former director of presentations for the Communication Design Center of Batten, Baton, Durstine & Osborn, Inc.

In his new post, Joseph will direct the firm's promotional and

public relations activities. A former intelligence officer with the 75th Infantry Division during World War II, he received his BS from City College of N.Y. and his master's degree at Columbia University. 42, he is married and resides in Manhattan.

Navy visual exec, Dick Stetler

## Stetler Re-Joins Navy to Head Visual Communication Division

Richard C. Stetler, former executive producer for Sun Dial Films, Inc., in that company's West Coast office, now heads the Visual Communication Division, Photo Graphics Department at the U.S. Naval Missile Center, Point Mugu, California.

Stetler previously served (for seven years) as producer, director and coordinator of motion pictures in the Aeronetic Division of North American Aviation and was in similar capacities at the U.S. Navy Photographic Center, Anacostia, D.C. for a 10-year period.

## New York Film Council Reviews Aims on Eve of 20th Anniversary

Critical analysis of the aims and objectives of the New York Film Council on the eve of that group's 20th anniversary was the featured topic of its November 16 meeting at Museum of Modern Art in Manhattan. The Council will observe its 20th birthday on February 13th.

Following up the challenge laid down by the Council's first president, Tom Brandon, at a June meeting where he posed the question as to whether the group was really viable or whether it had outlived its usefulness, the November program featured a group of six panelists, three of whom were charter members of the Council: Cecile Starr, Willard Van Dyke and Brandon. Consensus indicated that the NYFC should have less of an "AV orientation to film" and much more dedication to excel-

Actor Raymond Massey recently received a Certificate of Appreciation from Dr. James Lacherman, head of the U.S. Public Health Service, Auditorial Facility, for his outstanding performance and narration of that organization's orientation sound film, "The Watch on Health."

lence in films whatever the source.

At a subsequent meeting, Council president William Claibourne proposed a group of standing committees through which members could actively participate. It is hoped that as a result of this new plan there will be many more small meetings which reflect the interests of special groups and that regular Film Council programs can provide an interchange of ideas.

Begin preparation of the industry's most complete and dependable source for these services. Look to the pages of the 17th Annual Production Review for complete data.

## SIGHT & SOUND

### WHAT'S NEW IN PICTURES

"Challenge"—a Frank Discussion of Title 7 in the Civil Rights Act

The Illinois State Chamber of Commerce is the sponsor of *Challenge*, a new version of a film discussing the so-called "quota system" and interpretation of the Title 7 of the Civil Rights Act concerning employment.

Introduced by Senator Everett Dirksen (Rep. Ill.), the film concerns itself with establishing criteria for judging an employee on his merits and abilities, as opposed to his cultural or racial background. The frank discussion of this subject is moderated by Fahey Flynn; the 27-minute film was made by Wilding, Inc.

Available for free loan on letter-head requests from Modern Talking Picture Service, Inc., Prudential Plaza, Chicago, Illinois, *Challenge* replaces the 1964 version of the same subject.

\* \* \*

### Sound Filmstrip Series to Help

#### Casualty, Fire Insurance Salesmen

A new sound slidefilm program will soon meet a long-felt demand for sales training in the casualty insurance field. The six-part sound and filmstrip course, titled *How to Sell Casualty and Fire Insurance*, is being developed for the Better Selling Bureau division of Rocket Pictures, Inc.

"Top casualty underwriters and executives have been clamoring for this material for years," notes Dick Westen, president of Rocket Pictures. He notes that the new color program includes all guidance material to administer the course and that it incorporates the latest, just advanced principles of learning.

For advance details write: Better Selling Bureau, 1150 West Olive Avenue, Burbank, Calif. 91506.

## The Editorial Perspective: a Commentary

**T**HE LISTING INVITATIONS are on their way to specializing distributors and producers who qualify for our 17th Annual Production Review issue and a new year is fairly begun! Our "collection box" contains a heap of evidence that this big book is easily the most imitated reference source in the industry . . . but the Production Review remains the only complete, facts-in-depth guidebook for the buyer and maybe that's why nearly 10,000 companies, trade groups, Federal agencies and ad companies will be using this dependable reference in '67 . . .

\* \* \*

### We Will No Longer Recognize Festivals Owned by Individuals

☆We've taken a positive step, long overdue, on the over-abundant "film festivals" and other "awards" programs which are not too-numerous, too costly and wasteful of the valuable film prints required to serve them. The only film award programs to be recognized for open listing in the 17th Production Review are those sponsored by non-profit or authoritative national and regional groups.

At least two or three other events are owned by private individuals, run to make money for the owners and lacking in group sponsorship. Why bother with these? Such events held in Chicago and New York last year had little substance for their numerous "winners"; jury membership was casually bestowed. But we also have little faith in events which regate factual films to second place behind the cinematic entertainment features for which they are really staged.

Rated as "first category" awards programs are such as The National Safety Film Contest, CINE's "Golden Eagles" and the Columbia Film Festival, to name just a few of those which will be covered in detail in the 17th Annual Production Review — our next!

\* \* \*

### "Lectures of the Year" Will Be Featured in Production Review

☆Speaking of awards, an avalanche of both words and pictures made it necessary for the Editors to move our own Annual Review of 1966 Film Awards feature into the forthcoming Production Review issue. That's a happy coin-

idence, though, because it's a fitting editorial "extra" that really belongs in that big book. We bring you a *consensus* report on the outstanding pictures of the past year, with special attention to those pictures which won multiple honors.

\* \* \*

### Chet Harmon Directs Promotion at the Du-Art Film Laboratories

In the news at presstime, Chet Harmon has been named sales promotion and public relations director of Du-Art Film Laboratories, Inc. His appointment to that post was confirmed by Irwin Young, president of the Manhattan-based film processing firm. He moves into this newly-created position from Americom 8mm Inc., where he served as sales manager. Americom is a Du-Art affiliate.

\* \* \*

### Graflex Names William Kasson to Head International Group

William J. Kasson has become manager of International Operations for Graflex, Inc. The company's new International Operations group replaces the former Export Department and plans are underway for assembly, production and a more comprehensive marketing effort abroad.

Michael D. Connelly has moved up to the post of administrator in Graflex' International Operations, reporting Kasson.

\* \* \*

### "Permaeel Express" Heads South With an Audiovisual Classroom

The Permaeel Division of Johnson & Johnson is "en-route" these days in an unusual three-car private train which began a tour of Southwest markets in early January. The new "Permaeel Express" will tour the nation, stopping off at various cities to conduct training classes for the company's distributor salesmen.

There's a classroom car which is the "heart" of the train, of course. It blends the decor of the Gay '90's with the latest in audiovisual equipment, including videotape recorder, closed-circuit TV slide projector, chalkboard, tape recorder and intercom system. The car seats 32.

\* \* \*

### Production Review Will Feature Business Film Producer Survey

Statistical facts about audiovisual markets are summarized in Tom Hope's annual survey data

(see page 32) and its rumored that the National Audio-Visual Association (dealer group) is moving into this area. A better way to get the facts to guide the *business film producer* on 1966 progress will be provided by our own forthcoming "Vital Statistics" survey data now being prepared.

Beyond this, there is a real need for figures on 8mm and 16mm sound motion picture projectors, sound slidefilm (filmstrip) equipment, etc. The National Association of Photographic Manufacturers should take part in that effort, perhaps merging its activity with that of NAVA.

\* \* \*

### Britain Shows "The Big Drive" to Promote Auto Sales Abroad

Film coverage in more than 70 countries extended the impact of Britain's Earls Court Motor Show to a worldwide audience of several

millions in a year when overseas orders have never been more vital to that country.

Highlighted in *The Big Drive*, a review of the show shot by Pathe News in Technicolor, is the car industry's thrust for exports. Arrangements for the film's dispatch were completed by the Films and Television Division of Britain's Central Office of Information; cinema showings and non-theatrical distribution abroad was organized in advance by Information Officers at each Embassy or High Commission.

Translated versions were supplied in Arabic, French, German, Greek, Italian, Brazilian Portuguese, Latin-American Spanish and Turkish. In seven minutes, *The Big Drive* surveys the entire range of car production in Britain. Models already established as best-selling lines abroad were featured together with newly-exported models. •

## The First German Industrial Film Forum

A Report by Our Correspondent, Dr. Hans Schaller

**T**HE FIRST GERMAN Industrial Film Forum, held in Dusseldorf from Nov. 30 to Dec. 3, 1966, provided film sponsors and producers of that country with an exceptional opportunity to survey production developments over the past two years. 110 films were shown and discussed by participants.

Taking part in the four-day meeting were representatives of the Federal Association of German Industry and the Federal Association of Employers, both from Cologne; the State Association of Industrial Employer Groups of Nordrhein-Westfalen, in Dusseldorf, and the Association of Industrial Film Producers, of Westbaden, Germany.

The committee in charge of forum programming limited itself to two categories of films, the first group (Category I) concerned films which, through information or impressions, would attract an average, cultivated and discriminating, interested broad audience to the general problems of economic life.

Category II embraced films which, through their informative content, would familiarize a specific, already-oriented and interested public with special problems of economic life. Guidelines were thus well established and jurors were able to evaluate films with greater detail.

Prizes of any kind, however,

were intentionally omitted. Instead, two grades were assigned, namely, "hervorragend" (outstanding) and "good." It was also noted that participation of films in the Forum was of itself a distinction earned. In Category I, which included 61 pictures, five films were awarded the citation of "outstanding" and 30 were scored as "good." Of the 49 films in Category II, eight were evaluated as "outstanding" and 16 as "good." In effect, more than every second film received special mention.

Open forum discussions centered around the "Industrial Film of Today" and "The Industrial Film and Its Public." Great benefit was also derived from the corridor discussions held in Dusseldorf's "Hall of Science" where the Forum was held.

Unanimity prevailed that the contemporary industrial film is an indispensable instrument of management, of information and training, of public relations and of sales promotion, in the broadest sense. If the correspondent may be permitted a personal observation, it would be that the industrial film should serve the interests of the sponsoring enterprise above all, and that its task is, depending on the subject matter, to achieve optimum success with the public at large or within a specifically and technically-interested special group at which its contents is aimed. •

# “THE ODDS AGAINST”

Told With Unforgettable Impact, the Case for Updating Our Correctional System Is Made in a Powerful Film of the American Foundation Institute of Corrections

**H**ELPING OVERCOME PUBLIC APATHY towards our system of corrections, a new motion picture created for The American Foundation Institute of Corrections has won deserved nationwide attention and the approval of experts in this field. *The Odds Against* produced in a starkly realistic documentary format, gets to the heart of its difficult subject with tremendous impact. The point which this picture makes so dramatically clear is that the great majority of the public loses interest in the offender the moment he is sentenced. It is precisely at this time that public interest should be at its height.

How much of the mounting cost of crime in the United States (estimated at 27 billion dollars annually) is fed by our failure to rehabilitate and restore those who can rejoin the society against whom they have committed a criminal act? *The Odds Against* builds its case through the life story of one John James Mitchell, a youthful offender involved for the first time in adult criminal behavior. This thoroughly unsympathetic role, brilliantly portrayed by actor Robert Viharo, presents a hostile, aggressive, dangerous and untrustworthy offender. Through this adroit approach, hearts and minds of the audience are sharply focused on the system of corrections itself.

### Organization Concerned With the Problem

The American Foundation has for many years concerned itself with this problem. Today the life work of Nellie Lee Bok, widow of renowned Judge Curtis Bok, i.e., “Star Wormwood”, its Institute of Corrections is directed and run by Frank Loveland, one of the outstanding figures in this field. Exploring the possibilities of film to help disseminate information and motivate public attitudes, the Foundation contacted Vision Associates.

Excited by the challenge offered in the field after spending considerable time at headquarters, Lee Bobker, Vision’s president and a

well-known writer, director and producer of such documentary films, proposed the eventual period of time spent in pure research. “Let’s survey the field and see what is needed,” he suggested. He traveled widely throughout the U. S. meeting with prisoners, wardens, academicians, psychiatrists, and legislators. In effect, Bobker became deeply immersed in our entire penal system.

The first of a recommended series of six films, *The Odds Against* welds Vision’s own

At age 22 . . . the odds are against John Mitchell becoming a productive member of society. At 22, he is no longer a child. He is, for the first time, involved as an adult in criminal behavior.

techniques with the highly-mobile Cinema Verite approach. Selecting Viharo for the key role, a background case history was created and John James Mitchell came to “life” as he was placed into the system from arrest through detention in a city jail, his trial and on to imprisonment in the penitentiary.

At every step of the way, the system was presented by the arresting detectives, interro-

John faces a difficult present and an uncertain future. A record of the charges against him permanently made. He is permitted a single telephone call — but there is no one to ca-

gation, booking, jail personnel, judges at jury and prison personnel. The film as written became one of the most complicated the producer had ever attempted. Permission had to be obtained from a wide variety of prisons and jails, including some of the very worst. Releases had to be obtained from hundreds of prisoners who were anything but anxious to find themselves clearly identified. It was a tribute to the prestige of the Institute’s director Frank Loveland, that both the technique and the film were possible at all.

For several months, Vision’s camera crew sought to transmit a truth almost too stron-

John Mitchell was imprisoned . . . separated from the outside world because there seemed no other way he could be corrected. It was at this precise moment the public lost interest in him . . .

“The Odds Against” was presented by  
The American Foundation  
Institute of Corrections  
and produced by Vision Associates, Inc.

In places such as these . . . the mass regimented prison . . . the possibility of changing human behavior is slight. Far too often, the majority of these prisoners pass through their term of sentence untouched, if not actually harmed . . .

At one point during his period of imprisonment, John Mitchell will become eligible for parole — a term much praised, criticized and often misunderstood . . . it provides a period of transition . . .

for film. Viharo, portraying Mitchell, was permitted to make up any lines he thought appropriate and, in one case, he tried to jump his bars and was physically decked by them while the cameras were rolling. A highly evocative and exciting still technique adds considerably in developing Mitchell's early years.

**Being Widely Shown Throughout the U. S.**

The result of all this rare combination of perfect casting, authoritative content and the Institute's leadership plus the creative skills so evident throughout *The Odds Against* is apparent as the film accomplishes its objective: drawing public attention through widespread television showings, to community and professional audiences, etc. Winner of the Chris Sautette as the best of its category at the recent Columbus Film Festival (its first competition), the film also received a silver medal award at the New York Film Festival.

It has been seen and praised by the President's Commission on Law Enforcement and Justice ("all the members who viewed it with unseemingly impressed" said Commission member Genevieve Blatt); the National Council on Crime and Delinquency; and the National Conference on Social Work. ("The film is the best I have ever seen . . ." said E. R. Gomberg, Executive Vice-President, of the Commission of Philadelphia).

**Supervised by Five Outstanding Leaders**

Every step of production was carefully supervised by five outstanding figures in the field: Myrl E. Alexander, Director of the Federal Bureau of Prisons; Peter P. Lejins, Professor of Sociology and Criminology, University of Maryland; Austin H. MacCormick, Director of the Osborne Association; Richard A. McGee, Administrator, Youth and Adult Corrections Agency of California; and Milton G. Rector, Director of the National Council on Crime and Delinquency.

The American Foundation premiered the film in Philadelphia last October 27. In the comparative few months after, response from community leadership groups, colleges and universities as well as television stations (who booked the film on prime time) has far outstripped anything within Vision's experience.

He is questioned exhaustively on the subject of how he has spent his years in prison. The unasked question is "what has the institution done to train and rehabilitate this young man?"

The cost of our failure with John Mitchell in dollars and cents is prohibitive. It is reflected in the cost of the crime in the United States now estimated at 27 billion dollars annually.

all its strengths and weaknesses, and their very presence in our prisons is dramatic evidence of the need for change . . . for a better way of dealing with the offender.

It is easy to take for granted the impact that a well-made film can have on major issues of our time. But this picture, *The Odds Against*, has brought together a literate yet poetic script, strong and highly-creative direction, dramatic evocative photography and sharp editing skills to become a prime example of what is possible in this field.

**These People Helped to Create a Great Film**

Irving Oshman, Vision vice-president and partner, split the direction with Lee Bobker; Helen Kristt, also a vice-president and partner of the firm, supervised operations in New York. Ray Long worked with Bobker on dramatic sequences while Morton Helig, well known for his superb film *Destination Man*, worked with Oshman. Morton Fuchs, whose skill is evident on other Vision productions, was assigned the complex editing task. To actor Robert Viharo goes our accolade for his realistic portrayal of John James Mitchell . . . a wanderer across the face of the land . . . in constant conflict with the law . . . for whom there were "the odds against."

Frank Loveland,  
Director of  
The American  
Foundation  
Institute of  
Corrections.

The response has been so extraordinary that the Foundation is enthusiastically moving ahead with subsequent films planned for this important series.

**Dramatic Evidence of the Need for Change**

The film's script makes memorable points: "There are, today, 340 thousand human beings in the United States who are confined in city and county jails or state and Federal prisons. They range in age from fifteen to eighty. They are from every income group and all segments of society. They have committed offenses that cover acts of violence and aggression . . . They reflect society as a whole, with

Today, in too many of our prisons, the workshop is simply manual labor designed to fill idle hours. A more productive in-prison program provides both education and vocational training for inmates.

## Facts About Audiovisual Markets in 1965

### Market Review: Nontheatrical and Audiovisual in 1965 Shows Expenditures by Business & Industry Lead Field

**T**HE AUDIOVISUAL MARKET in the United States has taken another significant upswing with an estimated \$739 million total of expenditures for equipment, materials and services, according to the SMPTE "Market Review Nontheatrical Film and Audio-Visual—1965" report.

Since statistical records were begun for the nontheatrical film and audiovisual field in 1956, it has grown twice as fast as the nation's economy, showing an 83 per cent growth.

Outlays last year increased \$72 million, an 11 per cent gain over 1964.

Schools continued to spend at a good rate for audiovisual items, enjoying the best gain of all segments of the market—up 19 per cent, reaching \$282 million. It accounted for 57 per cent of all the new 16mm projectors sold, or 25,500 machines.

#### Business Budgets Lead Field

Business and industry held its dollar lead in audiovisual spending for the total market because of its heavy expenditure for film produc-

tion, release printing and film distribution. All business spending was up seven per cent for a total of \$319 million.

The leading category of expenditure was for salaries and administrative expenses of AV coordinators, up \$30 million. This 15 per cent increase over the previous year was due, in part, to higher employment.

#### Over 10,000 Films Produced

For the first time in a number of years, all segments of the nontheatrical field enjoyed gains in the number of films produced. The total passed the 10,000 mark for the second straight year.

Production of films in the specialized field of medicine and health showed the most dramatic increase. Film production was up from an estimated 290 to 390, a 34 per cent gain. Education also registered a sizable percentage increase, up 14 per cent with 1,370 films—a gain of 170.

Those were some of the highlights of the 1965 report, prepared for publication in the December issue of *The Journal of the Society*

of Motion Picture and Television Engineers by Thomas W. Hope, of the Motion Picture and Education Markets Division, Eastman Kodak Company.

#### 61,000 Work in Audiovisuals

The report indicated that an estimated 61,000 persons are working full time in all areas of audiovisual communications. A sample of 80 different organizations showed that employment was up nine per cent. Education had the greatest increase, an estimated 25 per cent.

The swing to color in production of nontheatrical films continued, including films for education—despite the lower cost of black-and-white films. This color trend has been influenced by the color boom in TV programming.

Included among segments showing increases were the production of community service agencies' nontheatrical entertainment films (up 11 per cent to 210 titles) and films sponsored by religious organizations (up five per cent to 210 films).

#### Increase in Film Distribution

Nontheatrical film distribution in general gained strongly in 1965, showing a 10 per cent increase for a total estimated at \$126 million. In the case of business and industrial films, distribution outlays were

up almost 12 per cent to an estimated \$57 million.

#### Business Films Increase 8%

Expenditures for the production of business and industrial film were up about eight per cent to approximately \$98 million, while release printing reached \$55 million, a gain of almost six per cent over 1964.

In total, an estimated 10,671 nontheatrical films were produced in the United States in 1965, a gain of six per cent over 1964.

The SMPTE report records, for the first time, the number of 8mm films now available to schools. It shows a total of 776 titles for 1965 (including 286 in super 8) and most are single-concept.

#### Has Strong Growth Potential

Economists, the report suggests, probably would classify the nontheatrical film and audiovisual field as a healthy, young industry with a good growth record and even better growth potential. For the past three years, the annual increment has shown an increase: 1963—\$22 million, up 3.6 per cent; 1964—\$29 million, up 4.5 per cent; and 1965—\$72 million, up 11 per cent.

"In general," the SMPTE report points out, "1965 was a highly successful year for the audiovisual industry. Morale was high. Most of

## The Navy Prepares Managers

### New Film Series Takes Up Leadership

**M**EN OF THE U.S. NAVY who serve in the civilian sector of the military establishment—in shipyards and other industrial complexes which supply the ships at sea—are, in fact, commanding officers and staff members but they also serve in the role of civilian management and as such must learn the complex procedures and nuances of a kind of command which differs from leadership on a ship afloat.

A new sound motion picture, *So, Now You Have An Agreement*, recently completed by

Sun Dial Films, Inc. for the Navy, is one of a series of such films on leadership for naval officers. The primary purpose of this film is to help prepare officers for their duties.

The film's opening sequences begin at the bargaining table as negotiators complete the signing of an agreement completed under the guidelines of Executive Order 10988, proclaimed by the late President Kennedy in 1962. This is a guiding basis for Navy managers.

Sequences then move into illustrations of the problems involved in just living up to the agreement. *How should overtime be distributed? What is reasonable cleanup time? What constitutes legitimate sick leave?*

Some of these problems are easily solved by give and take, compromise and by a measure of good will. Others must go on to arbitration. The naval officer in a managerial position finds that management duties can be just as exacting as his previous military command.

*So Now You Have An Agreement* was made by Sun Dial in lip synch, on location in an actual Navy facility with a cast of 29 professional actors. It does not take sides or attempt to show who is right or wrong in industrial relations but rather tries to tell both sides of the story and to illustrate the range of concerns which may confront the naval officer in the civilian sector of management.

Management training of Naval Officer at the bargaining table with union representative.

Some labor problems are easily solved by give and take, by compromise and a measure of good-will.

To the worker, certain questions may be critical for example, how should overtime be distributed?

problems were problems resulting from success—more active film and audiovisual programs. As a result, the greater demand for products caused shortages and delayed deliveries to crop up in the last year."

#### 1966 Should Be Greatest Yet

An important note for the current year also is incorporated in the 1965 report:

"Already, sales activity in the first three quarters of 1966 indicate that it will be the banner year, especially for the educational market. Practically all equipment lines have had record sales. Classroom film distributors report exceptionally high sales of filmstrip and motion picture prints. Motion picture laboratories are having trouble keeping up with the demand for prints."

Commenting on this phase of the report, Hope said: "Statistics for 1966 further indicate that total dollar volume is going to be the greatest that the audiovisual field has experienced."

#### Filmex Completing Three Pictures for the General Development Corp

The General Development Corporation has engaged Filmex, Inc., to produce three new business films to protect land and home values in Port Charlotte, Port St. Lucie and Port Malabar, Florida. The sales films were placed with Thomas Victor, vice-president of Filmex' Business Film Division, by Spire Advertising, in Miami.

Ordon MacRae will host and narrate the films, which will cover various aspects of community living in these areas.

Under the supervision of Filmex South in Fort Lauderdale, the films will be directed by Frank Bibas; produced by Brud Talbot and photographed by Harry Walsh and Clifford Poland.

#### WHAT PRICE CONSERVATION

A film on the destructiveness of man in nature, recently released by Colonial Williamsburg, depicts streams foaming with detergents and roadsides adorned with beer cans and other identifiable rubbish.

According to a report in THE NEW YORK TIMES, a television station in Richmond, Va., stopped showing the film, titled *Time to Ben*, after six minutes "because it offended all of the major advertisers."

NOTE: other case histories of films are on the following pages.

A NEW PICTURE about to be released by the Foster Parents Plan, Inc., will serve as a stark reminder of the physical and spiritual hunger that is still rampant in what seems to many of us "a world of plenty." It shows the plight of a young child growing up in a slum barrio of a large city in South America as typical of similar conditions to be found all over the world.

In some respects, as one watches the film, it might even be thought that the little child — Marisol — had done well, living on little more than scraps of garbage, for she has survived. Almost as many in her barrio will have died at her age as lived, through malnutrition and disease. She and her mother live in a tiny windowless room with never even a bath, never a doctor, never enough to eat, and much of that consumed by four kinds of intestinal parasites.

#### \$15 a Month Supports Child

Foster Parents Plan has been alleviating the sufferings of children and their parents forced to live in these dreadful conditions for many years. With only \$15 a month from people of good will in the United States, the Plan provides support for one foster child and family. It is an intensely personal plan, for the donator is providing for an actual child, and he receives letters and reports on the foster child's welfare.

The 27-minute color film, *Child of Darkness, Child of Light*, shows the contrast between Luz, a child Foster Parent benefits, and little Marisol, whose mother lives by selling cigarettes one-by-one in the streets, and who actually must compete with the vultures for edible leavings at the garbage dump.

#### Marisol Found on City Dump

It was at this dump, near a large South American city, that the photographic crew from producer, Wilding, Inc., found Marisol and her mother. She was chosen as a typical *Child of Darkness*.

(In a happy ending to the story of the filming, though not recorded in the film, Marisol now has a Foster Parent. In fact, so real and appealing was the need as evidenced by the scenes revealed by their cameras that several Wilding people have since become Foster Parents.)

In showing the life of Luz, the *Child of Light*, the film depicts how the plan operates, with emphasis on providing good medical care, food, clothing and schooling.

Marisol: a "Child of Darkness"

... who became a "Child of Light"

## Role of Foster Parents in Today's World

"Child of Darkness, Child of Light" Premieres in New York Shows How Foster Parents Plan Is Aiding World's Children

The aim of the Foster Parents Plan, the film concludes, is to destroy itself, for when there is no need, there will be no plan.

*Child of Darkness, Child of Light* was directed and photographed, with great compassion, by Bernard Hirschenson. It was produced by Edward Rasch, with Peter Yung as associate producer. Bernard Stone was editor, and the moving script was by Sheryl London. Distribution will be through libraries of Association Films, Inc.

Supervising the film for the Plan was Mrs. Len Soren, along with her colleague, Mrs. Mildred Stagg.

#### Sheryl London: Film's Writer

Sheryl London, whose heart-tugging script for *Child of Darkness, Child of Light* contributes so much to its appeal, is moving forward into her second successful career. Widely-known as a painter, her works have been exhibited in "one-woman" shows in several cities, and have been purchased by such art museums as that of Los Angeles.

Previous to this film, she also wrote eleven of the *Destination: The World* series of motion pictures for Alitalia Airlines. Strangely enough, although her husband, Mel London, produced and directed these films, it was not he who hired her. It happened that during the planning stages for the series she came up with so many good ideas that Alitalia officials urged her to put them on paper, and eventually into finished scripts. These were so fresh and lacking in the usual travel-film clichés that Alitalia accepted them with enthusiasm.

Films in the *Destination* . . . series have since won ten awards

at important international festivals, including a Gold Medal at Milan and a Silver Cup at Rome. One, *Europe from Dusk to Dawn*, was recently shown as an example of the best of modern industrial films at the Museum of Modern Art in New York.

Sheryl London believes that her training as a painter has been extremely valuable to her work as a film writer, for, as she explains it, the writing of scripts is much more importantly a visual process than merely the setting down of narration on paper, if the film is to really move and live.

Often she uses little sketches of her own as an indication of what the "left side of the script" should look like.

Along with husband Mel and camera crew, Mrs. London traveled all over the world for two years making the *Destination* series, and learned a great deal about the complete job of film-making in the process. Some time in the future she hopes to do a whole film, herself.

Portrait of Sheryl London, a creative and sensitive new talent.

Successful farmers who use Armour Vertagreen include New York's Max Shaul, on over half his 1200 acres he grows corn — makes every acre count.

## Farmers Are Star Salesmen in This Film

Armour Agricultural Chemical Company Salesmen Are Showing "The Vertagreen Story" and Winning Their Share of Markets

WITH FOOD PRODUCTION ONE of the world's most critical problems in these times, the task of selling farmers on the increased use of fertilizers is of primary importance. Armour Agricultural Chemical Company's salesmen are currently using a hard-punching new motion picture, *The Vertagreen Story*, to help maintain that leading supplier's share of this market.

With a long and distinguished history in plant food research and production, Armour and Vertagreen have few problems of identification among consumer audiences. In this picture, the sponsor has foregone artiness and subtle "soft-sell" to bring viewers a straight-from-the-shoulder message from businessman Armour to its farmer-customer, presenting succinct, strong "reasons-why" Vertagreen will make him more money.

"Farming is no longer just a way of life," the narrator declares, "it's a business — a business in

which industry joins forces with the farmer." Some of the ways in which these forces are joined formed the substance of *The Vertagreen Story*. Produced by Audio Productions, Inc. and directed by Hans Mandell, there is evidence of this producer's virtuoso command of "commercial" techniques to the purposes of this selling film.

For example, good use is made of the "case history" method in interviews with several farmer-customers on their home lots. Example:

"You know, they say Vertagreen's worth more because it does more. Well, I think they're right. My name's Max Shaul and I live here in Schoharie County in New York State. I farm about 1200 acres."

Narrator: "Max Shaul is about as successful as a farmer can be, and he should be — his farm management is tops. He plans wisely, runs things efficiently . . . works hard . . . and uses Vertagreen. As

the narrator describes this farm operation, the camera moves with him.

"On over half of his 1200 acres, Max grows corn . . . there are 275 acres in carrots . . . 135 acres in peas . . . 25 acres of beets . . ." A small but inspired touch that follows in these sequences gives evidence of the picture's effectiveness:

"15 acres of Max Shaul's land are pretty special — his children farm them all by themselves. They sell the produce at their own road stand and then divide up the profits, I like father, like son, and even daughter, they all use Vertagreen."

The good use of this "found" situation enhances the film's "sell" and no casting call for "all-American 4-H Club types" could have supplied more wholesome, healthy-looking examples of photogenic Young America than the real shots of Max Shaul's children at work on their own crops.

Sequences then present visual evidence of the far-flung facilities — mines, factories and laboratories — provided by Armour with its nitrogen plant at Cherokee, Alabama; phosphate mine and processing plant in Polk County, Florida; potash plant in Saskatchewan. These provide ample grist for director Mandell.

The Audio director's concentration on powerful machines, as much his "signature" as Alfred Hitchcock's bit parts, pays off handsomely in a series of "machines in motion" sequences. Building on this solid base of audience interest, the camera ranges through Armour laboratories and experimental greenhouses, following the development and testing

### 30-Minute Color Film Brings You American League Baseball Thrills

☆ The hot-stove league and any club or organization group in search of an entertaining big-league baseball film for winter meetings can get a new 30-minute color picture titled *The Name of the Game is Fun*, recently co-sponsored by the Chrysler Corporation and the American League.

Produced by Wilding, Inc., the film captures the nostalgia of those summer days and evenings as top teams such as the Baltimore Orioles step up to bat. From spring training to season highlights, the film covers every American League team in action.

Prints are available for free loan via nationwide libraries of Modern Talking Picture Service, Inc. •

In "The Vertagreen Story" farmers express enthusiasm for the product.

"They say that Vertagreen's worth more because it does more for them."

procedures which help bring Vertagreen to final phases of production.

A discussion of field services available to the farmer through Armour representatives is followed by scenes of prosperous users at work. Three of these farmer-customers testify in "candid" sequences to their personal esteem for the product.

*The Vertagreen Story*, according to J. Harry Varner, director of public relations for Armour Chemical Co., "has been enthusiastically received" by management, employee and field sales force groups.

### Buster Keaton in "The Scribe" Drives Home a Safety Message

☆ *The Scribe*, the last film ever made by Buster Keaton, uses his inimitable comic style to drive home a serious message for construction safety and accident prevention.

Keaton, wearing his famous flat fedora, his porkpie trademark, visits a big construction job as a "newspaper reporter" to do a story on construction safety. Although the scene is a construction site, the safety lessons apply equally to many other areas of industrial accident prevention.

The 16mm color film is available from Association Instructional Materials, a division of Association Films, 600 Madison Avenue, New York, on a rental basis. •

Among Armour Chemical Company's far-flung facilities pictured in sales film "The Vertagreen Story" is scene of its nitrogen plant at Cherokee, Ala.

## Sea-Safe America" Puts Safety in Pleasure Craft Designs

The best available marine research and engineering know-how now going into the design and construction of many American pleasure boats.

This is the message of a new 39-minute color film called *Sea-Safe America*, produced for the National Association of Engine and Boat Manufacturers by Victor Kaytetz Productions, of New York. Available on free loan to television stations, clubs and other organizations, the film takes the audience behind the scenes at the Coast Safety Bureau, and independent, public-service testing and a long laboratory serving the boating field only.

The Bureau tests a wide variety of boating products and labels them for public guidance if they meet applicable safety standards. All testing is done with reference to safe use only, and the Bureau's label is not a measure of commercial quality.

Part of the film covers the methods used to generate and develop boat safety standards, the only activity of the independent, public-service organization known as the American Boat and Yacht Council.

*Sea-Safe America* has become part of the NAEBM Water World series of films on boating. It is available from NAEBM at 1780 Broadway, New York 10019. •

\* \* \*

## Mecca Film Laboratories Expand into the Field of Color Processing

Mecca Film Laboratories of New York, a long-established, specialized source of black and white laboratory services, has expanded into the color printing and processing field, according to that company's executive vice-president, Jack Haber.

To offer these additional services Mecca now occupies the entire third floor of the Film Center Building at 630 Ninth Avenue in Manhattan. A custom-built 16mm color processing machine incorporating many new processing innovations and providing Eastman negative-positive color prints, is already in operation there. A 35mm color processing machine is being installed.

Mecca's announcement also notes that the newest type of additive color printers, contact and reduction are in use. The color lab is currently operating on a two-shift basis to meet expanded demand on its facilities. •

*"This other Eden, demi-paradise. . . This happy breed of men, this little world, This precious stone, set in the silver sea. This blessed plot, this earth, this realm. . ."*

EVEN SHAKESPEARE found it difficult to describe the almost mystical charm of Great Britain (in 25 words or less, as it were). He recognized, too, that for all its insularity Britain was so many-faceted that it refused to be categorized — literarily or any other way.

And lucky for us. Because whatever the annoyance to the historian-classifier or to the geographer trying to pigeonhole Great Britain here or there, once and for all, it would be cheap at twice the price for "this royal throne of kings, this sceptered isle, . . . this fortress, built by nature for herself against infection and the hand of war."

### Joins Company's Film Library

Some 350 years later, *Wings to Great Britain* — Pan American World Airways' latest addition to its library of travel films — comes to grips with the same problem: that of portraying Britain in all its splendor.

And if the passage of centuries may have dimmed somewhat the external glory and trappings of power that were concomitants of empire, the inside Britain, the Britain of pubs, and of moors and highlands and of magnificent woolens and of Mods and Rockers and of the richest literature the western world has ever known — this Britain remains as bright as the buttons on a Carnaby Street blazer and just about as hard to categorize.

All of which is by way of saying that *Wings to Great Britain* is that rarity among motion pictures — a really good film about Britain.

### Produced by Henry Strauss

Produced for Pan American by Henry Strauss & Co. of New York City, *Wings to Great Britain* continues in the tradition of Pan Am's "Wings" series. That is to say, it is not just a travel film about an interesting place but, rather, it is a film about people and where they live: a series film that is fun to see, full of the little insights and commentary that mark the difference between art and simple craftsmanship.

That *Wings to Great Britain* does absolutely nothing, in the meantime, to discourage a visit to London, or to the highlands or the

A lone rider on the Isle of Skye. The sea is never far away, wherever your travels take you along England's historic roads or in her bustling cities.

## The Many Facets of an Historic Britain

### Pan American Film Takes Viewers on "Wings to Great Britain"

Lake country, or to any of the famous British seaside resorts is almost incidental to what appears as the film's primary statement: here is a jolly lot and they live in a smashing wonderful place.

Directed and filmed by Henry Strauss, *Wings to Great Britain* documents at least five of the faces Britain turns toward the world.

First, there's the island Britain with all the richness and color attendant upon its long and intimate association with the sea. Second, there's the Britain that's held together by the delicate web of winding roads and gently flowing streams that lead into Devon and Yorkshire, lake country and moor, Scotland and Wales.

### Images of Literary Britain

Then there's literary Britain and the host of images and memories that are attached to Wiltshire and Stratford, Nottingham and Winchester, and all the old friends like Tom Brown, and Davy Copperfield, and Becky Sharp and Tom Jones and Robin Hood and even, "shrouded in the mist of time", a lad and a sword and a stone.

The Britain of history is also portrayed with Hastings and Runnymede and Salisbury plain and more bleeding castles than even the most avid amateur photographer could wish for. And, finally,

there is London itself with all the majesty of a thousand years of civilization, positively bursting with the traditions of a nation that for centuries spread its way of life throughout the entire world, a city that is monumentally impressive and yet at the same time as snug and as familiar as a neighborhood pub.

### A 25-Minute Vista of Color

Photographed in 16mm Ektachrome, the footage has been edited into 28 minutes of smoothly paced film. Brief, intimate, witty portraits of people and places are carefully combined with broader views of town and country, and the traditional pomp and ceremony associated with each becomes at once more human and meaningful.

The sound track, too, is a nice blend of "live" and recreated voice, music, and effects. Recorded partly on location, partly in studios in England, and partly in New York, the track does exactly what it should: each element contributes to the total effect; there is nothing that distracts. On this criterion alone both Henry Strauss and Pan American Airways can take pride in a truly distinguished addition to the shelf.

### Available at Pan Am Offices

*Wings to Great Britain* is available through Pan American sales offices throughout the country.

A colorful parade is part of everyday life in this Scottish town. The music of pipers underscores a leisurely visit with the Scots in this travel saga.

# Counter-Attack Against Our Polluted Air

Hazards of Invisible and Odorless Air-Borne Poisons Are Dramatically Shown in Film "With Each Breath" Sponsored by New York State Department of Health

**W**HEN YOU SEE THE SKYLINE through the haze, it's tempting to tell yourself the enemy will blow away.

"But it will take more than a breeze to chase this invader. It will take a plan, because the enemy has come to stay. In fact, he's sitting right beside you right now, grinning with each breath you take."

Opening with these warning words, a new film, *With Each Breath*, released by the New York State Department of Health goes on to document the growing problem of air pollution in the state brought to increasing attention after a three-day smog of almost dangerous intensity in November.

### Respiratory Diseases Double in Five Years

The 28½-minute color film is narrated by the well-known actor, Hume Cronyn. Produced by Harold Mantell, Inc. of New York, the picture points out that since most aerial poisons are invisible and odorless, a shift in the wind is enough to reassure the public about those particles that can be seen.

But physicians are not reassured by the rise in respiratory diseases in New York State and the nation. For the incidence of such disease has *doubled* in five years.

*With Each Breath* explains how polluted air not only corrodes lung tissue, but paint, metal, masonry and plant foliage in agricultural areas. It demonstrates that 6 per cent of all polluted air results from the faulty combustion of cars, trucks and buses, 40 per cent stems from stationary sources: chimneys, smoke stacks, and open fires. Some of these pollutants merely irritate, others are poisonous. Whether we live in the city, suburbs or country, we breath bad air.

What is New York State doing about it?

Governor Rockefeller explains how the new Clean Air Bill makes possible an unprecedented eight-point attack against air pollution in the state. It is a landmark in unifying federal, state and local action, by expanding search, planning and enforcement powers, controlling motor vehicle pollution, and providing adequate atmospheric warning systems.

### The Counter-Attack Has Now Been Launched

Air pollution won't feel at home much longer in New York State, the film concludes. The counter attack has begun. A new law and new determination can help us assure clean air and safe breathing for all our citizens.

Because of its quality and timeliness, *With Each Breath* was given a special premiere, Lincoln Center in New York by the State Department of Health in cooperation with the New York State Action for Clean Air Committee. ABC-TV covered the premiere and presented parts of the film in its newscast report of the event. Showings are now being held throughout New York state and the nation, has aroused the interest of the British Broadcasting Company for overseas telecasting early in 1967.

### How to Obtain a Print in New York State

Information about booking availability may be obtained from New York State Action for Clean Air at its two film depots, the Metropolitan Action for Clean Air Information Center at the Brooklyn Tuberculosis and Health Association, 293 Schermerhorn Street Brooklyn, or the New York State Air Pollution Control Board, 84 Holland Avenue, Albany. It is available for public service showings, television stations as well as for non-theatrical distribution to adult and school audiences.

Troubled by a persistent cough and breathing difficulties Frank Smith visits the chest disease clinic at St. Vincent's Hospital in New York.

Interviewed on his life history, Smith receives physical examination and a series of diagnostic tests in hospital's Cardiopulmonary Laboratory.

In this booth, Frank Smith inhales a mixture containing 50 parts per million of sulphur dioxide, a major air contaminant used in the tests.

The major objective of this test is to measure his airway resistance and ventilation changes.

This nitrogen washout test tells how much nitrogen remains in his lungs after 30 minutes.

Left: Tests confirm suspicion of Dr. Stephen Ayres, head of the Cardiopulmonary Laboratory at the hospital. Patient receives a broncho-dilator to help clear clogged air passages. His diagnosis shows he has chronic bronchitis.

Right: The most serious disease associated with air pollution is emphysema. The patient shown with Dr. Ayres retains as much as 50 per cent of inhaled air in his lungs after 30 seconds.

*New Directions* for modern railroading are illustrated by this film scene of "rack cars" set to move automobiles from the factory . . .

## NEW DIRECTIONS This Nation's Railroads

27-Minute Color Picture Presented by the Association of American Railroads

THE CASUAL BYSTANDER a freight train rolling across the countryside today might look much the same as it did ten years ago, twenty. And yet . . .

A time in history when miracles of science change belief and stagger the imagination, there is perhaps no more spectacular story of industrial ingenuity and technological development than the one the railroads can tell.

*New Directions in Modern Railroading*, a 27-minute color film just released by the Association of American Railroads, shows how railroads are winning new business and gaining old with "customerized service" and imaginative ideas for reshaping rail operations and services.

**The "Unit Train" and Auto "Rack Cars"**  
Typical of the new directions which railroads are taking is the growing shift from lugging goods in carload lots to whole trainloads — via the "unit train." Also emphasized is the dramatic development of rail "rack cars" for moving new motor vehicles from auto cities and the "piggybacking" of highway trucks and containers on rail flatcars.

Through such attractive new services, railroads have boosted freight traffic by 32 per cent since 1961 and turned one of America's stagnant businesses into a dynamic growth industry. Further highlights of the film show why "customerized" is the latest word for today's freight services:

### Other New Innovations Along the Rails

. . . A side-loading "all-door" freight car is proven to be a cost-saving innovation cutting valuable loading time for lumber shipments.

. . . A single pressure-controlled car — consisting of one "big bottle" — is replacing the practices of shipping individual containers of liquid hydrogen used in space exploration.

. . . A four-cars-in-one "super jumbo" hopper which has been designed under rail super-

### These "Pictures of the Mouth" Show New Trends on the Industrial Scene

vision to haul coal. The car has a capacity of 150 tons and is equipped with 16 doors that empty 17 tons in 15 seconds.

. . . Hot steel slabs weighing a total of 6,000 tons are shipped 500 miles on regular schedules to mill for rolling into finished steel.

### Fueling the Nation's Electric Utilities

. . . Unit train-loads of coal, running 351 days a year and shuttling 600 miles every 48 hours between mine and generating station, help to fuel the nation's electric utility industry

Coal unit trains help speed this vital material from mines to users in another dramatic scene of "New Directions" on U.S. railroads.

and enable "King Coal" to compete with nuclear fuels.

. . . Aerated cars handle dry bulk materials ranging from white flour to carbon black. Equipped with pneumatic loading and discharging mechanisms, these center flow hoppers speedily "inhale" cargo at plant and exhale" at destination.

"It's been said that we Americans today live out of the freight car," concludes the AAR film. "For preeminently, it's our railroads that bring the products of range, field, garden and orchard to wholesale markets."

### Explore New Ways to Handle Passengers

Turning to the needs of communities where traffic jams threaten the very existence of city life, the film shows how new directions in passenger transportation are being explored and developed by the railroads in partnership with the communities.

### New Directions . . . was produced and directed for the Association by Robert Yarnall

Richie of New York, and was photographed over the past year at railroad locations throughout the United States. Narration is by Chet Huntley; distribution by Modern Talking Picture Service.

Other "case histories" of recent and useful new sponsored films appear on pages 34, 35 and following pages of this issue of BUSINESS SCREENS where these reports are featured.

Worthington's balanced-opposed compressor concept is explained through the use of these abstract three-dimensional forms in the film.

## Image of a Problem-Solver

Worthington Shows Compressor Concepts With Three-Dimensional Abstract Forms

THE WORTHINGTON CORPORATION'S new and untitled motion picture is designed to be shown to potential customers for its line of compressors. The film will be shown in the field by Worthington representatives who will follow it up with a thorough technical discussion of the features and capabilities of the Worthington balanced-opposed compressor design. The objective of the film is to create a favorable overall image of Worthington's modern approach to compressor design and customer service.

To reduce the complex technical concepts into simple, graphic terms, basic three-dimensional geometric shapes which are moved about into various inter-relationships to describe Worthington's balanced-opposed compressor concept are used. Other aspects of Worthington's story are also shown by means of these abstract colorful shapes . . . the people of Worthington all over the world, and the computer as an aid in problem solving.

Pelican Films' Paul Harvey, the designer and director of the film, has used these three-dimensional wooden shapes in a limbo setting, and designed a variety of models which could be stacked, fit into one another, turned around and flipped, in order to tell the Worthington story in an interesting and unusual manner.

Some of the blocks have actual photos, in color and black and white, of machinery on one or more of its faces. Other blocks have numerical symbols and still others are just color. A pair of human hands arranges and rearranges these shapes, draws flow-pen lines between the shapes and carries the story along to its conclusion that Worthington is the company concerned with finding the shortest distance between a problem and its solution.

Lawrence Ravitz scripted the film for Pelican. An unusual music/sound effects score was composed by Michael Small.

Worthington Corp.: a company that is concerned with finding the shortest distance between a problem and its solution. . . (scene in the film).

Training film activities have gained new flexibility at all company locations through the adoption of the 35mm sound film medium. Here, safety director Lou Holscher uses 35mm rear-screen projector to present a training film.

## Film's Role in Public Relations Program and Training at the Weyerhaeuser Company

IN THE FALL of 1940, a national magazine article set off an alarm which has kept some key management men in Tacoma, Washington, on the alert ever since.

The people involved run one of the world's largest forest products firms, the Weyerhaeuser Company.

The magazine article which implanted the long-enduring lesson was written by Harold Ickes, former Secretary of the Interior. It accused the nation's timber companies of depleting and desecrating our national resources.

For its key illustration, the article used a picture of a hillside which Weyerhaeuser's loggers had just completely denuded of a virgin stand of Douglas fir trees.

"The heartbreak of the situation was that we weren't guilty. The

Weyerhaeuser films stress the versatility of forest products. Here, the cameraman documents the use of materials derived from trees and needed in a surgical operation.

only error we had committed was in failing to make our story known," explained B. L. Orell, vice president of public affairs.

"Years before the article was published, Weyerhaeuser had established a comprehensive program for reforestation of our timberlands. What really irritated the knowledgeable reader was that the very slope pictured in the article had already been reseeded before the magazine was published," Orell continued.

"There's an outstanding growth of timber on that same slope today," he said, producing a series of pictures to prove his point (see illustrations). "But it takes up to 60 years — depending on the type of tree — to develop a new crop of trees which is ready to harvest. Public relations problems, unfortunately, can sprout a lot faster."

### "Tree Farming" a Key Phrase

Almost immediately after the unfortunate experience in 1940, Weyerhaeuser moved to develop a program aimed at bringing the real facts of its position before the public. One of the most immediate by-products was a simplified explanation of the process of timber production and reforestation. The term, "Tree Farming," has been an industry standard ever since. A realistic, image-building information program has been maintained and expanded continuously by Weyerhaeuser since the end of World War II.

The problem," according to

Orell, "has been that erroneous impressions are far easier to create than to correct. Even though we felt we had been wrongly accused on many occasions, trying to refute charges against us was not the whole answer. We needed a positive program aimed at acquainting the general public with the facts concerning the country's forests."

### What the Public Should Know

From an information standpoint, the message to be delivered was pretty straightforward:

1. Forest products are a necessity of life for modern America. Their value transcends the awareness of many people. For example, though most people associate wood with paper, few realize that modern plastics and fibers are wood derivatives. Clearly, an important first step for Weyerhaeuser's information program had to be to make people aware of just how dependent they are on wood products.

2. People had to be made aware that companies like Weyerhaeuser were not anxious to put themselves out of business. It had to be made clear that forest products companies are fully aware of the obvious fact that they can't go on cutting trees indefinitely without replacing those they use. In other words, the idea was to show that tree farming is good sense, and sound business practice as well.

3. Once these points were established, Weyerhaeuser executives wanted to acquaint people with the fact that considerable research and effort was being expended to assure a continuing supply of timber for future Americans.

### Films Have an Important Role

A full-media campaign has supported this program continually for more than 20 years. Its elements have included publicity, institutional space advertising; the publication of special educational pamphlets, illustrations and test materials, and audio-visual support. Among other results of its continuing need, Weyerhaeuser has become a substantial user of motion picture films as a mass information medium.

"Where you're dealing with nature and wildlife, people respond to situations emotionally," Orell explained. "To be convinced, they need experience which reaches them at the emotional level.

"You can achieve this particularly well with motion pictures. This is the best medium to establish an identity in the mind of your

James D. Norby, supervisor of visual information at Weyerhaeuser Co. reviews Audience Certification report from Modern Company's public relations film, "Tomorrow's Trees" has been seen by 6 million people.

audience with the grandeur of nature which is their real concern. Realistic motion pictures are also the best way to show the general public that you are on their side — that you are acting in good faith."

### Good Picture Has a Long Life

The outstanding specific example of Weyerhaeuser's positive public relations achievement through motion pictures lies with a film titled *Tomorrow's Trees*. This 28-minute motion picture was completed in 1959 for Weyerhaeuser by Wilding Inc. Shot in 35mm Eastman color, the picture was an all-out effort. It was budgeted at the time at \$100,000.

An even more impressive figure lies in the film's viewership. More than 6,000,000 persons have seen *Tomorrow's Trees*. Just as important, audience analyses indicate that the great majority have understood and responded to its message.

Using Seattle film producer (Raymond) the company makes film on printing operations. Value of forest products is evident in printing industry. user of paper-derived from wood.

**More Than Six Million Viewers Have Seen Weyerhaeuser's 3-Minute Public Relations Picture "Tomorrow's Trees"**

The erroneous ideas existed previously, the rate of attitude reshaping has been highly impressive. Also significant has been the audience interest, as recorded in screening and attendance figures, has maintained a high level. In 1965, six years after its release, *Tomorrow's Trees* played before 640,000 persons.

**Cost-Per-Viewer Is Very Low**

"When you are after this type of distribution, you need a first class product," says Orell. "With audiences running into the millions, the per-viewer cost of taking a little trouble with your original product, or of supplying fresh reprints, becomes insignificant. We have set major public relations objectives for our films. There is no choice but to budget accordingly."

*Tomorrow's Trees*, like other public relations films produced previously by Weyerhaeuser, has been distributed by the Modern Talking Picture Company. Present production and distribution budgets run from \$30,000 to \$35,000. They have been as high as \$100,000.

**Contracts, Holds the Audience**

A large measure of the success of the film lies in the fact that it attracts — and holds — audience attention through the common denominator of the natural beauty of forests.

To achieve the outstanding visual impact for both the opening and continuity passages of the film, production started with the assignment of a skilled camera crew to cover the timber areas being worked by Weyerhaeuser as early as possible. General subject areas were outlined for this first field trip.

But there was no tight script. Rather, the idea was to come back with eye-catching footage. Once it was in hand, the film was rigid and the entire production went out on location to shoot the final copy.

**Key Sequences in the Picture**

Understandably, the film opens with a beautiful stand of Douglas fir which is, clearly, anything but dead and destroyed. The camera follows a log truck out of the woods to a lumber mill.

From there, Weyerhaeuser faces the problem squarely. The scene shifts to a bare hillside where a stand of Douglas fir trees has just been cut. The process of reforesta-

tion is covered from both the natural and man-controlled viewpoints. Played against backgrounds of nature at work, some telling evidence is presented on behalf of tree farming. For example:

It is pointed out that, under normal conditions, seed crops produced in natural forests are insufficient for reseeded in seven years out of each 10. The film makes its point convincingly by showing high school youngsters and others helping to store up supplies of seeds during bumper crop years.

• A field mouse weighing just a few ounces is shown nibbling at seed pods while the narrator informs the audience that a single animal can consume up to 50,000 seeds annually. This sets the stage for a description of how modern forest products companies treat their stored seeds, coating them with a material which repels rodents without destroying germinal qualities.

Other scenes show how helicopters are now used to reseed uniformly, doing a more thorough job than nature's normal, hit-or-miss methods. Also shown is the spraying of new tree crops to kill off weeds which choke out the seedlings. Scientific thinning and management of tree crops is also demonstrated.

Through this process, the film takes the viewer from the barren hillside back through new, emerging forests. The culminating message lies in establishing that the best interests of the public and the forest products industry really do coincide.

**Survey Proves It Effective**

The effectiveness with which this message is delivered was testified to by a recent survey conducted for Modern Talking Picture Service by Eugene Gilbert and Company, public opinion researchers. The survey was made among school children, who now make up about 75 per cent of the audiences for *Tomorrow's Trees*. Key attitude-indicating questions were asked of sampled groups before the film was shown, immediately after viewing and 30 days later.

On a number of key points, the survey demonstrated a dramatic shift of opinion among viewers. For example, before seeing the film 31 per cent of the students felt (CONTINUED ON NEXT PAGE)

The 1940 publication of this picture by a leading magazine established the need for a comprehensive public relations program to show the public the tree farming activities of the Weyerhaeuser Company. The picture showed a hillside recently cleared of Douglas Fir by a logging crew which occupied the cabins in the foreground. A reseeded program was already under way when the picture was published — but this important fact was not disclosed.

Here's the same hillside, photographed again in 1950. Scientific tree farming had already gone a long way toward reforesting the area pictured in scene. And, by 1965, the towering new growth of Douglas Fir is dwarfing the cabins of the loggers who had cut the previous generation of trees in the area.

## How Films Serve the Weyerhaeuser Company:

(CONTINUED FROM PAGE 39) the timber industry was destroying our forests. Immediately after the screening, this percentage dropped to seven. A month later, the percentage was 49, indicating that half of the gain represented a permanent audience impression. In another dramatic instance, before the film was shown only 15 per cent of the audience felt animals were a natural enemy of trees. Immediately after screening, this percentage jumped to 66. A month later it was still at 45.

"This survey substantiated fully some deductions which we had already made on the basis of circulation figures," Orell said.

### Repeat Requests from Schools

He pointed out that the educational validity of the film had been pretty well established by the continually increasing number of requests received from schools. Circulation data indicated that a number of repeats were being received from schools which had already shown the film and wished to use it for additional classes. Actually, a large measure of the success of the film has been due to acceptance in schools. When *Tomorrow's Trees* was produced, it was estimated that its circulation would be 60 per cent to adult groups. By 1965, the higher-than-anticipated usage was being accounted for through a 75 per cent circulation among schools.

This circulation mix fits in well with Weyerhaeuser's objectives. The purpose of the program is to

Photo librarian Frank Villacusa at his Tacoma headquarters handles circulation of all materials, including few prints of "Tomorrow's Trees" retained to meet requests. He's checking print inventory to verify availability of the p.a. film.

influence the family audiences which take a strong interest in natural resources. Such groups are effectively reached through youngsters — who form a primary focus for interest in outdoor activities.

### Takes a "Long Range" View

"Furthermore," Orell explains, "in our industry our viewpoint is necessarily long range. We can afford to concentrate on tomorrow's adults. After all, a generation of humans grows to adulthood in 20 years, whereas a stand of Douglas fir takes 60 to 80 years to mature."

### Quality Standards Also Guide Weyerhaeuser Training Films

THE SAME PRINCIPLE of concentration on quality which had

guided the production of public relations film has also been applied to internal motion picture media at Weyerhaeuser Company.

To illustrate, Lou Hoelscher, safety director of Weyerhaeuser, pointed to a film for safety training of chokermen, which is now in general circulation.

Chokermen, Hoelscher explained, are the people who attach chains to logs which are to be hoisted onto trucks by cranes. They tend to be the newer employees in the woods. Therefore, their safety training was pinpointed by Hoelscher as a critical place to begin a filmed training program.

### Form Industry Film Group

To accomplish the set objectives effectively, it was determined that it would cost \$15,000 for an 11-minute film produced on location in the forests. To spread the

costs realistically, Weyerhaeuser helped lead the way in forming a cooperative group of nine forest firms who comprise the Northwest Forest Industry Film Committee. Producer Max Rarig, of Seattle, was a prime mover in this effort and his company made *The Chokerman*, prize-winning safety film.

The film covers universal logging practices without identifying any of the sponsors. In this way,

the costs can be cushioned for each user. Through this approach, it has become feasible to schedule production of seven additional safety films in the near future.

The primary release medium for the safety film will be 8mm magnetic sound. This will make it possible to adapt training and indoctrination programs to individual, local needs within Weyerhaeuser's far-flung operations.

Good use of collateral material helped promote "The Trials of Little Nell" to midwestern farm groups. Shown here are (1) the theatrical type poster; (2) six-page dealer folder for presentation; and (3) a dealer mailing card.

### Well-Promoted Slidefilm Has Key Role in Farm Product Sales

AN EFFECTIVE SLIDEFILM can play a key role in a manufacturer's marketing program. And it can also win honors on its own in communications' competition. That dual purpose was achieved by a 14-minute sound and color filmstrip created in cartoon format by Cal Dunn Studios, Chicago, for Elanco Products Company through that firm's agency, Gardner Advertising Company.

Text for the subject was written by Elmer Dapron of Gardner's St. Louis office. In melodramatic fashion, *The Trials of Little Nell or Will Tylan Save the Farm?*, did its job at farmer meetings held through last fall and winter months in the midwestern hog belt. It promotes Tylan, an antibiotic feed additive.

In true "mello" format, the filmstrip features the traditional trio: the beautiful girl about to lose the farm, the handsome hero with muscles and a heart of gold and, of course, the mustached, mortgage-holding villain. For obvious reasons, a Tylan-nourished hog is the real hero. He wins the

prize money and saves both the farm and little Nell.

It won a bit more than that for the 14-minute subject also took a silver medal in the public relations category at the recent 6th annual International Film and TV Festival of New York, shared by Cal Dunn Studios and the Gardner Agency. Art direction was by Bob O'Reilly of the Dunn staff.

## Discuss Sales Techniques at Los Angeles

Government, Business Leaders Share Ideas on Improving Profits

TWO WELL-ATTENDED SESSIONS on the general theme of sales techniques highlighted the fall program of the Los Angeles Chapter. Ways and means of increasing business through utilization of government agencies and their specialized data were the subject of an October panel discussion at which Jud White, U. S. Small Business Administration; John Russo, representing the Market Development Committee of the Los Angeles Chamber of Commerce; Jack Rokahr, Foreign Trade Section, U. S. Dept. of Commerce; and Claire Grimes of the Hollywood Chamber of Commerce participated.

Moderated by Julian Fly

This lively panel discussion was moderated by the well-known documentary filmmaker and IIPA member, Julian Fly. It was followed by a Sales and Public Relations Clinic program in November which featured two stimulating presentations by Mr. Russo (also a partner in Rocket Pictures) and by Frank Ferrari, director of labor relations for the National Cash Register Company.

Both of these speakers have outstanding reputations in the field of training techniques and their talks brought a lively response from attending members. This session attracted some prominent guests, including the Rev. Bob Richards, noted television personality and two-time Olympic cham-

panion; Charles "Cap" Palmer, Parthenon Pictures' executive producer; and Criswell, the well-known television prognosticator.

Frank Ferrari stressed the importance of words in selling an idea or product and values reflected in many facets of attitudes revealed in actions, voice and personality in dealing with clients. He has lectured widely on this subject before sales organizations and college groups.

Russo Presents Training Series

John Russo presented excerpts from the outstanding *University of Marketing* sales training program created for his company by Methods and Motivation, Inc. Introducing five of the eleven basic "closings" for sales presentations, he noted, "there has been a subtle change in the philosophy of selling today. In the old days, it was an accepted fact that if you could find a *need* people had and could develop a product or service to fit that need, you were in.

"Today, this doesn't work too well. The philosophy today is that don't go in and tell people that they *need* something, because we're not a 'needy' society today. We don't need you, we don't need your company, we don't need your product. But we buy things, we do things, because we *want* to.

"So, in the present philosophy of selling," he concluded, "we *cause* people to *want* what we have to sell. And this is the way

"Criswell Predicts" as a special program event of the Los Angeles Chapter's December meeting at which he gave dinner guests examples of his t.v. art.

we get them to buy what they really need. We *motivate* them to *want* things.

These stimulating and very rewarding evening programs have brought an enthusiastic response from those who attended. Their requests for "more of the same" will be closely followed in subsequent program planning.

\* \* \*

### Northern California Members to Reno for Their December Meeting

☆ Howling mountain winds and drifting snow that blocked the mountain passes into Reno, Nevada last month caused a week's postponement of the December meeting of the Northern California Chapter in that city.

But it got under way, a bit late but very stimulating, as members toured the facilities of the University of Nevada, including its Atmospherium-Planetarium. The regular meeting was then held at the Press Club.

Three films were featured at the Reno meeting. One was a "home movie" by noted Hollywood cinematographer James Wong Howe about his friend, the noted painter Doug Kingman. Footage from a picture on the story of aviation now in production by Warren Curtis was followed by a compilation

of 1966 Award Winners at the American TV Commercials festival.

\* \* \*

### Douglas Aircraft's Film Unit in Larger Quarters at Santa Monica

☆ In mid-December, three guiding lights of the Douglas Aircraft film unit (Bill Gibson, Jack Gabrielson and Vern Barry) saw their year of planning and long-time hopes fulfilled when they occupied new and larger quarters at 2525 Ocean Park Boulevard in Santa Monica. Previous facilities which confined them to 3,000 square-feet have now been tripled to an 11,000 sq. ft. area and a new sound stage has been added.

This 36 x 46 x 18 foot stage will house several standing sets; the large DC plane mockups used by major studios for theatrical films. There is now adequate working space for the film unit which turned out 44 three-reel films and more than 400 "shorties" last year. The Douglas facilities include a new theater, sound and mixing equipment and a modern closed-circuit television setup.

IIPA members will enjoy an "open house" tour of the new facilities as soon as the Douglas unit is firmly squared away in their new home. We'll be anxiously awaiting the word, Bill.

Vern Vihlene introduces guest speaker Frank Ferrari to IIPA members and guests attending Los Angeles Chapter meeting at Cafe de Paris in December.

John Russo (standing at left) presented "Closing a Sale" sequences from the "University of Marketing" series created by his company, Rocket Pictures.

"**ACCENTUATE THE POSITIVE** eliminate the negative. This positive philosophy can be applied to motion picture production, particularly 16mm.

Normal procedure in 35mm is to shoot on negative film, make a master positive (B&W) or an intermediate positive (color), then through a dupe negative (B&W) or an intermediate negative (color) stage to the final release prints. Release prints are made from an unspliced printing negative, thus protecting the original negative from wear. Finished prints have an emulsion position toward the light source—the standard 35mm emulsion position. While all this is normal procedure, it may not necessarily be the best.

Now let's look at 16mm procedures. If we shoot 16mm negative and go through the same steps as 35mm, we end up with an emulsion position again toward the light source, which for 16mm is not the standard position, but is non-standard. What difference does emulsion position make? Sound optics on 16mm projectors are in focus only if the emulsion position is toward the screen. Very few projectors enable the operator to change the sound focus from one emulsion position to the other.

If we shoot 16mm reversal and make a printing internegative (B&W or color), the emulsion position of the release print is then standard 16mm position—toward the screen. The sound optics are in focus, and we have eliminated one of the printing steps. Instead of a third generation duplicate on the screen, we have a second generation one.

There are many other advantages to shooting 16mm reversal. Instead of objectionable white marks on the screen, caused by small particles of dust, abrasions or scratches on the negative, we now have black marks which are difficult to see. Reversal emulsions are less susceptible to scratches and pressure marks than the soft negative emulsions. Printed effects from positive A&B rolls look better. A positive image is much easier to evaluate for timing purposes. Out-takes on reversal can be screened immediately for checking camera, lighting and exposure. If the cut original is in a single printing roll, then of course we have printed in splices. The

lapped-over edge of a splice made on reversal appears as a thin black line on the screen. With negative it would be an objectionable wider white line. Also many TV stations tell us they prefer a print emulsion position toward the screen. It affords smoother projection and a steadier image.

If I were a producer today, shooting for 16mm release, I would never shoot 35mm. I would use only 16mm Ektachrome Commercial (7255). I would shoot all title overlays on Ektachrome MS. For cutting I could choose black and white reversal workprint (*daily*). However, color imperfections, such as camera flares in the original, are difficult to see in black and white dailies, but are readily discernable in color, so a Kodachrome or Ektachrome daily is preferred. The original would be prepared in A&B rolls by the checkerboard technique to avoid seeing splices on the screen. I would make a first trial composite print (*sound answer print*) on Kodachrome if the show is in color. After the answer print is okayed, I would order a black and white or color internegative. Incidentally, you cannot make satisfactory black and white prints from a color internegative because the positive release stock is color blind.

Our sound track for final release would be re-recorded from magnetic to an A wind negative track. It is true that this is the wrong wind track for the reversal answer print, so if you want the best sound for this print, a B wind negative track would also have to be made. While it is possible to print the reversal answer print from the A wind track, the sound image would have to be printed through the base because the two emulsions would not be in direct contact. In this instance there would be some loss of high frequencies.

If all of these advantages exist in shooting reversal for 16mm, why not for 35mm? Shouldn't the industry have available 35mm reversal color such as Ektachrome Commercial? Some cameramen may think that a tungsten ASA speed of 25 is not adequate, but the ingenuity of the film manufacturers will overcome this.

So for today, at least in 16mm let's eliminate the negative—tomorrow maybe in 35mm.

THE INDUSTRY FILM PRODUCERS JOURNAL

Post-Festival Award Winners Are  
Featured at San Francisco Event

☆ The Northern Chapter followed up its activity at the San Francisco International Film Festival with a late fall program attended by Karon Murao, Japanese film producer and one of the finalist judges at the Festival.

Members also had the pleasure of screening four prize-winners from this event, two Silver Award winners, *Language of the Bee* and *Sweets of Japan*; the Golden Gate Award winner, *Memorandum*; and *Flight of Birds*, an honorable mention recipient. The Chapter's secretary, Bess Brady, summed up audience reaction when she commented, "Two of these films made most of us want to give up and become service station attendants. *Sweets of Japan* was a marvelous example of how a process film can be esthetically pleasing as well as informative. *Memorandum* was pure documentary, a shock-type film that was well presented and well-narrated."

San Francisco film producer Tom Fraser (Fraser Productions) received member congratulations on the news that his picture, *The Film Film*, was awarded a Gold Medal as the best sales presentation film at the International Film & TV Festival of New York. •

Your Contributions to "Journal"  
Pages Welcomed by the Editors

These columns provide an open forum of news and features that serve both members and friends in the industry film producer's field of interest.

Got a story about a new technique or new picture? Or a case history of how audiovisuals got results for your company and its customer? Put it down and get it in the mail to the Editor of these JOURNAL pages or direct to BUSINESS SCREEN's office. •

Air Force Honors John Cannavan  
for Exceptional Civilian Service

☆ The Exceptional Civilian Service Award, highest honor presented to a civilian by the Air Force, has been presented to John W. Cannavan, motion picture producer for the 1365th Photographic Squadron, Orlando AFB, Florida. It was only the second time in 14 years this award has been given at Orlando AFB.

The 1365th Photographic Squadron is a subordinate unit of the Military Airlift Command's Aerospace Audio-Visual Service. AAVS is the Air Force's single manager for photographic and videographic products and services worldwide.

A Report to the Congress

Cannavan was cited for his outstanding film work during the period September, 1964 to March, 1966. In 1964, Air Force Chief of Staff General J. P. McConnell decided that the Air Force posture statement, an annual presentation before the Armed Services and Appropriations Committees of Congress, would be presented as a motion picture. This report ranks among the most important activities engaged in each year by the Chief of Staff and the Secretary of the Air Force.

Assigned as producer of the film, Cannavan was responsible for coordinating the all AAVS resources and determining the best presentation techniques. Working under pressure of time and the necessity of gaining approval of the Secretary of the Air Force, the Chief of Staff and other high-ranking officials, he worked many hours in excess of expectations. General McConnell personally thanked him for his "outstanding effort which resulted in a major contribution to the year's highly-successful presentation."

Another Presentation in '65

As a result of the success, the Chief of Staff decided to use a visual presentation for the 1965 report to the Congress and Cannavan was again chosen as its producer.

"Indian River", a joint tactical exercise conducted at Elgin AFB, Florida and Ft. Campbell, Kentucky in 1964, was also filmed in its entirety under the direction of John Cannavan. He developed means for providing quick development and editing of footage so that Air Force and Army commanders could see activities shortly after they took place. The film

Exceptional Civilian Service Award is pinned on John W. Cannavan, motion picture producer of the 1365th Photographic Squadron, by Colonel William S. Barksdale, commander of the Aerospace Audio-Visual Service.

aided both services in determining new operational techniques.

Criteria Sound Recording Studio  
Enlarges North Miami Facilities

☆ North Miami, Florida, home of Studio City and a key center of film and television production in the Southeast, has a growing neighbor. Criteria Recording Studios, Inc., with one of the largest and most complete sound studios south of Manhattan, opened new facilities on December 28.

According to Criteria's president, Mac Emerman, the firm has more than tripled its capacity in this area with the opening of two new studios. Studio A is large enough to handle a full symphony orchestra, with as many as 32 microphones feeding up to eight tracks. Scoring, dubbing, editing and disc cutting facilities are now complete.

Studio C, the smaller of the added facilities, will be used for dialog and demonstration recordings.

\* \* \*

Communicators Unlimited Offers  
Creative Facilities in Chicago

☆ A new company, Communicators Unlimited, has opened headquarters at 777 N. Michigan Avenue in Chicago. Headed by James R. Phelan, the firm will specialize in a wide range of business communications, including the preparation of sound slidefilm presentations, meetings, skits, convention talks and public relations media.

Phelan is the former editor of BAKERS WEEKLY and, most recently, the director of public relations for the American Bakers Association in Chicago.

This slide presentation speaks for itself.

Attention of dentists and laboratory technicians attending a professional clinic at Jelenko's New Rochelle, N. Y. headquarters is directed toward a television monitor (upper left) by I. F. Wetterstrom, head of educational dept.

## A-V Takes New Techniques to the Dentist

Videotapes Help Instruct Dentists and Lab Technicians at Professional Clinics Held at Jelenko and Co. Headquarters

**V**IDEOTAPE RECORDING, television's familiar "instant replay," has been adopted for a variety of training uses by J. F. Jelenko & Co., one of the world's largest producers of precious metal alloys and related equipment for the dental profession.

Dentists and lab technicians attend regularly scheduled professional clinics at Jelenko's New Rochelle, N. Y. headquarters to keep abreast of latest developments in the swiftly changing field of dentistry. During these clinics, they are given detailed instruction in mixing, firing and soldering techniques

pertaining to porcelain-to-gold application; crown, bridge and inlay work, as well as the use of Jelenko equipment and materials.

### Demonstrations Are Taped

Newest addition to the training department of the 53-year-old firm is an Ampex videotape recorder, which records lectures and demonstrations on magnetic tape for immediate replay and for later and repeated viewing.

Videotape recording will play a valuable role in the instruction program when it becomes fully incorporated into the Jelenko schedule, according to Arnold Aaron, the

Demonstration of a new line of dental models is being recorded on an Ampex videotape recorder by company's purchasing director Arnold Aaron (at left).

## PRactical APPLICATION OF VIDEOTAPE IN INDUSTRY

company's purchasing agent.

"Videotape recording allows our staff to devote more time to individualized instruction," said Aaron. "While the video tape of a particular demonstration is being run, the instructor can walk among the class and give more detailed attention to those who need it.

"Another valuable feature of videotape recording is that the instructor may stop the tape, thus freezing the picture, to show a particularly difficult portion of the technique being demonstrated."

### Tapes Also Used by Salesmen

The company's plans for videotape recording go far beyond the home-based training program. Video tapes produced by the education staff will be available for use by the 30 Jelenko salesmen located throughout the country. The salesmen, all technically oriented, will be able to give classes and clinics in the field to prospective users. Tapes made on the company's VR-7000 recorder can be played back on any other VR-7000 or VR-6000 series Ampex recorder.

Thus, as new techniques are de-

veloped, they can be recorded on video tape and sent to the salesman in the field for his benefit and for showing to dentists and lab personnel.

### Why Jelenko Uses Medium

Videotape techniques were selected as training aids for a number of reasons, according to Aaron.

"Prime among them is the instant playback capability," Aaron said. Sound motion pictures can be recorded on video tape and played back on a television monitor without processing. Because of this, Jelenko personnel can determine immediately if their taped lesson is just right. If not, the tape can be erased and the lesson restaged until it is perfect.

### No Special Training Need

"Also, videotape enables us to use standard lighting rather than go to sensitive lighting techniques for photographing our various operations," Aaron said. "And the fact that video tapes can be used in our own laboratories with no special training for our personnel is another major factor in the selection of videotape recording." •

## How Videotapes Serve Business & Industry

**B**USINESS APPLICATIONS of portable videotape recording equipment show considerable latitude. Here are brief notes on how this tool is being used across the country:

- New salesmen are trained and seasoned veterans improve their technique at the Pitman-Moore division of Dow Chemical Co. in Indianapolis by seeing themselves in action as the customers see them.
- Impact International, Inc., a Chicago convention service, provides highlights of each day's activities, social gatherings and interviews with key speakers. These videotapes are transmitted to t.v. receivers in delegates' rooms as a morning "wake-up" show.

### Show Food Service Pointers

- Franchise managers are taught courtesy, cleanliness and speed as well as other facets of chain restaurant management at the Burger Chef Systems' training school in Indianapolis.
- The General Electric Company plant at Hickory, N. C. uses an Ampex VR-7000 for methods analysis, operator training and employee communication.

- Oil drilling installations on the floor of the Pacific Ocean are inspected by a television camera and recorded on videotape by Standard Oil of California.

- Information from tests of electric propulsion engines, conducted for the Air Force, is recorded on videotape by Electro-Optical Systems, Pasadena, Calif.

### Lessons on Machine Repair

- Machinists at Harron, Rickard & McCone, San Francisco distributor and rebuilder of heavy industrial machinery, see how equipment is repaired on company-produced videotapes.
- Scientists and engineers at TRW Systems Group use videotape recorders to aid their communications with various company facilities throughout the country.

### Plant Tours by Videotape

- Tours of remote plant locations are offered visitors via videotape recording by the public relations department of Olivetti-Underwood Corp., Hartford, Conn.

The list of applications grows and will be supplemented in this ahead as the editors turn to medicine, science, and other fields. •

# the case against high shipping costs.

Plio-Magic film cases cut your shipping costs by as much as 65%. New, improved Plio-Magic material makes them even more durable, lighter in weight than ever before. And you get moisture and dust-resistant protection without the need for cans. Result: a saving of as much as three pounds per shipment.

What's more, these attractive cases can't rust, crimp, bend, chip or discolor. And there's a new gentle action to the exclusive Plio-Magic Positive Locking System. Just a twist of the wrist eliminates unwieldy belts and buckles forever.

Plio-Magic cases are supplied in 1, 2, 3, and 4-reel sizes for 1600 foot reels; 1 and 2 reel sizes for 1200 foot and 2000 foot reels; and in 1-reel size for 400, 600 and 800 foot reels.

Available in a wide range of colors, with custom imprinting, if desired.

Write today to Dept. BS-12, 612 Boulevard East, Weehawken, N.J., for money-saving PRC data kit.

Color Service Company's new laboratory building at 343 West 54th Street in New York City is one of the industry's most modern plants.

**T**HE FILM INDUSTRY'S overburdened color laboratory situation was considerably brightened last month by the opening of new and much enlarged facilities in New York by Color Service Company, one of the leaders in motion picture color printing and processing for the past twenty years.

Color processing demands on all laboratories have quadrupled during the past two years because of the sudden switch to color by the television commercial industry, and also because of the greatly increased use of Federally-subsidized educational films in color by schools. Meanwhile, industrial films are turning more and more to color, and print orders to meet the requirements of growing 16mm audiences have continued to climb.

**Completely New Lab Built in 18 Months**

Color Service Company, alert to the burgeoning demands of the industry, started building the new laboratory at 343 West 54th Street, a year and a half ago. Expansion at the com-

**COLOR SERVICE OPENS MODEL LAB FACILITY**

**\$2 Million Laboratory Doubles Capacity At a Time When Industry Needs It Most**

pany's old location, 115 West 45th Street, had almost burst the walls, and it was recognized that only a completely new lab would provide the facilities the company needed.

The new two-million dollar lab is expected to more than double Color Service's capacity. It was built to meet exacting technological requirements; printing and processing activities are all conducted on one floor so that film literally comes in one door, progresses in sequence from room to adjacent room, and is finally delivered from another door at the end of the line; a lab man's dream of perfect film flow. Printing and processing equipment is largely new and the most modern available anywhere in the world, including Hazeltine Color Analysers.

**Exact Control of Temperature, Humidity**

The lab is air-conditioned on a modular basis and is fully automatic so that exact temperature and humidity requirements of each step are maintained at all times. Walls are of ceramic tile and easy to clean. There are no windows, and the air is constantly filtered so that cleanliness is as close to absolute as possible.

On the second floor of the building are administrative offices and two attractive screening theatres equipped for 35mm and 16mm projection, including interlock, which will be made available to the industry. Security pro-

Processing control equipment assures quality.

tection systems are in effect to satisfy "Top Secret" Government clearance.

Going hand-in-hand with the new facilities of the lab is an extensive training program to develop new skilled people to overcome the personnel shortages which have plagued all labs in recent years.

**Over 300 Experienced People on the Job**

Color Service Company headed by Robert Crane, president, who founded the company with the late Nathan Sobel in 1946, has grown from a one-man operation to over 300 employees at the present time. Sales for 1966 will be in excess of \$7,000,000. Two and a half years ago the company was purchased by Perfect Photo Corp., a large photo-finishing concern, which later acquired United Whelan Corp. Color Service is now a division of United Whelan.

Film producers, distributors, advertisers and agencies will be invited to tour the new premises during the coming months.

Touch of Diamonds Behind  
a Film on Grindstone Tools

The Touch of Diamonds is a dramatic color film tracing the mining operations in the Kimberly Mines of South Africa to the laboratories and manufacturing plants of the Norton Company in Worcester, Massachusetts, where crude diamonds are studied and transformed into precision grinding tools, is the mission of *The Touch of Diamonds*, a new 24-minute color film.

This latest Norton film, made by Bay State Film Productions of Springfield, Mass., under the direction of Milton W. Sebring, manager of audio-visual services at Norton, will be especially useful to vocational and industrial training class groups, to technical and engineering societies and educational groups.

Other Norton personnel contributing to the film included Everett L. Sinclair, manager of product engineering, Abrasive Division, and Charles P. Rice, Jr., staff artist, advertising and public relations department.

Book *The Touch of Diamonds* for group showings via letterhead request to: Norton Company, audio-visual services, advertising and public relations department, Worcester, Mass. 01606.

### "A Tale of Two Tires" Pictures Tests of Rayon vs. Nylon Cord

A new 10-minute color film depicting a series of dramatic tests by noted automotive test driver Tom McCahill, evaluates the difference in directional stability, handling ease and roadability between rayon cord and nylon cord tires. Now available for free loan to interested groups is *A Tale of Two Tires*, sponsored by FMC Corporation's American Viscose Division in Philadelphia, developer of the Dynacor (FM) rayon cord tire.

Driving several different 1966 model cars, both sedans and station wagons through a test course designed to simulate low and high-speed lane changing at the Daytona International Speedway, McCahill matched companion sets of rayon and nylon cord tires in each test sequence for various handling characteristics.

He concludes at the end of the film that cars equipped with rayon cord tires are more easily controlled during fast maneuvering at pike speeds than those riding nylon.

Requests for *A Tale of Two Tires* should be addressed to Mod-

ern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N. Y. 10022.

### Play "The Gardening Game" and Enjoy Those Home Garden Chores

Group viewers can join *The Gardening Game*, via a 22-minute color film with that intriguing title sponsored by the True Temper Corporation. Produced by Dick Roberts Films with the aid of Marjorie Dietz, editor of HOME GARDEN magazine, the film is available for free loan bookings to adult groups, garden clubs, resorts and TV sta-

tions via nationwide facilities of Association Films, Inc.

In the film, George and Beth Rogers are pictured as a talented, charming young couple with a lovely home, but they are utterly defeated by almost anything that grows until their neighbors, Herb and Helen Adams, show them how to play *The Gardening Game* and make landscaping a truly satisfying outdoor sport.

The picture provides helpful ideas for easier, better gardening, shrub and lawn care, is filled with colorful "how to's" and good floral photography.

## HFE Salutes a Favorite Customer

The State of California — Resources Agency

DEPARTMENT OF FISH AND GAME

For many years of creative, constructive use of the film medium, dating back to hand-crank 35mm days, and including such contemporary activity as:

PRODUCTION of four game subjects: *Big-Horn Sheep of Death Valley; California Deer Unlimited; Chukar of California; Upland Game Birds of California* . . . three inland fish subjects: *High Jumpers; Rainbow Hatcheries; Reservoir Fisheries* . . . three oceanic subjects: *Fish in the Sea; Sardines, Disappearing Silver; The Sea Otter* . . . three habitat subjects: *Spawning Streams; Water—Let's Keep It Clean; Water—Let's Use It Wisely* . . . and three general-interest subjects: *The Landowner and the Sportsman; Whys of Fish & Game Laws; and Wildlife for the Future.*

DISTRIBUTION of these fine films, through 10 California libraries to audiences numbering more than 750,000 a year, plus many more who see them on TV and in schools; and to yet others outside the state and abroad.

Films used in hunter-safety programs have been effective in training nearly 400,000 young people in safety principles.

PROVISION of 16mm color-sound and color-silent (with script) "hot news" spot announcements to all 30 California TV stations, reaching an audience of 24 million or more each year.

PROMOTION of film-use through all appropriate media—newspapers, magazines, radio and TV stations, speeches, pamphlets and booklets . . . and doing the whole job on always limited budget which restricts activity to projects which have been demonstrated as providing good returns—and which continue to prove themselves in this way.

*Complete HFE Personalized 16mm Laboratory Service has proved itself important to this customer—and it can be important to you. Try HFE soon, won't you?*

### Six Firms Co-Sponsor Technicolor Travel Film "The Agent's Secret"

What may be the first travel film jointly-sponsored by six companies interested in the travel industry has recently been premiered in New York.

*The Agent's Secret*, which features a fully-developed plot and an impressive array of technical credits, is aimed at theatrical release through a major distributor and 16mm distribution via the public relations and advertising departments of its six sponsors: The Boeing Company, El Al Israel Airlines, Hertz Rent-a-Car, Hilton International, Polaroid, and Pratt & Whitney Aircraft.

The film, which budgeted at \$65,000, has a spoofing spy plot, much in the manner of *Our Man Flint*, or *How to Steal a Million*, and was photographed against some of the great tourist views in England, France, Italy and Israel.

Star of the 35mm, 22-minute Technicolor production is Addison Powell, a well known television and motion picture actor. Director of Photography was Sacha Vierny, whose previous credits include *Last Year at Marienbad* and *Hiroshima Mon Amour*. Director was Alex Goitein, music was composed by Charles Gross and script by Gene Kearney. J. Peter Brunswick, Public Relations Manager of El Al served as executive producer on behalf of the six sponsors.

*Films Show "Patients Are People"*

**Nursing Aides Film Program  
Helps Meet a Critical Need**

**F**ACED WITH A CRITICAL SHORTAGE of trained nursing aides, and thoroughly aware that the problem will become more serious as Medicare brings hospital care to more and more patients, many hospitals and nursing homes have been looking for new and more efficient methods of training.

To meet this need, a new and effective course in approved basic techniques to assure good patient care and comfort has been produced by PRN Films, a group of Philadelphia nursing training and audio-visual specialists. The course, consisting of six 18-minute color motion pictures and associated printed material is being distributed by Modern Marketing Programs, a division of Modern Talking Picture Service, Inc.

**For Orientation and In-Service Training**

Called the *Patients Are People* program, the film series serves as a nucleus for the orientation and in-service training program required by hospital and nursing homes for certification under Medicare. Accompanying the motion pictures are instructors' guides, glossaries for each film, student training manuals, test materials, attendance sheets and diplomas.

The program is designed to give nursing aides and trainees an appreciation of patient psychology; to provide them with an intimate knowledge and understanding of his needs and how to fulfill them efficiently (these include the patient's food, excretory, hygienic and bedding requirements, as well as such routine procedures as checking his temperature, pulse and respiration); to help them realize more fully that *Patients Are People*.

**Available in Either 16 or 8mm Versions**

The program was written and produced to provide the flexibility necessary to keep pace with busy hospital and nursing home schedules. Training sessions can be as short as 18 minutes or expanded to 30 or 40 minutes when time is available.

The six motion pictures are available for rental or lease in conventional 16mm print format for large meetings or in 8mm automatic-load cartridges for small on-floor meetings using the portable Fairchild Mark IV projector, a most convenient tool for this purpose. •

"To Care Enough" is one of six films in this training program designed to orient the nursing aide to health-care teams in nursing homes.

Sixth film in the program deals with the need for accuracy by nurse's aide in observing and recording temperature, pulse and respiration.

**EDITOR'S NOTE:** Flexible in format and highly convenient for hospital and nursing home use, this series of six films for training nursing aides meets a real national need. It is also in the highest tradition of useful a-v communication and we commend it as such.

# ANNOUNCING THE AMPEX VIDEO INSTITUTE:

a 3<sup>1</sup>/<sub>2</sub> day schooling  
to make you at  
home with video tape.

**THE SCHOOL:** A small-size campus has been built at Elk Grove, the home of Ampex, expressly and exclusively to show you how to make the most of the video tape equipment you have bought or are thinking about buying. A full-time staff has been hired strictly for teaching. And this staff teaches practical applications, not theories. No engineering jargon, but simple conversation that you'll understand and appreciate. (In fact, the head of this staff has personally helped to set up television stations from scratch!)

**WHAT YOU LEARN:** The applications of video tape recording and closed circuit TV in your particular field. How to make good video tapes; lighting, cameras and sound tracks; types of cameras, microphones and associated equipment; how simple video recording really is, and how to tape it and replay it. You'll find applications and implications you never before imagined, share ideas and view tapes made by other people in your field, find new ways to save a great amount of time and money.

**WHAT IT COSTS:** If you own an Ampex Video Recorder you get 1/2 days of schooling, all meals and lodging, for \$100. (\$30 if you commute to and from Elk Grove.) For non-owners of Ampex equipment, the cost is \$150. (\$60 for commuters.) Send us this coupon and we'll send you information telling you when, where, and what you can expect from this unique school.

New DuKane super-8 sound projector has both optical, magnetic sound.

### DuKane Corp. Announces Super-8 Optical-Magnetic Sound Projector

The Audio-Visual Division, DuKane Corporation is marketing what the St. Charles, Illinois' company calls "the world's first Super-8 sound motion picture projector capable of reproducing both optical and magnetic sound tracks. The new DuKane projector carries a list price of \$550 and has the following features:

- (1) a completely transistorized sound system;
- (2) automatic threading;
- (3) projection speeds of 24 and 18 frames-per-second (for sound or silent films); stop-action for still pictures or discussion; and
- (4) reverse control.

Screen brightness and color fidelity, the company notes, are assured by a 150-watt quartz iodine lamp of a new design. Super-8 optical sound reproduction is based on a small blue-sensitive silicon solar cell. The machine's sound pick-up system instantly converts the projector from magnetic to optical sound by the flick of a switch.

The DuKane sound projector also features a solid state recording amplifier with automatic volume control circuit. Narration and music or sound effects are easily mixed and balanced simply by listening through the earphone monitor while recording. A tone equalizing switch, separate speaker for

Minute blue-sensitive silicon solar cell (right) makes optical sound track on super-8 possible non-

## NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

effective audience coverage and a public address microphone-input complete the package which combines magnetic sound recording and reproducing capability with Super-8 optical projection.

A new cooling design, independent of the film transport, cools the entire system when the AC plug is connected. For complete technical literature and availabilities through the manufacturer or authorized A-V dealers, write: Audio-Visual Division, DuKane Corporation, St. Charles, Illinois 60174. •

### Small "Electronic Viewfinder" Easily Mounted on Mitchell BNC

An "electronic viewfinder" for the Mitchell BNC camera is available from Gordon Enterprises, North Hollywood, Calif. A small-diameter television camera, mounted adjacent to the conventional Mitchell optical viewfinder, is designed to provide lensman with

Small television camera (at left) provides an electronic viewfinder.

bright image matching that seen by camera's lens.

A specially-designed cam allows for parallax automatically as camera lens is focused and the image is "transmitted" to a monitor mounted above the finder. If desired, monitor image can be led to other monitors or to a videotape recorder. Entire unit can be installed on any BNC Mitchell camera.

Ask Gordon Enterprises, 5362 N. Cahuenga Blvd., North Hollywood, Calif. to send technical data and price.

\* \* \*

### F&B/Ceco Has Exclusive on New Bodkins' Dichroic Filters

Exclusive distribution rights for the "revolutionary" new series of dichroic daylight conversion filters developed by Arthur Bodkins, scientist-inventor in the field of color technology, have been acquired by F&B/Ceco, Inc.

Filters permit film and color television producers to simulate daylight lighting conditions by placing them in front of yellow lights, boosting the Kelvin color temperature to the correct degree. Bodkins' Pyrex glass filters transmit 85% of corrected light available, said to be a much higher percentage than previously attainable by conventional blue filters, lamps or gels.

Under normal operating Kelvin temperatures of 5600-degrees, the filters will not vary with age or heat. This exclusive feat is made possible by a patented process in which high-efficiency interference filters function by reflection instead of by heat absorption.

Dichroic filters may be purchased or rented from most leading dealers and from F&B/Ceco headquarters in New York City and company's branches. •

### Three ColorTran Industrial Film Lighting Kits Are Now Available

Three new ColorTran industrial film lighting kits are now available from the Motion Picture & TV Division, Berkey Technical Corp. They were designed for lensmen who have to operate from a suitcase.

The Industrial Film Quar Lighting Kit is a fully-integrated quartz-iodine light package with studio capabilities. Lights select provide wide flood illumination, plus units for key lighting. Included are 2 Super-80 lights, Multi-Beam 1000's, 2 Cine Queens, 4 Senior Stands with casters and 4 without casters plus Gaffer Grips. Entire kit weighs

ColorTran's industrial film lighting kits contain these handy elements.

130 lbs., packs into 5 compact cases.

Industrial Film Accessory Kit includes Diffusion and Gel Roll Holders for the Cine Queen, Leaf Barndoors for the Super-8 and 2 for the Cine Queen, Sun and Double Scrims for both Super-80 and Cine Queen, Accessory holders and 4 Leaf Barndoors Multi-Beam 1000. One-case weighs 33 lbs.

Industrial Film Cable Kit includes 2 25-foot light distribution cables with duplex box for the Super-8 and four similar cables for Multi-Beam 1000, two 50-foot light distribution cables with duplex box for the Cine Queen; 4 light extension cords measure 25 feet.

Write for brochure: MP & TV Division, Berkey Technical Corp., 1015 Chestnut St., Burbank, California or contact your ColorTran dealer.

\* \* \*

### Handy Color Plastic Container for 8mm Technicolor Cartridge

A very convenient one-piece polypropylene container with hinged lid is now available to store your 8mm technicolor "Insta-film" cartridges. Book-styled container takes either standard or Super-

8mm film loop cartridges and is available in a variety of standard colors for quick identification: red, brown, white, green or black. Customer's specified color will be matched on orders of 1,000 or more. For a free sample container and price list write today to: Torne Films, Inc., 1229 University Ave., Boulder, Colorado 80302. Mention this item in BUSINESS SCREEN.

\* \* \*

**Series 75" 16mm Projector Is Best from Victor Animatograph**  
 The "Series 75" 16mm sound motion picture projectors, now marketed by the Victor Animatograph Corp., a Division of Kalart, Plainville, Conn., have been designed for quick set-up. Snap-out reel arms will 1-2-3 color-coded film threads to make the new Victor projector ready for action in effortless seconds.

The "Series 75" line continues to feature Victor's exclusive film stops which instantly stop the projector if film is damaged. The projector also has a single-drive sprocket which provides for constant speed and uniform tension to eliminate stress or shock to film transport. The line is available with 5 x 7" door-mounted speakers or with separately-cased 12" speaker models are available with either 15-watt or 25-watt amplifier, as desired.

Quick setup, film safety are features of new Series 75 sound projector.

There is also a model available for rear-projection. List prices start at \$620. Write: the Victor Animatograph Corp., Plainville, Conn. 06062 for data.

\* \* \*

**Gordon Provides Solar Eclipse Film Equipment Used by Douglas**

Camera equipment especially adapted to photograph a solar eclipse was furnished by Gordon Enterprises, North Hollywood, Calif., to the Douglas Aircraft Company. Actual filming of the phenomenon took place a few months ago on a 14,000-foot peak in Peruvian mountains of South America.

Equipment used to photograph the eclipse included an Eastman Kodak Cine Special camera with a stop-motion motor, Eclair NPR 16mm camera with an Angenieux 12-240 zoom lens and a Fairchild high-speed 16mm motion picture camera capable of 1,000 frames-per-second action.

Largest single problem was establishing of a proper filter to block out the sun and properly expose the film. Gordon developed a special graduated natural density filter to compensate for the path of the moon in front of the sun, thereby reducing the tremendous change in exposure from the crescent through its totality.

\* \* \*

**Strong Offers Xenon Arc System to Mount on 16mm Arc Projector**

A powerful new Xenon lamp designed for easy mounting on all 16mm projectors presently using carbon arcs and some equipped with an incandescent light source, has been developed by the Strong Electric Corporation. This "Mighty Mite" Xenon arc system is said to maintain steady color uniformity and high-intensity pure daylight white light (6000-degrees K) which is ideal for color film projection. It is available in three wattages: 450, 900 and 1600-watt lamphouses.

# FILM PROCESSING PROBLEMS? METRO/KALVAR OFFERS NO SOLUTION!

No chemical solutions of any kind are used in the new and revolutionary Metro/Kalvar Model 135 Printer-Processor. Top quality, long-wearing prints are dry-processed by heat alone under normal room light. Operating at speeds up to 100 fpm, the Model 135 provides both printing and processing in a single machine pass. Requiring no plumbing, installation of the desk-top Model 135 is practical anywhere. And, with the simplicity of the Metro/Kalvar process, no special operator skills are required.

Say hello to lower print costs, eased deadlines and faster deliveries with the Metro/Kalvar Model 135. B&W FILMSTRIP PRINTS, TEACHING MACHINE PRINTS, WORK PRINTS — 35mm and 16mm — FROM THE SAME MACHINE.

Write today for details on how a Metro/Kalvar program can benefit you!

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

Marketing chief, Walter Mills

### Walter Mills Heads Marketing at the Magnasynce Moviola Corp.

☆ The new marketing manager at Magnasynce Moviola Corporation is Walter H. Mills, appointed to that post by E. W. Harris, vice-president of marketing of the west coast firm. Mills is responsible for all domestic and foreign sales and for the promotion of Magnasynce equipment as well as that of the newly-acquired Moviola Manufacturing Co.

Plant facilities where he is headquartered are at 5539 Riverton Avenue, North Hollywood, California.

\* \* \*

### Edwin Johnson to Niles' Staff as Chicago Account Supervisor

☆ Newly-appointed account supervisor at the Fred A. Niles Communications Centers, Inc., Chicago studios is Edwin E. Johnson. He was formerly associated with the Atlas Film Corp. in that capacity and prior to that served with Ahrens Publishing Co. in space sales.

A Chicagoan, Johnson is married and has five children. At Niles he will work with both corporate accounts and advertising agencies.

\* \* \*

### Talbot to Filmex, New York

☆ Brud Talbot has joined Filmex, Inc., New York, as a producer in the Business Film Division. Previously, Mr. Talbot has produced features independently both in the United States and abroad.

### Kurt Lassen to MPO Productions

☆ Kurt Lassen has joined MPO Productions, Inc., New York, as a producer-writer in the sponsored films division.

He has been an independent producer specializing in educational and industrial motion pictures. His film . . . *not by bread alone*, dealing with Puerto Rican culture, is currently in distribution in the United States and Latin America.

### Fitzpatrick to Direct Animation for Sun Dial Films, New York

The appointment of Paul Fitzpatrick as director of animation for Sun Dial Films, Inc. has been announced by Carl V. Ragsdale, president of the national film company.

Fitzpatrick's career dates back to his work in the Disney Studios in 1938. During World War II he

Animation exec: Paul Fitzpatrick

served with the First Motion Picture Unit of the Army Air Force, based at Culver City, Calif. Since then he has headed art and animation departments for ad agencies and film studios in the East.

\* \* \*

### Sisk to Manage Production for William Matthews Co., Pittsburgh

☆ Now general manager of production for William W. Matthews Co., Pittsburgh, is Louis D. Sisk, formerly with Mode-Art Pictures, Inc. of that city. Sisk was involved in the production and editing of films while at Mode-Art.

He is an Army veteran and formerly attended the University of Pittsburgh. Well known in "barber shop" quartet singing activities, Sisk has served as master of ceremonies in that area.

\* \* \*

### John Roberts Directs Marketing of GAF Photo & Repro Division

John F. Roberts, former manager of four sensitized repro products plants for General Aniline & Film Corporation, has been appointed director of marketing in that company's Photo & Repro Division. He joined GAF in 1946 as a systems analyst at the Binghamton plant, became supervisor of planning in 1947, chief industrial engineer in 1950, production planning manager in 1956 and was operations manager at the Vestal plant in 1959.

### Otis Finley to Eastman Kodak as Education Markets Associate

☆ The former director of the Community Action Program for Rochester and Monroe County, N.Y. has joined Eastman Kodak as a marketing associate to that company's director of Education Markets development. Otis E. Finley won national recognition as associate director of the National Urban League in New York City from 1961 to 1965, prior to coming to Rochester.

In that post he directed the League's national program for education and youth motivation, designed to promote better quality in education for all children and to motivate disadvantaged children and adults toward greater academic and vocational achievement.

He advised Federal, state and local agencies and school systems and has testified before the Congress on education, youth and employment problems. As guidance information specialist in the

Kodak marketer: Otis Finley

League (1951-54), Finley aided in the development of audiovisual and graphic aids for schools, colleges, used to motivate achievement.

A member of the Photographic Society of America, he has served as an assistant medical photographer at the Washington University School of Medicine in St. Louis, after which he became a free-lance photographer carrying out photo-journalism assignments.

Finley was born in Akron, Ohio and completed undergraduate and graduate studies at Springfield College in Massachusetts. He served as a pilot with the U.S. Air Force during World War II and was one of the few Negro pilots of multi-engine bomber planes.

Married to the former Ethel

Williams of St. Louis, he is the father of three sons.

\* \* \*

### Hy Goldman to Head Completion Services for MPO Videotronics

☆ Hy Goldman has been elected vice-president and head of Completion Services at MPO Videotronics, Inc., New York. Mr. Goldman will oversee a staff of more than 20 editing teams consisting of

MPO editing exec: Hy Goldman

supervising editors and their assistants. He will also have management responsibility for MPO's Color Control Department and print services.

\* \* \*

### Name Four to New Sales Posts at Strong Electric Corporation

☆ Expansion of the sales staff at Strong Electric Corp., Toledo, Ohio, has brought four men into key posts of that motion picture and slide projection lamp and equipment firm. Appointments announced by marketing manager Nelson Alexander include:

Tom McGuire, formerly in the industrial electronic sales division of Hillebrand Electronics; James T. Strong, son of the company's founder and head of his own photographic studio for the past 28 years; Gene Schaefer, a nine-year veteran of the company; and Vernon Sydlaske, active in the company's technical department for the past 16 years.

\* \* \*

### Donald Hine to Bonded Service as V. P. for Sales and Marketing

☆ Chester M. Ross, president of Bonded Services, has announced the appointment of Donald Hine as vice-president for sales and marketing of the Manhattan-based film/tape services company. He will also be responsible for these duties for the company's branches in Chicago, Los Angeles and Toronto as well as for Bonded's proposed international facilities.

Cameraman John Stephens checks camera's microwave antenna before filming 65mm sequences on the baked curves of Italy's Grand Prix racing course. (See the story.)

**Electronic/Optical Innovations Capture Thrills in "Grand Prix"**

Theater audiences who see the current MGM-Cinerama release, *Grand Prix*, are viewing some of the most exciting auto racing sequences ever filmed. And well they should be, for techniques from television, motion picture photography and micro-wave radio were combined to create these scenes. Electronic/optical devices furnished and connected for remote control capabilities by Gordon Enterprises made the scenes possible. Gordon's Grant Loucks devised a dual, remotely operative, motion picture film system which was commanded by a single portable radio control unit.

Coupling of closed-circuit television with remotely controlled 6mm Panavision cameras enabled second unit cameraman John Stephens to guide and control camera movement by operating the Peleo camera head. He attained desired action shots viewed through his Sony television monitor at speeds up to 160 miles per hour.

Further camera mobility was gained through camera tilting, following the Formula 1 racing cars

Stephens, with monitor and camera controls, in Ford G. T. camera car in which Gordon "Formula 1" video system helped get thrilling shots

around the track with close-ups of the drivers, all lensed from a Ford G. T. camera car traveling beside the racing vehicles at from 135 to 160 mph. It all added up to real visual excitement for viewers of *Grand Prix*.

\* \* \*

**Sterling Movies Opens Library, Operations Center on Long Island**  
Sterling Movies, Inc., has opened an operations center and film library in Hicksville, Long Island. This move was inspired by a rapid growth in the use of free-loan films by various industries, schools, churches and clubs throughout Long Island.

Mel Schreiberman, manager of the Hicksville office, said that due to the library's convenient location near the center of the island, films can be picked up one day and returned the next.

An important part of the Hicksville operation is their service to employee lunch-hour film programs.

## How to Protect Those TV Film Prints

**H**IRE ARE SOME BASIC POINTERS in handling film prints for television, drawn from the considerable experience of and testing by staff experts of the Eastman Kodak Company. Nearly every point raised here will also apply to your projection of 8mm and 16mm color prints on all types of projectors now in the field.\*

☆ All mechanical film handling equipment (projectors, editing gear, etc.) should be properly designed for the purpose and maintained in tip-top condition.

☆ Dirt, emulsion particles, air-borne dust, etc., all-too-easily builds up in projector gates, on rollers, or at any point along the film path. Projectors, telecine equipment, etc., used with color prints should be cleaned regularly. Avoid scratching metal parts which may, in turn, scratch prints.

☆ Interestingly, a brand-new (or "green") print must be handled with *particular* care—an important point to remember in "rush" jobs in color TV. Particularly where there's high relative humidity present, a "green" print—unless properly lubricated with a dilute wax solution—can deposit color emulsion on a warm projector gate. Thus, the film may "stick" and even be torn by the high pull-down forces.

☆ Never handle color prints (or any film prints, for that matter) with bare hands. Projectionists, editors, etc., should wear lintless cotton gloves and avoid touching the image area of the film. Film may be cleaned by drawing it slowly through a soft, lintless cloth moistened with a recommended film cleaner such as inhibited methyl chloroform. It also may be cleaned and lubricated in one operation if the cleaning solution contains a lubricant such as beeswax of PETetrastearate.

☆ Stations purchasing color prints in "library deals" (in which prints do not return to the distributor or service company after each play, but remain with the station for as long as five years or more) should exercise special care in storing their color properties. The dyes in today's color emulsions are as stable as science can make them. However, a combination of high temperatures and high humidity can do real damage to the "color balance" of the three basic dyes and produce fading. Color prints should be stored in *cool* (below 80° F., and below 50° F. for really extended life) and *dry* (a relative humidity of about 40%) areas, with dust, gases, stray radioactivity, etc., avoided.

☆ Splicing film is an everyday event in TV. Stations splice commercials into feature films and programs, often re-edit movies for more or fewer commercial break points, or for varying length, than did the previous station colorcasting a film print. Good "ground rules" for splicing *are* available.\*\* Always make good splices; they're worth money in the bank.

☆ Replacement color prints are expensive. Take-up reels, relatively, are not. The take-up reel used with a color film print in TV should always be at least as large as the reel on which the film print was shipped. Bent, sprung, nicked or burred reels should be discarded or repaired before use at a station, ad agency, client office, station rep firm, film projection room, etc.

☆ Rewinding color prints, after projection, is easy—but it's also easy to damage a color print during this process. A common error: rewinding a print at high speed, then permitting it to "coast" for a while; then, more high speed winding, another "coast," and so on. Usual result: a "loose" reel, which may cause anything from cinch marks on the emulsion to providing an inviting air space between loops on the reel into which dirt particles easily work their way to produce scratches. Rewinding should be smooth.

\*Reprinted from TV Film Trends, Vol. VII, No. 6 published by Eastman Kodak.  
\*\*Eastman Kodak Company will be happy to provide readers with a set. Ask for Kodak Pamphlets Nos. H-2 and D-23 on your letterhead to this address: Motion Picture and Education Markets Division, Eastman Kodak Company, 200 Park Avenue, New York, N. Y. 10017.

## THE EDITORIAL VIEWPOINT:

(CONTINUED FROM THE PRECEDING PAGE 18)

"Points to Ponder" for A-V Executives from  
Bob Unrath of Port of New York Authority

In these pages last year, we told you about that wonderful sabbatical awarded Robert F. Unrath of the New York Port Authority for intensive study of a-v communications tools and techniques in the U. S. and abroad. A member of the Industrial Audio-Visual Association, Bob summed up some of his observations to that group at its annual fall meeting in North Carolina. Here are some of his "points to ponder" from that presentation:

1. Audiovisuals are a medium of change — the alert A-V man is busy keeping up to date on new hardware and techniques. Read the trade publications. Visit with your contemporaries and exchange information and ideas.
2. Be different. Experiment. Don't be afraid to make a mistake. The biggest mistake of all is to do nothing or the same thing all the time. Try the unusual.
3. Study your competition — look at their audiovisuals. See how they present their story — make your own evaluation. Then apply this evaluation to your own audiovisual productions.
4. Be interested in what's going on in audiovisuals outside of the U. S. Even if you are not engaged in foreign marketing you can't help but learn some exciting new and unusual things about audiovisuals.

5. Great opportunities exist for the a-v executive to assume an important role in helping shape the corporate image. Study your own organization, determine areas where audiovisuals can help. Then recommend a program or a plan of action to your management.

6. If you haven't investigated the use of closed-circuit video systems, you should do so. See demonstrations. Ask questions. Talk to others who are using CCTV equipment in their plants and offices.

7. Investigate the possible use of your films in theaters and on television. If you can keep them "soft sell" and educational in content, you may be successful in reaching these very large potential audiences.

8. If you are planning an audiovisual program for schools, think big! Prepare complete packaged programs, including printed teacher's guides, source material, copies of the film script and budget a sufficient number of prints.

9. Good subjects for new films, slide stories, etc. are staring you in the face. If you really want to produce audiovisuals, keep suggesting subjects to your management.

And we have to add a very important 10th point to Bob's excellent summation: "Cap" Palmer's often-repeated admonishment, expressed vigorously at an earlier IAVA annual meeting: *show films as often as possible to management groups in your company.* If you hear about a picture on a subject of importance to any specific area of corporate interest, *get a print and then make a date to show to the man or men who ought to know what's going on!*

*Show the medium to sell the medium.*

*A Name  
with a Purpose*

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

## Films Available for Sales Training Groups

To supplement our Film Guide Library publications, the Editors bring you additional listings of available motion pictures and sound slidefilms available for rental or purchase from the sources noted. These titles are for marketing and sales training groups; all motion pictures are sound subjects.

### MOTION PICTURES

**The Customer and You — Two Way Communication.** (25 min) Source: (U.S.) United World Films; (Britain) The Rank Film Library.

• Relates directly to salesman's job and how to sell, provides insight into European selling methods. Issued with meeting guide, action is divided into five basic operations. Teaching points are illustrated by a number of different examples selected to cover most sales situations.

\* \* \*

**How to Make an Effective Sales Presentation** (30 min) b/w. Purchase: Dartnell Corporation. \$290 plus postage. Rental: \$1.00 per person each showing, \$40.00 minimum each showing plus postage both ways.

• Modern version of this "classic" sales-training film. Borden & Busse demonstrate four key steps which are essential in making an effective sales presentation. Kit includes meeting guide and supplementary "pass-out" booklet.

\* \* \*

**How to Prevent Objections in Selling** (30 min) b/w. Purchase: Dartnell. \$290 plus postage. Rental: \$1.00 per person each showing; \$40.00 minimum each showing plus postage both ways.

• Film highlights common faults which cause salesmen to lose the order before they even get "close to closing." Featuring Borden & Busse. Kit includes meeting guide and supplementary "passout" booklet.

**How to Select Salesmen Who Can and Will Sell** (30 min) b/w. Purchase: Dartnell. \$290 plus postage. Rental: Flat rate of \$100 per showing plus postage both ways.

• Purpose of film is to give executives responsible for selecting salesmen specific advice, techniques and procedures they can use to reduce expensive mistakes of judgment in selecting salesmen. Includes leader's guide with sample forms.

\* \* \*

**How to Succeed in the People Business** (16 min) b/w. Purchase: Dartnell. \$290 plus postage. Rental: \$1.00 per person each showing, \$40.00 minimum, plus postage.

• Dramatizes five keys to better customer relations. For employees who must deal with the public. Featuring Dr. Joyce Brothers. Kit includes meeting guide and supplementary booklets.

\* \* \*

### RETAIL FILM SERIES

**People Sell People**, retail sales training program. (6½ to 8½ min) color. Purchase: Modern Talking Picture Service. \$350. One month rental: \$150.

• **Unit 1: You've Sold Me, Mrs. Marlowe** presents the total concept of a successful sale, introduces philosophy behind the program. **Unit 2: Nothing but Lookers** emphasizes the positive effect of a helpful person-to-person relationship with the customer in successful selling. **Unit 3: The Sales Building Role**, presents the second condition of a successful

sale: satisfying the customer's wants. **Unit 4: Goodwill Ambassadors**, deals with the concept of personalized service as the prime motivator of customer loyalty and continuing patronage. Program includes manual and meeting plans, take-away pamphlets and study guides.

\* \* \*

**Sam's Secret** (10 min) color. Purchase: Dartnell. \$220. Rental: \$25 per day, \$50 per week, \$100 per month plus postage.

• Through the use of stylized animation and humor, presents the traditional points of salesmanship: prepare, promise benefits, prove your claims, picture benefits, push for action.

\* \* \*

**The Salesman isn't Dead — He's Different** (21 min). Purchase: Dynamic Films, Inc. \$125. Short term loans to firms, trade groups, etc.: Fortune Magazine.

• Shows what today's successful salesman does and how he does it; the responsibilities involved and the benefits he derives. The change in salesmen from stereotyped characterizations of the past to the modern representative of his company in action is portrayed.

\* \* \*

**What it Takes to be a Real Salesman** (30 min) b/w. Purchase: Dartnell. \$290 plus postage. Rental: \$1.00 per person each showing, \$40 minimum each showing plus postage both ways.

• Dr. Norman Vincent Peale shows salesmen how to develop the right attitude, how to overcome discouragement and frustration, how to meet every day problems with confidence and faith. Includes meeting guide and supplementary material.

\* \* \*

### SOUND SLIDEFILMS

**How to Succeed in Banking**, series of 5. Color. Purchase: Better Selling Bureau.

• Used in conjunction with ten 30 minute sessions. Five workshop meetings provide opportunity for review of filmstrip meetings and discussion of problems relating to daily work in the bank. Titles are: **What Do You Call It; Who Benefits Most; What Will It Do For Me?; Are People Different; Is It Worth While?** All stress the nature of "selling" on which most business and personal success depend; the value of courtesy; how to present benefits; who profits by "selling"; what every customer wants to know; how customer type differ, etc.

\* \* \*

**University of Marketing**, series. Color. Purchase or Rental: Better Selling Bureau.

• Six meetings, divided between filmstrips, recorded instruction and discussion. Techniques of top earners, combined with theories; include power of productive planning; the

way to make big achievements by taking small steps; the immediate versus the far goal, etc.

\* \* \*
